27,565. Then, of course, there comes a further question which I do not understand. If current papers running on in a case like Hayti are kept in each department, how can you bind the papers in the register, because some of these papers are kept back in the cases?—They are bound as cases when made over at the end of the year, if the cases are finished; they are not inserted in the volumes.

27,566. They are bound according to subject and not to number?—Yes.

27,567. (*Mr. Freeman-Mitford.*) Would any reference be made to that in the bound book?—A note would be put in the register—such-and-such a subject; "Case." As I have said, they are all bound together as cases.

27,568. (*Mr. Cleghorn.*) Although they are of different years?—Yes, although extending over some years.

27,569. (*Chairman.*) I think you told us that you prepare a précis of papers. Is that simply where references of the same kind are made to you?—Take a case that occurred only two or three days ago. A question arose about the church at Copenhagen. An application was made to know whether the minister might act as trustee for the church. They sent down to the library to know what was the history of the establishment of the church at Copenhagen. It would be the duty of one gentleman in my department to look through the indexes and the registers, perhaps extending over 20 years, to give the origin and the foundation of that church, and to show what had transpired since; he would then give an abstract of the correspondence, winding up by drawing the Secretary of State's attention to the fact that in 1873 Her Majesty's Government withdrew from all responsibility in connexion with most of the British Church Establishments abroad. It would be his duty to point that out also.

27,570. (*Lord Lingen.*) Have you seen the working of the register or paper room in any other department except your own?—No, I have not. Some years ago I wrote to different departments and asked them what their system was. I found they differed so widely from the Foreign Office arrangement that I could not make such an abstract of them as I thought would be applicable for the Foreign Office.

27,571. I think I understand from your evidence that when a letter comes in in the morning there is no general register of the whole Foreign Office correspondence?—Certainly not.

27,572. None?—None.

27,573. You are aware that in most of the other departments, the Treasury certainly, and such other departments as I have been acquainted with, there is one general register into which every letter passes in the morning; it is then stamped, and becomes a matter of record, with its date, whom it comes from, and, in the fewest possible words, what it is about, is entered into a book. That is done day by day. In that stage it goes into the paper room, as it is called. The head clerk in that room does not prepare a *précis* upon it, but he refers to his own indexes, and he ties up all the papers he thinks relevant. In that form it goes down into the department to be dealt with. The head of that department, if he wants more papers, or finds any missing, sends for them. Now, as I understand it, in the Foreign Office, if a matter of any very great importance comes in, it is not the original documents that are sent down to the department, but you prepare a *précis*?—Yes, if it relates to past events and the papers are in my custody.

27,574. And upon that *précis* the political clerks and the minister at last proceeds to act?—Yes, to a certain extent.

27,575. In point of fact, you, in your department, are responsible for the statement of the case on which the political part of the Foreign Office acts?—That is, supposing they are carried back for some years. If the question was of a current nature, the department would supply the memorandum and the papers themselves to the Secretary of State, because very recent papers are not in my custody.

27,576. It would not come into the library at all?—Not at all. If any questions arise this year, anything, as I say, about Hayti, or anything of that kind, the department would have the correspondence of 1888 and 1889, and they would send up to the Secretary of State such of those papers as they might think material to the question. They would not send up all the papers upon the subject.

27,577. They would send up all the original documents?—They would send up some of the original documents.

27,578. With reference to these memoranda of cases like the Corea, which take a considerable time to prepare, do you in the margin of them put any reference to the original papers?—Invariably.

27,579. So that if the Secretary of State wanted to see the original documents of one of your memoranda, he could immediately send for it?—Immediately. I make it an invariable rule.

27,580. Of course in one of those long memoranda you yourself cannot go, as a rule, hunting into the pigeon-holes; the searching of the registers, and the getting hold of papers must be done by the clerks in your own department under your own direction?—Yes, certainly.

27,581. These cases are of the very utmost importance, on which peace or war may depend, and all sorts of commercial things of importance; would not you say that the making up of these memoranda is about as responsible work as one can think of, highly responsible?—I have always thought so.

27,582. Then you have got a class of clerks, apparently, in the librarian's department, who assist you, who are on a very different scale of prospects and promotion to those in the political department, is not that so?—That is so.

27,583. What do you think of that arrangement?—The clerks of the librarian's department have always felt that as a grievance, and have thought that they ought to be better paid.

27,584. What would you say to this proposal that the young gentlemen in the political department should of necessity in their earlier years pass through your department and become familiar with the records that are in it, and how these memoranda are composed and made up?—It would be very useful to them, no doubt, they would gain an immense amount of knowledge by it; but they would be a little *de trop* in the department, because we should have to teach them their duty, and when they had gained their knowledge they would leave us and take it away from us. It would be a great advantage to them, but I do not think it would be a benefit to the service. I would rather retain the gentlemen who have learned the work.

27,585. I can quite understand that it would not add to the comforts of the librarian's department; but, still, if they were not in too great numbers, what would you say? You have got about 10 clerks, I think, on your establishment; if one or two of those were intelligent young gentlemen brought in, and even if they left you at the end of a couple of years that would not disorganize your department at all, would it?—Not at all, we could give them work to do, I have no doubt.

27,586. Then to go a step further, do you acquiesce in the fact that the clerks in your department should be kept there, or do you think that the best of them and those who have shown themselves competent might with advantage pass into the political department?—I think it is very desirable that my department should

Sir E. Hertslet, C.B.
12 Dec. 1889.

be distinct. The only thing I am anxious about is that the appellation of "librarian's department" should be removed. I have always felt it a stigma, so to speak, because one has never got credit for one's work. I know that the question has been asked in the House of Commons, why there were two librarians in the Foreign Office? (which was not the case) and the answer has been, because they have got to look after so many books; and that has been considered a satisfactory answer in the House of Commons. Again, it has been stated in the House of Commons, more than once, that the librarian does not draw up reports unless they are more than 15 years old. That rule has never been generally acted upon since I have been in the office, and Lord Hammond admitted in the House of Commons that, although this rule was in existence it was not acted upon.

27,587. The object of that remark, I presume, was to show that the library was, to that extent, only a department of registration and record, and not of action, as you may say?—Yes, I presume so.

27,588. That was the inference intended to be drawn?—The idea was that it would be beneficial, I think, to the office if the political departments were to draw up their own memoranda extending over a longer period than two years. My feeling in the matter has always been this: that the duty of searching for information and furnishing it, should fall upon the library. Go back to the question of Corea; supposing that the political department were to draw up the papers about Corea, I should have to suggest where to look for the information, I should have to mark the printed books, I should have to mark the correspondence, and to mark down in pencil the passages which relate to a particular subject. I should then have to send up a mass of books to the department. The duty of preparing the memorandum would then be a very simple one; indeed it would be simply making an abstract of papers for which somebody else has provided the information; and the responsibility of the gentleman drawing up that memorandum would be nil, because he would say, I merely drew up the papers from the information given to me. My idea has always been that this system of drawing up memoranda in the library has acted admirably. There is not a prime minister or secretary of state for the last 50 years to my certain knowledge who has not admitted it to be a most admirable system. I think that it is a system which ought to be perpetuated, because it has worked so well that it has grown up in the office and forms part of it; in fact, it has been admitted that the library now is the pivot upon which the whole machinery of the Foreign Office turns. I stated to Lord Rosebery, when he was Secretary of State: "I say, my Lord, "most humbly, unless you look into this question of the "registration, the whole of this Foreign Office will stop, "because of the impossibility in future of preparing "these memoranda. If questions are asked by the Secre- "tary of State at present, he refers to those who have "had long experience in the Foreign Office. There are "others that have had long experience besides myself "in my department. With such experience one can "tell by inspiration where to go for information, but "when the time comes for those gentlemen to retire" —one of them retired the other day, taking 50 years' experience with him, another will retire in the course of a few months, my turn must come to an end before long,- "then," I said to Lord Rosebery, "when those "gentlemen who have this knowledge retire where "will you go to for your information. You will "naturally say 'to your registers and indexes.' But "how will you feel when you are told that these "registers and indexes are not kept up; then what "will become of the Foreign Office."

27,589. This is, of course, subject to any difference in degree, true of every office whatever, that its paper room containing its past records of its business by people deceased and by people who survive from one generation to another, has to keep up its continuity. I do not see my way to stating that as a difference in point which relates to the Foreign Office. I will just ask you now this question on the memoranda. Do many of the difficult ones that you have to prepare yourself or to superintend in the course of the year run back further, we will say, than 30 years?—Some do.

27,590. Have you often to get papers over 30 years?—Yes, certainly; sometimes even over 40 years. We have to send occasionally to the State Paper Office for the papers which are preserved there. We should refer to those papers much more frequently if they were still under our roof. I parted with them with great regret.

27,591. By State Paper Office, do you mean the Public Record Office?—Yes.

27,592. On what system do you send papers to the Public Record Office?—Every three years we make a transmission of about 3,000 volumes.

27,593. Going to the oldest ones?—Up to 1847, inclusive, the papers are at the Record Office. All papers since that date are at the Foreign Office. A couple of years hence, when the correspondence and the more modern papers are bound, we shall make a transmission, perhaps, of two or three thousand volumes, so that there is a continual move going on.

27,594. I should like to come, while we are upon that point, to the question of destroying papers. There is an Act of Parliament of about 15 or 16 years ago authorising the destruction of old papers. Have you looked at the machinery that has been adopted in other departments in consequence on that subject?—Yes, I have seen it.

27,595. Perhaps you are not aware, or you may be, that that Act was passed in consequence of many departments, like the revenue departments, and like the War Office and Admiralty absolutely threatening to outgrow any buildings that could be prepared to hold the waggon loads of papers, such as regimental and other returns that came. In order to meet that, an Act was passed authorising the destruction of papers. In all those departments now they destroy the papers which they do not think it necessary to preserve before they send the residue to the Register Office. Your view is, that that system would be a dangerous one to adopt in the Foreign Office, as I gather from your evidence?—I think it would, for this reason, that our volumes are all bound, and you can only make a distinction between valuable papers and unimportant papers by breaking up those bound volumes.

27,596. Now, let us come to the point. Before you bind them, these papers do not go for binding till they come out of the departments to you. A paper is not bound until it is three years old, is it?—Two or three.

27,597. Is it bound at the end of two years?—Yes.

27,598. Of course, I admit you must keep all papers much longer than two years, but do you think it is necessary to bind so rapidly as that?—I think it is very important that we should have them bound, because papers get lost, we consider, if they are not bound. It is a very advantageous system, I think, binding them as rapidly as possible, and the only thing I have objected to is the bookbinder not getting on quite quick enough.

27,599. When they are bound, are they bound in order of date?—They are bound in order of country and date.

27,600. To bind a volume on which you have to mark a dozen papers is a very unhandy form of reference. In the offices that I know of there are pigeon holes without end, and the most careful indexes to all the papers which are put away in those pigeon holes in order of date. You may have to go to 20 pigeon holes to make up the materials of a reference, but in that way the separate papers are a very great convenience for daily business?—We obviate that now by binding them up in cases as much as possible. I am quite willing to admit that there are many papers which can be destroyed, papers, for instance, in the shape of trade reports, returns of fees, leave of absence, and that sort of thing; but I think they ought to be destroyed by the department which has had the manipulation of them, and has done with them, instead of sending them down in sacks to the library and expecting some junior to discriminate between what he considers a valuable paper and a useless one, and what may be destroyed and what may not. I think it ought not to come to us but that the man who has dealt with the paper and has put it into print should decide whether the manuscript is no longer of any use; then I see no harm whatever in his destroying it.

27,601. Of course I do not contemplate any sudden revolution in so great a system as that of the library of the Foreign Office. I am more anxious to get your long experience as to the possibility of some change. Suppose, for instance, papers, instead of being bound at the end of two years were bound at the end of, we will say, 30 or 25 years, and that in the meantime they were kept as separate papers, as they are in other departments, and carefully indexed and put in pigeon holes. The system that I am familiar with goes upon these lines: we keep papers in the Treasury for 25 years.

Certain classes of papers we keep for ever, but those are extremely few. At the end of the 25 years there is a classification drawn up of perhaps 20 heads. If a paper falls under those heads and is over 25 years of age it is destroyed. The head of the paper room, or one of his most responsible officers, has this list before him of categories of papers. He looks over the year which is passing out of date; he has only one year to deal with at a time, when you once set the system going. Each of the papers that are 26 years old, at his leisure he goes over, taking them down from the pigeon holes with the 20 categories of papers before him. The result of that is this: it was at work for some years in the Treasury when I was there, with no sign of harm to anybody. Two thirds of the papers were destroyed, and it was only the other third that passed into the register office. We kept a book, and every single paper that had gone through our hands was marked down, whether it was destroyed or not. We kept all the daily registers, and therefore we could find in that way whether any paper had been received. As time goes on, it seems to me that the present Foreign Office system threatens a most dreadful bulk, if you have 75,000 manuscript and 85,000 printed volumes, as I understood you to say?—Yes, those are the numbers.

27,602. How many volumes, do you think, are there in your library, since 1847, of Foreign Office papers?—There are now about 23,000 volumes of papers.

27,603. Of papers?—Yes, bound volumes of manuscripts.

27,604. Are you at all pinched for room, even in your new buildings?—Yes, we are.

27,605. So that, supposing for a moment you could diminish those papers by half or a third, it would give you a much longer lease of your buildings being sufficient?—It would, but of course I am naturally prejudiced in favour of the old system, and I should also very much dislike the responsibility of saying what papers should be destroyed and what should not. I have very often found that papers which I have thought were unimportant have turned out to be very important.

27,606. At as great a distance as 30 years?—I think so. Questions have been asked whether people's names appear in earlier papers. Some Russian Jew, for instance, may be inquired about; and the question may be asked: "Has this man ever written to the Foreign "Office before; or is anything known of his career?" We turn to the papers and find there a letter giving the whole account of it.

27,607. Taking the mere chances of human life, if a man has not been heard of for 30 years, it must be rather unlikely that you would hear of him again?—Well, perhaps so, but cases of the kind do occur.

27,608. Referring to the system I have described, I am afraid you are not very likely to be called upon to carry out any part of it more than this: Supposing the Secretary of State were to say to you "I think we "ought to contemplate the destruction of papers after, "we will say, 30 years;" could you draw up heads under which, if papers fell, you think they might be safely destroyed by a responsible clerk. He would use his own common sense if he thought there was anything exceptional in them, but do not you think you could draw up 20 or 30 heads under which, if a paper 30 years old fell, it might, without loss to anybody, be destroyed. I do not say that a case might not arise some day or other in which that particular paper might be wanted, but that the convenience would greatly outbalance any likely inconvenience?—It stands to reason there must be a great many papers which are of no permanent value.

27,609. I will not press that point further. I will go now to one other point which you mentioned, the binding of your papers, and the very great delay and difficulty which occurs to yourself from the long time that has to be taken in the binding, was not that what you said?—I was thinking of their not being brought upstairs. They remain in an unfinished state in the bookbinders' room, but they are all numbered, every book is numbered, so that we can get access to it; we can send to him for the book, and, being on the premises, it is always forthcoming. It does not take him so long to sew them, as he calls it, as it does to bind them.

27,610. Is there any serious practical difficulty?—No difficulty has arisen, except that we should like to have them put in our own room.

27,611. They are down in his room until the binding is finished?—Yes.

27,612. And he goes on with them when he can?—Yes, he binds on the premises, and therefore, he is always available.

27,613. I am aware from having to preserve these papers, and from their being of all sorts and sizes, that the binding is a work of art; it is also a work, I think you hold it naturally and rightly, of a very confidential character?—Yes.

27,614. Would not the delay in getting these volumes finished be met if they were sent out of the Foreign Office to a great binder who had a large staff?—Yes, if you could trust him.

27,615. If you could trust him?—Certainly.

27,616. Have you ever given your attention to whether it would not be possible to make such terms with some large binder that he should have a confidential department, and should be able to do this work much more rapidly than it is done in the Foreign Office?—No; such a suggestion has never been made, and I should be sorry to make it.

27,617. Your memoranda are printed in the Foreign Office. Is all the printing that you do for the department so done in the office, or is any part of it sent out?—The parliamentary printing is sent out, but it is done by the same printer.

27,618. But your departmental printing is actually done within your own doors, is it not?—It is actually done under our own roof. There is a staff of printers under Mr. Harrison, and they print all the confidential papers on the premises, but in reference to the parliamentary work, when the confidential printing is revised and run over, to be laid before Parliament, the forms are then sent up to St. Martin's Lane, and there the printing takes place. All the parliamentary printing is done out of doors, but the confidential printing is all done under the roof of the building.

27,619. In that respect again the Foreign Office differs from other offices where exceedingly confidential printing has to be printed unofficially?—Yes.

27,620. Is the printing in the Foreign Office—one of your own long memoranda—done with adequate dispatch, or is there delay in it?—It is done with great despatch.

27,621. (*Mr. Cleghorn.*) There seems to be only one printer and one reader in your printing establishment, according to the estimates?—I think there are as many as 50 men; it is a permanent establishment.

27,622. Their payment comes under some other head?—Yes. They are paid by Mr. Harrison.

27,623. As I understood you, you have 75,000 manuscript papers every year?—Yes.

27,624. Into how many bound volumes do you compress those?—Between 700 and 800.

27,625. So that there are 700 to 800 volumes added to the library every year?—Yes.

27,626. Amongst those 75,000 papers are included, I take it, everything that comes from abroad to the Foreign Office, including ambassador's despatches and consular despatches; there must be a great many consisting only of a single sheet of paper, and of very little importance; the bulk is very large, 75,000, but a comparatively small number of those will be of permanent importance?—A very considerable majority are, because it must be remembered that they consist of despatches from every ambassador and minister in every part of the world, as well as from every consul. There is a consular series, a commercial series, an African series, and a treaty series, besides the diplomatic. Then there are the letters to and from Foreign Ambassadors and Ministers, and those which are addressed by private individuals to the Secretary of State bearing upon the subject of any particular country, and it would be very dangerous to destroy letters of that kind, I think, as they are the foundation of claims against foreign Governments for ill-treatment and so forth. Many letters sent to the Foreign Office contain a grievance of some kind, and they are very often of long standing. I may mention a fact that just occurs to me. Some years ago, when a treaty was signed with America with regard to claims, it was agreed that all claims which had been brought by one country against the other from 1814 to 1853 should be examined by a mixed Commission. The Americans brought forward a very large number. By the examination of

Sir E. Hertslet, C.B.

12 Dec. 1889.

our papers and our registers we were able to produce more than 70 folio volumes of letters which had been addressed to the Foreign Office by claimants who had grievances against the United States, and our claims were put against theirs, and there was a give and take. If all those papers had been destroyed not one of those claims would ever have been brought forward before the Commission. That may be considered an exceptional case, but it shows the advantage of not destroying without due care and consideration papers however unimportant they may appear to be. When the papers are once bound up (which appears to me to be the safest plan) they are put upon shelves, and it is merely a question of space, and where they are indexed you can refer to any subject and to any name and the paper is at once forthcoming; whereas, if papers are simply entered into a daily register and, as Lord Lingen was suggesting, they should be afterwards destroyed, there only being a record in the register that the paper had been received but not of what had become of it; then if it was wanted, well, the librarian would be blamed, I suppose, for not being able to produce it. Where papers have been destroyed, every entry in the register would have to be gone over and marked against it, "destroyed," "destroyed," "destroyed." I think it is by far the safest plan to preserve the papers, at any rate, it is my experience of half a century that most unexpected papers are sometimes called for, and the readiness with which they are produced has been a great saving of public time and a great convenience.

27,627. Has each volume an index of contents prefixed to it?—No, there is no table of contents. The contents of the volume are entered in the register, and that register is indexed, so that the difference between our register and the departmental register is this, that we give a fuller description of each paper, and refer to the bound volume; so that when information is sought for you go first to the index then to the register, and you then take down the bound volume which contains the paper. We have found the system of loose papers very inconvenient.

27,628. Then, as I understood, you transfer papers to the Public Record Office periodically?—About every three years we make a transmission.

27,629. Of about probably 2,000 or 3,000 volumes?—About 3,000 volumes at a time.

27,630. How long are they kept there?—For all time.

27,631. How long do the papers in the Public Record Office go back?—They go very far back. That reminds me of another of the duties of my department. Applications are being perpetually made by historians and others to have access to our earlier papers. I have got at this moment on my table a request to see the papers of 1760. We not only correspond with the Record Office whenever any stranger wishes to have access to these papers, but they are only allowed to publish the papers after they have been looked at by the Foreign Office to see whether any objection exists; and it is the duty of my department to look over those papers to see whether there is any objection to their publication.

27,632 (*Lord Lingen.*) You mentioned a very useful work that your department had done, in binding and indexing the law officers' reports?—Yes.

27,633. You began that, I believe, in 1861?—Yes; there is one volume previously to that, which contains all the law officer's reports relating to the Crimean War, from 1853 to 1856.

27,634. Then, practically, you have got their reports for the last 28 years?—Yes.

27,635. You have also got in your volumes, I presume, their reports before 1861, in an unbound and unindexed state?—Yes, certainly.

27,636. Do you find that you have to refer, as a matter of fact, to any law officers' opinion earlier than 1861?—Certainly.

27,637. You have?—Yes.

27,638. So that, at any rate, if you were forming categories of destruction, you would exempt the law officers' opinions entirely from destruction?—Before 1861, and since?

27,639. I understand you to say that you began to bind and to index these reports in 1861. What I was aiming at, was to get your opinion upon this point; having fixed 1861, that is, 28 years back, as the practical limit within which you have made those reports available, have you found that that limit would have been very inconvenient if it had been the limit of destruction instead of the limit of binding. Have I made myself clear? Supposing you had got no law officers' reports before 1861, should you have been put to any great practical inconvenience?—Yes; we should very much prefer that they should have been printed and bound before 1861.

27,640. It is not quite an answer to my question to say that you would have preferred it. Have you been put to any practical inconvenience from those earlier reports not being in so available and convenient a form?—No very great inconvenience, because we have been able to find them out from our indexes; but still, since the law officers' reports have been bound, we have a general index in which all subjects, for instance, such as foreign jurisdiction, are referred to, and that only goes back to 1861. Now it would have been a very great convenience to us if we could also refer to the reports which have been made by the law officers on the same subject, previous to 1861.

27,641. Have you had, as a matter of fact, any considerable number of cases in which you have to refer to earlier reports than 1861?—We do have to refer very often.

27,642. Very often?—Yes.

27,643. Could you give us in one sum the annual cost of your department?—The Foreign Office list would show it. There is one statement I should like to make here, and that is, in the estimates laid before Parliament my department is given credit for two second-class clerks which do not belong to it, and never have belonged to it, and I believe, never will belong to it; therefore we are credited with having two more men than we really have.

27,644. In the estimates you are charged with four second-class clerks?—We have only two.

27,645. (*Chairman.*) There is a foot-note stating that they are otherwise employed?—Yes. I have always thought it is rather unfair to my department that I should have credit for them at all. They have never belonged to my department, they have never passed a competitive examination before the Civil Service Commissioners as my men have done, and they are merely tacked on, I do not know why. I was not asked and, as I have said, I have always thought it a little hard on my department that I should have the credit of those two gentlemen, when I have not got them.

27,646. (*Mr. Lawson.*) I should like to ask you whether you keep covering letters and bind them with the other papers?—We have very few papers of that nature.

27,647. I have often seen in parliamentary returns a paper sent to the Foreign Office enclosing a report from consuls in different parts of the country to which the minister or ambassador is accredited. Would you put those in the bound volumes?—Yes, everything would be kept.

27,648. Every paper?—Every numbered despatch is bound.

27,649. (*Mr. Cleghorn.*) That sort of paper might be destroyed, I should think?—It might be destroyed, except that it would be a numbered despatch. There is the difficulty, you would have to make a note of its destruction.

27,650. You want to preserve the series?—Otherwise you must make a note of what has become of the papers you have destroyed.

27,651. (*Mr. Lawson.*) Do you consider that the work done in your department is really of a less confidential kind than that of the political or diplomatic side of the office, as they call it?—On the contrary, I think it is quite as confidential. That fact has been admitted by the departments themselves. Some years ago a paper was written to that effect, which was signed by the late Lord Tenterden, the present Sir Philip Currie, Sir Thomas Sanderson, and all the men who had risen to hold important positions in the office. They signed that paper, unsolicited, stating that the duties of the library were second to none appertaining to the political departments.

27,652. Do you think, then, there ought to be in that office these absolute barriers between different classes of clerks, although all may be employed, on different occasions, on the same confidential class of work?—I think an amalgamation would be very undesirable,

but I think that certainly those who draw up the confidential reports should be considered as holding the same important position in the Foreign Office as the diplomatic department; but, I think it is very important that those who are employed in the library should make that department a career, and that they should spend their lives in that department. In the other departments in the office they are perpetually shifting the clerks. The clerks who are in the western department after a certain number of years are drafted into the eastern department and so forth, but the library, the chief clerk's department, and the treaty department are the only departments where the men remain permanently. I think if you were to knock down the barrier, and to say that they might interchange with the diplomatic staff of the office, that it would be anything but beneficial. I think the present system works very well.

27,653. As a matter of fact, is there any interchange between your department and, we will say, the treaty department? — There is no interchange, but there have been two occasions upon which men in my department have been transferred to the treaty department, but then both the departments are considered to be what are called outlying departments.

27,654. I understand that; but I imagine there is some similarity in part of the work that you do in your department as you have to refer constantly to treaties of a bygone date?—Yes, there is a good deal of similarity between my department and the treaty department.

27,655. Do you think it is an advantage that a clerk in the Foreign Office should be kept for the whole of his time there to one particular branch and obtain no expert knowledge of the others?—They do interchange in the diplomatic departments.

27,656. In departments Nos. 6, 7, and 8, that is, the library, the chief clerk's, and the treaty departments, it is quite an exceptional thing, I understood you to say, to have interchanges?—Yes.

27,657. Take these clerks in the librarian's department; does their being marked off in the estimates as being in your department mean that they are not available for any other, and would not be transferred to any other?—I really do not know what it means; they have no more to do with my department than they have with the political department or any other department; why they were tacked on to my department I do not know; it is purely nominal. They have never served in my department, and I do not believe they are likely to do so. I do not know why this entry is made in the estimates. I suppose it is for convenience.

27,658. You are now referring to the two you mentioned?—Yes, the two second class clerks.

27,659–60. The rest, of course, belong to your department?—Yes. There are 14 in my department at the present moment, including four lower division.

The witness withdrew

Mr. Charles Malcolm Kennedy, C.B., recalled and further examined.

27,661. (*Chairman.*) We have asked you to come back because we wish to ask a few questions with respect to the consular side of the Foreign Office. I will ask you, in the first place, whether, having looked at the evidence you have already given, there is any point in it to which you would like to make any addition?—There is not.

27,662. You told us in your former evidence that your department had communications with merchants and trading associations?—Yes.

27,663. Do you have communications from them generally, or to any extent, as to the character, satisfactory or otherwise, of the members of the consular service, I mean as to their being sufficiently alive to the commercial interests of the country?—We have heard nothing from them to the contrary. Perhaps I may add that yesterday I asked the clerks who keep the registers in my department to look to the correspondence of last year and this year in order to see if they could find any complaint of remissness in regard to the commercial interests on the part of either the diplomatic or the consular services, and the answer is that no such complaint can be found.

27,664. You know the method in which the consuls are appointed, of course?—Yes.

27,665. That is to say that it is entirely a matter for the discretion of the Secretary of State, and that the limit of age is between 25 and 50?—Yes.

27,666. Within your experience as head of the commercial department, does it occur to you that, irrespective of any complaints of the system, the appointments have had satisfactory results?—It seems to me to be quite satisfactory.

27,667. A comparison has been often made between the work done by the consuls who represent the German Empire for their own merchants and German interests, and the work which is done by our consuls; can you give any opinion upon that?—My own opinion is that our consuls assist British trade quite as much, if not more, than the consuls of other countries assist the trade of their country.

27,668. Can you say whether that is the opinion of the chambers of commerce generally in this country?—They have never said anything to me to the contrary.

27,669. Are your relations with the chambers of commerce such that you are in a position to say that in all probability you would have had remonstrances if they thought that the consular service abroad was not satisfactory?—Certainly.

27,670. You tell this Commission that if in any quarter complaints were made of the services rendered by our consuls abroad, especially in comparison with the services rendered by what is alleged to be the more active policy of the consuls of other countries, those complaints would have reached you from the chambers of commerce?—Certainly.

27,671. May I take it generally that it is the fact that you are in free communication with the various chambers of commerce upon commercial, and incidentally, consular questions?—Yes. I may say in further explanation that I have attended the association of chambers of commerce, and that I have further visited a great many chambers in their own localities.

27,672. (*Mr. Fowler.*) And you never heard any complaints against our consuls abroad, as contrasted with the consuls of Germany?—No.

27,673. (*Lord Lingen.*) Do you think the instructions to our consuls as to their duties are practically the same as those given to the German and other foreign consuls?—That I cannot say positively, because the instructions to consuls are always considered confidential documents; my own impression is, that in the case of the Belgian and French consuls, a greater latitude is allowed the consul to act, as it were, as agent for particular firms.

27,674. Suppose a complaint took this form: You Mr. A. B., a British consul, have not done so-and-so, whereas the French and the German consul did this service, which was a great benefit to the French and German trade, would the British consul, do you think, be at liberty to say: My instructions do not authorise me to take this step as distinguished from the instructions given to the French or German consul?—I think in that specific case he would report the matter home, and ask for instructions.

27,675. Short of his referring home, would he ever say, at any rate to the foreign secretary—I do not contemplate his writing a letter to a newspaper, or getting some private member to state anything in Parliament, but to the foreign secretary—do you think he would be able to say, the instructions to the French and German consuls authorised them to do this, my instructions did not authorise me; do you think our consuls are tied tighter up?—In one sense. First of all I would say that I do not think he would give the answer in those precise words, because he would not know what the instructions to those foreign consuls might be. I think he would say that he could not act as the agent for a particular firm.

27,676. But he would know what their acts were. Supposing that a British chamber of commerce said their acts were very useful, and his not performing the same acts was very injurious to trade, do you think he would, in any large number of cases, be able to say or be able to infer—"My instructions did not

Mr. C. M. Kennedy, C.B.

12 Dec. 1889.

"authorise me to do those things"?—No; I do not think he could do it in any large number of cases.

27,677. Do you think that the chambers of commerce which complained of him would not have to meet his objections—"My instructions prevented me from doing "this," and that they would have a right to complain of him personally?—No; British agents abroad are instructed to promote British trade generally, and on application to them do assist materially the travellers of commercial houses; but where a French, or a Belgian, or a German consul, might be allowed to act as the agent for a particular firm, this consul by so acting might be able to push the business of that particular firm.

27,678. I believe you have nothing to do with the consular service in China, Japan, and Siam?—No.

27,679. With reference to the appointments to that service, are they made upon similar principles as the appointments to the general consular service, or are they made upon principles similar to those for the consular offices in the Levant?—Upon somewhat similar principles to those for the Levant, I fancy.

27,680. But you have no special knowledge?—No.

27,681. Under what department are they?—They are in the American and Asiatic department.

27,682. (*Chairman.*) With reference to the prohibition of consuls from trading, do you consider that the present system of getting the services of men who are traders in good position as unpaid consuls is as satisfactory as a more expensive system would be, supposing that the money were forthcoming to provide for a larger body of paid consuls?—Expressing my personal opinion only, I do not think that a large paid consular service would be worth the expense.

27,683. You think that, as regards the second class referred to in the memorandum from the Foreign Office, namely, "Those who are engaged in trade," that the members of that class are gentlemen who efficiently serve the country, and that it would not pay to try to get a service which would contain more paid members, and more completely responsible to the Foreign Office?—Those gentlemen are sufficiently responsible, I think, for all public purposes.

27,684. Have you any view upon the question of further consolidating the functions of the diplomatic and consular officers?—My own opinion is that it would not be practicable to do so, the duties being, in fact, distinct.

27,685. Would you say that they are, in all cases, entirely distinct; in certain of the embassies, for instance; are they, in all cases, served by men with the commercial knowledge which consuls are supposed to have?—No, I would not say that, because their functions are really distinct. The diplomatic service is in communication with the Government of the country; the consular service, speaking broadly, is in communication with the local authorities and with the commercial community.

27,686. I am not sure whether you were asked any questions last time upon your relations with the Board of Trade. From a paper I have here, I see that the Foreign Office supply the Board of Trade with information upon trade questions. As you are the senior clerk of the commercial department, I should like to have that explained—how your department stands with regard to the Board of Trade in that respect?—When I was appointed to my department in 1872, there was a change in the functions of the two offices, made in consequence of the recommendation of the Board of Trade. Previously to that date the Board of Trade advised the Foreign Office on commercial questions, and, speaking broadly, the Foreign Office, in their instructions to representatives abroad, acted upon the advice given by the Board of Trade. The substance of the change made in 1872 was this: that the Foreign Office was to collect the information for itself, and to instruct directly the representatives abroad without previous consultation with the Board of Trade.

27,687. Generally, in regard to what you may call the current trade affairs of the country, I understand it is your business, in the commercial department of the Foreign Office, to collect all sorts of information through the consuls and through the diplomatic side of the establishment also, and that all that is communicated to the Board of Trade. Of course the consular reports are published, but, upon any question upon which the Board of Trade require information, they would apply to the Foreign Office, acting through its Commercial Department?—Yes.

27,688. Are there frequent communications between you and the Board of Trade. I rather want to know what are the commercial relations of the Board of Trade with the commercial department of the Foreign Office, quite in its elementary stage. I confess I do not understand what they are?—Constant and daily communications take place. For instance, on shipping questions, besides subjects more directly relating to commerce.

27,689. Upon mercantile shipping questions the consuls act almost directly as servants of the Board of Trade?—Yes, and they report to the Board of Trade on all subjects which come directly within the scope of the Board of Trade instructions, but outside those instructions they communicate directly with the Foreign Office.

27,690. I will ask you generally whether it appears to you that the present arrangements in that respect avoid circumlocution, as it is commonly called, and whether on the whole it is satisfactory to you as a practical man, and satisfactory to the chambers of commerce with whom, as you told us, you are continually in contact?—Perfectly satisfactory; chambers of commerce frequently state that their interests are well served by the arrangements made in 1872.

27,691. You do not suggest any improvement in the present relations between the commercial department of the Foreign Office and the Board of Trade?—No.

27,692-3. (*Mr. Fowler.*) Have you ever heard that the German consuls are in the habit of sending home to Berlin particulars of patterns of various manufactures supplied to the countries to which they are accredited by the United States and by England?—Yes.

27,694. Do our consuls ever send home anything of the same description?—Not precisely the same.

27,695. What do they send home?—They send home patterns of native manufactures which are in chief request in the countries in which they reside.

27,696. My question is not with reference to native manufactures. I am taking Germany as one country alone, and my question is with reference to the competition in the markets of the world of other manufacturing countries with our country as a great manufacturing country. Do our consuls furnish to the Foreign Office, information upon the patterns and specimens of the articles which our competitors are supplying in the foreign markets?—They supply information, but not patterns or specimens.

27,697. Are you aware that the chambers of commerce have called the attention of the Foreign Office to the mode in which the consular work of Germany, say, is done?—I do not remember at this moment any particular statement on that point from a chamber of commerce.

27,698. Do not you remember expressions of a feeling of strong dissatisfaction in the chambers of commerce, both at the associated chambers and in the various local chambers, as to the want of information which our manufacturers have, compared with the information which German manufacturers have?—I should hardly put it as strongly as that.

27,699. I am quite willing that you should water it down to the actual facts of the case. There has been, we will say, dissatisfaction, not great dissatisfaction, but there has been dissatisfaction?—I would rather say there have been remarks made, chiefly in reference to eastern Asia.

27,700. Very well, remarks. The remarks have not been of a laudatory character?—You would hardly expect them to be under the circumstances; but, as I have said before, I do not find record of any specific complaints.

27,701. Our manufactures have not remarked for the purpose of approval. Now that is the grievance: whether the grievance be stated by me too strongly or by you too mildly; but that is the grievance which you know exists. Whether it be well founded or ill founded, the grievance is that the manufacturers of other manufacturing countries have information supplied to them by their consular service which is not supplied to our manufacturers by our consular service?—I would really hardly put it in that way. To explain what I have heard—it has been said to me that the Belgian Government, more particularly by their commercial museum

at Brussels, have collected together a vast number of samples of goods which are sold in the markets of distant countries, goods partly made in those countries, partly sent from European centres of manufacture, and a wish has certainly been expressed that some step in that direction should be taken in this country; but then there is a difference of opinion whether this museum should be a central establishment in London, or whether it should be split up into several local museums in different manufacturing centres in this country.

27,702. I am quite aware of that; that is a difference of opinion as to detail; there is no difference of opinion as to whether there ought to be a museum, certainly?—No.

27,703. And we have not that museum now?—No.

27,704. Do not you think that the Belgian Government are doing a very desirable thing for the Belgian manufacturers in the establishment of that museum?—Yes.

27,705. Why do not our consuls send home to London what the Belgian consuls send home to Brussels?—It is a question of expense.

27,706. You do not tell us that the Belgian consular service is a more expensive thing than the British consular service, do you?—Not the Belgian service; but then the Belgian Government makes a grant for this particular purpose.

27,707. I know; of course the Belgian Government defrays the expense, but I am not dealing now with the museum in Brussels, I am dealing with the raw material upon which that museum is founded, and that is founded upon the information which is sent home by the Belgian consuls?—Not so much information as samples.

27,708. Exactly; I put that earlier to you in my examination—their samples?—Yes.

27,709. The Belgian consuls send home samples?—Yes.

27,710. The English consuls do not send home samples?—Not as a rule.

27,711. What is the reason why they do not?—Expense.

27,712. What is the expense of sending home a sample; supposing a consul, we will say at Smyrna, sees that a particular lock which is made in America is driving out of the market all the locks that are made in Wolverhampton and that neighbourhood, what is the expense of his sending over a specimen, and saying, this description of lock is what is selling here?—If I may say so, that is hardly a complete way of putting the question. First of all, you would have to establish the museum; the initial outlay would be about 20,000*l.*; the expense every year of supplying different specimens might not exceed 500*l.*—it might not be so much as that, taking the whole world over.

27,713. Then the expense is simply the initial expense of the museum?—There would be an initial expense.

27,714. It would not be 500*l.* additional annual cost if the museum was once established?—About that amount, I should say, for keeping the collection up to date, but the cost of maintenance—staff and buildings—has also to be considered.

27,715. Are you not aware that some chambers of commerce have offered to establish a museum at their own cost in their own localities, if the Foreign Office would only help them with the samples?—Whenever they ask for any samples, we use our best endeavours to obtain them, and we have sent very good samples, as you will remember, to Wolverhampton.

27,716. Is not the difficulty not so much in the question of expense, but is it not because of the different type and class and character of the consuls of Germany and Belgium and the other countries, as compared with the consuls of Great Britain?—I should say certainly not. If you would give me 25,000*l.* to spend, I will get you a commercial museum.

27,717–9. Then you say that the commercial qualification which the Belgian and German consuls possess, commands a higher salary than the social or political qualification which the British consuls possess?—No, I do not.

27,720. Are not the consuls appointed by Germany and Belgium taken from the commercial class and in the main commercial men?—I could not say whether they are more so than ours.

27,721. Do you think that the English consul, say in Africa or in Asia, is generally as well up in the commercial requirements of that locality as a German or Belgian consul would be?—Excuse me. We must draw a line. Supposing he is what the French call a *consul de carrière*, belonging to the consular career strictly speaking, if one man is in that position, and if the other man is a local trader, then I would say that the trader would know more about the commercial requirements of the locality than the non-professional men. But if you took two men of the same class, then I would say that the Englishman is quite as good as the German.

27,722. You mean take two men of the non-commercial class?—Yes.

27,723. That is what I do not want to do. There is no difference of opinion between us there. What I want to take is, Englishman non-commercial, German commercial; which makes the best consul in a commercial port?—I do not think you can say absolutely, that because a man is a trader he would be necessarily a better consul than a man who is not a trader, because you have to consider a great many questions. You have to consider, for instance, the tact of a man in dealing with the captains of vessels and with sailors. Now many of our consuls who get on best with the ship captains and sailors are non-trading men.

27,724. Supposing that those gentlemen who are so specially qualified had the advantage of some previous commercial training, do you think that would be any addition to their qualification?—Yes.

27,725. You do not think then that the appointment to a post of the character of a consul is best made by being given to men who have no previous training for that specific post?—No.

27,726. Would you favour the establishment then of a consular service to which young men were admitted, rising in it as they displayed ability and competency?—Not absolutely; there are many posts where special qualifications must be held in view in making the appointment of the consul.

27,727. (*Mr. Lawson.*) Do you believe that for the post of *consul de carrière*, as they say in France, a man with a commercial training is more often chosen by France or Germany than by England?—Possibly by Germany, but not by France.

27,728. Would you say that in France political considerations preponderate?—Yes.

27,729. But not in the case of Germany?—I do not think so.

27,730. Then a German regular consul is more likely to have a commercial training than ours?—Yes; because I think the system of education in Germany gives that knowledge generally better than the system of education in this country.

27,731. Do not you think that we might appoint more men who have a commercial training, with advantage to our trade?—I do not remember, at the present time, having heard any complaints on the ground that particular men have not had sufficient commercial training. Mercantile firms must transact their own business, the precise point where perhaps Germans have advantage over British houses is that they employ more commercial travellers, and select men who possess greater acquaintance with foreign languages and foreign requirements.

27,732. I believe that the instructions issued in 1882 and 1885 (which I have read through) to consuls are quite wide enough to cover the sending home of samples, if you drew attention to that particular point?—Yes.

27,733. It is simply a matter of definite order, is it not?—It is also a matter of expense.

27,734. That I understand. But supposing the money were provided for the museum, your orders are sufficiently wide at the present moment to cover the supply of samples, are not they?—Yes.

27,735. Has any definite proposal been made with regard to this commercial museum?—No.

27,736. Do you know whether it has been brought under the notice of the Secretary of State from time to time?—No. I do not think it has been brought forward lately.

27,737. I do not know whether you are acquainted with a paper written the other day by Mr. Law, who

Mr. C. M. Kennedy, C.B.

12 Dec. 1889.

is our commercial attaché at St. Petersburg, Constantinople, and Teheran; it was read before the London Chamber of Commerce?—I have not seen it.

27,738. He recommends the formation of a commercial intelligence department in connexion with the Imperial Institute, and one of the departments of which is to be a commercial museum. Do you believe it ought to be carried out in that way, rather than in connexion with the Foreign Office?—The information and the samples must be obtained through the Foreign Office, but whether the management had better be in the hands of a body selected from commercial men, or from the Imperial Institute, or from the more purely official element, is a matter of detail which at present I am not prepared to pronounce a definite opinion on.

27,739. At the present moment you are the commercial intelligence department of the country?—Yes.

27,740. Which is similar to the war intelligence department at the War Office?—Yes.

27,741. As a matter of fact, do you consider that your obligations extend beyond the United Kingdom; do you take notice of India and Colonial trade as well?—We do, where we are asked to do so by either the India or Colonial Office, consuls advert to colonial trade in their reports; but, as a rule, the reports are confined to the trade of the United Kingdom.

27,742. I ask that, because of course the Colonies and India would have no means of finding out except through you, because they have no representatives in other countries, what are the requirements of trade suitable to their trade products?—No; but we should be quite ready to obtain any information that they wanted.

27,743. Have any steps been taken to find out whether the Colonial Governments wish relations of this kind established and information sent regularly?—I think not; but a few years ago, when the Canadian Government asked for reports as to openings in different countries for an extension of the Canadian trade, special reports were obtained on the subject which were forwarded to Canada.

27,744. Yes, I understand a special report might and has been obtained, but I am referring to the regular consular reports on commercial matters which are sent to you once a year on the subject?—Yes.

27,745. Are they forwarded for the use of the Colonies?—The Colonial Office take 200 copies of the report, and I believe they are circulated.

27,746. Have you any means of knowing how?—No.

27,747. I believe Mr. Bryce issued an important memorandum to the different representatives of England abroad, while he was in office in 1886, respecting information on all sorts of matters?—Yes.

27,748. Have those matters which he enumerated become a regular part of the commercial reports of the consuls?—Yes, they report more or less on all subjects that he enumerated.

27,749. Do you know whether they extended only to the United Kingdom or whether they extended to the Colonies and India?—I think mainly to the United Kingdom; but Colonial and Indian trade subjects are treated incidentally, or when they arise in a prominent manner.

27,750. At the present moment, supposing there were an early opportunity for the Australian meat trade in the United States' market, would information of that be forwarded by consuls out there to you and then remitted to the Colonial Office?—Yes.

27,751. With regard to the table of fees, has the revision and the increase of fees caused any inconvenience to British trade abroad particularly with regard to shipping?—No complaint has reached me on the subject.

27,752. Of course you know the fees have been raised?—Yes.

27,753. They are levied on tonnage, are they not, now?—It is not exactly in my department.

27,754. Would it go to the Board of Trade?—No; it would go to Sir Percy Anderson in the consular department.

27,755. The Board of Trade no longer has these shipping fees?—No; they are received at the Foreign Office and remitted to the Treasury.

27,756. Are the consuls under your direction except as to the forwarding of consular reports upon trade?—No.

27,757. Not at all?—No.

27,758. When you communicate with them, do you do it through Sir Percy Anderson's department?—No.

27,759. Directly?—Directly.

27,760. They make two reports, do not they, in the year, one to you and one to him—regular reports—I am not speaking of special reports?—I do not think they make any report to the consular department.

27,761. Only to you?—Yes.

27,762. The consuls of Turkey have sometimes important political matters to attend to, and the same with the consuls in China, what happens then?—Those despatches go either to the political or to the consular department.

27,763. Would it not be a great advantage, if for the purpose of commercial information the China services were consolidated with the other part of the consular branch?—That I can hardly say, but I ventured to express an opinion as regards my own department when I was here last, that I thought that part of the present commercial business of the China political department could be worked in the commercial department.

27,764. With advantage to the English trade?—Yes.

27,765. Has that suggestion been made officially in the Foreign Office?—I suppose nothing would be done pending your report.

27,766. Do you think there is any sufficient reason for keeping the commercial part of their work on a footing distinct from the rest of the commercial work of consuls?—No.

27,767. (*Mr. Freeman-Mitford.*) With reference to the question which Mr. Fowler asked you just now, is it not the fact that foreign consuls, taken from the trading class, although they be *consuls de carrière*, have been largely accused of availing themselves of their consular position to trade as a sort of sleeping partners in firms of their countrymen, to the prejudice of other firms, even of their own nation?—I have heard statements to that effect.

27,768. Has any such complaint ever been made of our *consuls de carrière*?—Not that I am aware of.

27,769. (*Mr. Lawson.*) Have any formal complaints come to the Foreign Office, to your knowledge, as to the private trading of foreign consuls?—No, it would not come within our functions.

27,770. (*Mr. Harvey.*) Would it be part of your business to see any of the commercial reports made by the consular officers who are appointed for Turkey and the Levant under the system of open competition?—Certainly.

27,771. Do you see all the commercial reports?—Yes.

27,772. Have you formed any opinion as to the character of the reports presented by the men who have come by open competition, as to whether they are below the level, or on the same level, or above the level of the ordinary consular reports of the other men?—I should think very much of the same character.

27,773. You, of course, are well aware of the conditions of the appointment to the consular service?—Yes.

27,774. Have you formed any opinion in relation to the commercial work as to whether the system of open competition would or would not provide a better type of men for the service than the existing system?—I do not think it would.

27,775. So far as commercial reports are concerned, are you quite satisfied with the existing staff of consuls?—Yes.

27,776. Do you get reports from all consuls?—Very nearly; if I may explain what we do, it is this: at the end of the year we look through the register to see from what places there has been any failure in supplying reports. Supposing the post has been vacant, or we know of any sufficient reason, we let the matter stand over, but if there has been any negligence in the matter, the consul's attention is forthwith called to the omission.

27,777. Are all these reports published?—Yes.

27,778. In the Board of Trade Journal?—No, in the Foreign Office series of annual or miscellaneous reports.

27,779. All are published?—Yes.

27,780. And a selection only appears in the Board of Trade Journal?—The Board of Trade reprint certain portions if they think it advisable to do so.

27,781. Have you had occasion to decline to print reports at any time because you thought them not up to the level?—Very rarely.

27,782. How many such cases, in fact, had you last year?—I can only remember one at this moment. The report was not considered of a sufficiently valuable nature as it stood, and it was sent back to the writer, and his attention was called to certain omissions, and to certain statements which seemed open to doubt.

27,783. As a rule the whole of these reports are published?—Yes.

27,784. I suppose there are recommendations in the reports of these consuls which have a distinct bearing on the promotion of British commerce; would you consider it your business to take any action on them?—There might be, say, two classes of recommendations: one which requires the attention of the commercial community—in that case the attention of the trade concerned would be called to them; and secondly, if they were matters which required the attention of Government, the point raised would be referred to the Secretary of State.

27,785. Within the course of last year, have you made any recommendations to the Secretary of State based upon reports from consuls?—At this moment I do not remember having done so.

27,786. Now I come to a particular instance: taking up haphazard the Board of Trade Journal, one sees that Consul Crawford, at Portugal, in the course of a very elaborate report—and I should say a very useful report on British trade—suggested the wisdom of his being allowed to keep there a small exhibition of typical British goods, in order to show their characteristics. Would you consider it within your functions to support that view, or to take steps to see that that was carried out?—No, unless any person concerned had made a recommendation in support of it.

27,787. So that, unless you are moved by the public or by the chamber of commerce, you do not consider it your business to take any steps to give effect to any of the recommendations that your consuls may make in commercial matters?—I would hardly put it as strongly as that; but, in this particular instance, it was a matter involving expense.

27,788. As a matter of fact, have you ever made any recommendations based upon consular reports, that is to say, have you ever suggested to the Secretary of State that such-and-such a consul has reported that British commerce would be fostered and promoted by such-and-such a course, and that you suggest for consideration whether that could not be carried out?—At this moment I do not remember suggestions of my own of this nature, but despatches and reports from consuls making suggestions that British trade might be extended by firms sending out special agents have been circulated to chambers of commerce and traders.

27,789. (*Mr. Freeman-Mitford.*) Would not the despatches go to him?—Yes.

27,790. (*Mr. Harvey.*) I suppose the whole of the consular reports cannot be read by the Secretary of State. I presume that they come to your department, and that yours is the department of the Foreign Office which is supposed to receive and to peruse these reports?—Yes.

27,791. We can hardly expect the Secretary of State to read all the consular reports?—No; but every report is read by the Under Secretary of State in proof if not in MS.

27,792. (*Mr. Freeman-Mitford.*) It would be the pick of the despatches that you would submit for his consideration, and those he might be expected to look at?—Yes.

27,793. (*Mr. Harvey.*) Yes; but out of all the masses of recommendations that consuls might make, some of which you might, as the responsible head of the commercial department, think foolish, others trivial, some important—the point that I want to get at is that you do not consider it your business to submit, for the consideration of the Secretary of State, that a particular recommendation which might commend itself to your judgment should be adopted?—These despatches are considered in proof if not in MS. by the Under Secretary of State, and in submitting them to him I make such remarks as seem to be called for. If the Under Secretary considers that anything remarkable is found in them, he calls the attention of the Secretary of State to the paper.

27,794. (*Mr. Freeman-Mitford.*) Would not you put a minute of some sort to this effect upon the paper: "This despatch is important, and deserves your "Lordship's consideration"?—Certainly.

27,795. Without a formal report?—Yes. I might say, "This report contains important suggestions," or something to that effect.

27,796. In that sense, I suppose you must have submitted a great many recommendations to the Secretary of State in the course of your career?—Yes; and in this way I have called attention to the requirements of British trade in foreign countries.

27,797. (*Mr. Harvey.*) That is what I want to get at, whether, as a matter of fact, you have done so?—Yes.

27,798. I understood you to say just now that you had not?—I took you to mean such a recommendation as the opening of a room for an exhibition of samples in a consulate.

27,799. I take that as an instance, it may be one that you may not think worthy of following up; that, of course, would be left to your judgment. Take another recommendation of another consul, that facilities should be given for very much greater help to be given to British traders in the matter of the infringement of trade marks. If you saw that in a report would you consider it your business to make any recommendation to that effect to the Secretary of State?—That was considered when Mr. Bryce was in office, and it was decided then that this was not a matter in which the consul could properly take steps, but that it was a legal matter in which the persons aggrieved must take their own action.

27,800. Do you receive suggestions from the Board of Trade with reference to the commercial department and commercial matters?—Not often.

27,801. Of course, these reports are all sent on to the Board of Trade?—Yes.

27,802. Would you only expect to be moved by the Board of Trade in a commercial matter, or would you consider it your business to act yourself?—It is our business.

27,803–4. But you have had no complaints whatever from any merchants as to their not getting the assistance they want from English consuls?—No.

27,805. Suppose the intervention were rather of a diplomatic than of a consular kind, would you have anything to do with it?—Yes, anything of a commercial nature would come to me to be dealt with.

27,806. Would you, for instance, have reports presented to you from the commercial attachés to the missions?—Yes.

27,807. As a matter of fact, do you have them presented?—Yes.

27,808. Has it ever occurred to you that there might be a considerable development of that kind of report—that some of them are very valuable reports indeed?—Yes.

27,809. How many commercial attachés are there?—Two.

27,810. Only two?—Yes.

27,811. Which are those?—Mr. Crowe, whose headquarters are at Paris, and Mr. Law, whose headquarters are at St. Petersburgh.

27,812. Has it occurred to you, that if there was a commercial attaché in connection with all our embassies on the same scale as those that you have referred to, that commerce would be greatly assisted; or do you think that it is unimportant?—I doubt whether the benefit would be worth the expense.

27,813. (*Mr. Lawson.*) Do you prefer a suggestion that was made to us yesterday that, instead of that, there should be consuls general, real consuls general, appointed in the different capitals, who would be able to supervise and report generally upon the trade con-

Mr. C. M. Kennedy, C.B.

12 Dec. 1889.

ditions of the country?—I have, personally, considerable doubt whether the benefit derived would be commensurate with the expense. The present reports are good.

27,814. (*Mr. Harvey.*) Assuming that I, as a man of business, say that the publication, especially in the form of the Board of Trade Journal, of the consular reports has been attended with very considerable advantage to British trade, would you not think that anything tending to develop that would fairly come within the purview of your official business to recommend?—Commercial men, as far as I have heard their opinions, prefer the publication of commercial reports in the Foreign Office Series rather than in the Board of Trade Journal.

27,815. (*Lord Lingen.*) Are you consulted when consular appointments are made?—Not as a rule.

27,816. Generally?—No.

27,817. The candidates' names are kept on a list in the Secretary of State's keeping, I presume?—Yes.

27,818. From what you see of the appointments, have the bulk of the men who are appointed had previous commercial experience?—I should say not.

27,819. (*Mr. Harvey.*) Do these reports come from consuls who adopt the service as a profession, or from those engaged in trade equally?—The rule is the same for all consuls.

27,820. (*Mr. Freeman-Mitford.*) Mr. Crawford, for instance, was a clerk in the Foreign Office, was he not?—Yes.

27,821. (*Mr. Harvey.*) But you have not observed, have you, that there is any superiority in the reports written by men who have undergone the examination? Take, for instance, Mr. Crawford's reports, they are exceptionally able reports, no doubt?—Yes.

27,822. Do you think that the method of examination, and that the method of entrance to the consular service, is one likely to give us the best type of commercial report?—I think that we might, for instance, add to the subjects of examination, commercial knowledge and geography.

27,823. You think you might?—Yes.

27,824. Are there any other qualifications that you miss now in the training of consuls, which you think would be advantageous from the commercial point of view?—Yes, I should like to make it a rule,—I do not mean that it should be made an absolute rule, there might be exceptional circumstances,—that every consul, before proceeding to his post, should serve for a month or two in the commercial department of the Foreign Office.

27,825. (*Mr. Freeman-Mitford.*) As well as in the consular department?—Yes.

27,826. (*Mr. Harvey.*) What would his service in your department show him?—It would enable him to become acquainted with many details of foreign tariffs, and it would show him, in a practical way, the interest which is taken by the Government and by this department of the Foreign Office in commercial questions and the mode of dealing with them.

27,827. As it is now, do you feel that there is anything like an adequate security that the men who are appointed consuls know anything of, or have any interest in, commerce?—Yes, I think we can say that is the case; they are men of general education, and they are fully aware of the great commercial interests of the country, and they naturally act accordingly.

27,828. (*Mr. Freeman-Mitford.*) Without being experts they are able to take a general and comprehensive view of the matter?—Yes.

27,829. (*Mr. Harvey.*) Still you think if they spent some time in your department they would become more alive to the importance of commercial considerations?—Yes, and I may say that some consuls who have served in my department have stated that they have derived great benefit from having done so.

27,830. I think, in answer to Lord Lingen, that you said you had nothing whatever to do with the appointment of a consul?—That is so.

27,831. If, for instance, you observed that the reports written by a particular consul were exceptionally able, and that his observations on trade were of great value, would it in any way be within the purview of your functions, in the case of a vacancy in some other more commercial centre, to recommend him for promotion?—No, it would not be within my province to recommend him for any definite promotion; but my course is, whenever a man in either the diplomatic or the consular service writes any particularly good report, to call the attention of the Parliamentary Under Secretary to it, and if he thinks it is of an especially valuable nature, he calls the attention of the Secretary of State to it.

27,832. Then do you think that that course on your part and the accumulation in an office of recommendations or mentions of that sort have actually been effective in getting a meritorious officer higher promotion?—Yes, in some cases it actually has done so.

27,833. Are you clear that there are individual cases to which if we go into names you could refer in support of that?—Yes.

27,834. (*Mr. Lawson.*) Do you think there might be advantages in appointing more consuls-general, supposing the money could be provided?—Yes, in the case of some countries I think it might be beneficial, at all events as a tentative measure.

27,835. (*Chairman.*) I think the advantage in having a consul-general as distinguished from a commercial attaché was rather insisted upon, because it was thought that a consul-general was a person able personally to interview directly and without the intervention of his embassy or his legation, a great many people in the country to which he is accredited, whom otherwise he would not have access to?—He would be more in touch with the commercial community.

27,836. Supposing the money for these consuls-general were forthcoming, and it were merely a question of convenience, from your observation of the commercial department in which you are interested, do you think that the commercial interests of this country would be furthered if there were a certain number of men available, one, for instance, to take Russia—say at Moscow?—Yes.

27,837. And an additional man in France, and an additional man in Germany, somewhat in the position of the consuls-general who, as you say, keep in touch with foreign merchants and with home merchants?—I am doubtful as regards these countries.

27,838. Do you think that they would really practically be worth the expenditure of the money of this country for the advantage of the trade of this country; that is the way in which it was really put to us?—In a limited number of instances; for instance in the case of Spain, Portugal, and Russia, and in South and Central America, I should say it would be to the advantage of the commercial community. Our two consuls in Mexico have already been instructed to make journeys of this nature.

27,839. Do you think that such a man should be rather a consul-general than a commercial attaché?—Yes.

27,840. In what particular localities do you think some good results might ensue from this course?—Spain and Portugal, Russia, and South and Central America.

27,841. (*Mr. Freeman-Mitford.*) Would you have one man for Spain and Portugal combined, or would you have two men?—One man.

27,842. (*Mr. Harvey.*) Have you any other recommendations for the promotion of knowledge of, or interest in, commerce, than that all the men should pass through your department; have you any other recommendations of that kind to make?—No actual recommendation.

27,843. (*Chairman.*) I was going to ask you shortly about the recommendations of the Committee of 1872 before which, I think, you were a witness?—Yes.

27,844. I do not know whether that was before or after you undertook a visit or tour of inspection; did you go more than once to Turkey and other parts?—It was after I went to Turkey, and before I visited consulates in France, Belgium, and the Netherlands.

27,845. Have you been on many such visits of inspection on behalf of the Foreign Office?—No, simply those two journeys.

27,846. Were you at any time acting in some capacity abroad?—I have been commissioner under commercial treaties and delegate in commercial negotiations.

27,847. Among the recommendations made by the Committee of 1872, I find this: "That though young

" men should be introduced into the service it should " not be exclusively thus manned." That I understand to be your opinion?—Yes.

27,848. What do you think can be done, or what do you think ought to be done, for the introduction of young men into the service, or what has been done at the present moment with special reference to the consulships in the Levant, and so on?—I must not be supposed to be expressing the opinion of the Foreign Office in the matter, but the opinion which I ventured to express in 1872, and which I still hold, is that there are certain posts where it is desirable to have a salaried officer. Public interests do not require a large salary sufficient for the permanent maintenance of a man. In those cases I would like to see a man put in there with a salary sufficient for the post, but not of an amount which would be sufficient, if he had to stay there all his life.

27,849. A commencing salary?—With a commencing salary.

27,850. When you speak of places of that character, do you mean places that are now already paid places?—Yes.

27,851. Do you think that out of that list of paid places—perhaps it would be invidious to ask you to specify one or two, but if you can I should be glad—there might be some which might be paid on a lower scale, and to which young men on first entering the service might be appointed with a prospect of going on afterwards. Is that your opinion, speaking for yourself personally, and with all reservation?—Yes, with all reservation I think that some posts of that nature might be found.

27,852. The general practice of the consular service appears to be, so far as the evidence before this Commission goes, that the man once appointed to a place may stay there for life if he chooses, and that it is not intended that he should go on to promotion. If there was this introduction of young men to a limited extent at lower salaries, and with the intention to promote them, would your idea be that they should be open competition men?—No, I should have them appointed in the same way as at present.

27,853. Then you are not in favour of the introduction of even limited competition into the appointments for the consular service?—Supposing the Secretary of State thought fit to nominate three or five men to compete for a particular vice-consulship, I personally should see no objection to it, but I think it is entirely a matter for the discretion of the Secretary of State.

27,854. I am asking you from your own knowledge of the kind of men who have been appointed, and in view of the suggestion which you are now tentatively making of the appointments of young men, in what way do you think they had better be appointed. You must be aware that the current of public opinion rather lies, though perhaps not so strongly as it did in favour of open competition, and if such a course be suggested, is it your opinion that it would help the commercial interests of the country?—I would certainly not throw posts open to competition, but I see no objection to a limited competition.

27,855. (*Mr. Freeman-Mitford*). Are you satisfied with the class of men who have been appointed under the present régime?—Perfectly.

27,856. (*Mr. Lawson.*) And you have no fear of the dangers of absolute patronage?—No.

27,857. (*Chairman.*) The Committee of 1872 also recommended "That the increased cost of raising " salaries of some of the consuls who are underpaid " might be more than met by, among other things, " the employment of young men as subordinate " officers"; possibly that is the suggestion to which you were just now alluding?—Yes.

27,858. Can you say generally whether the recommendations of that Committee for the reduction of redundant posts, and the employment of young men as subordinate officers have been carried out?—I can say that the recommendations of the Committee have been carried out as regards redundant posts, but I cannot answer that as regards the employment of younger men.

27,859. (*Mr. Lawson.*) You cannot answer, do you say?—Yes.

27,860. You do not tell us that it has not been carried out?—No, but that I cannot say, the subject is not in my department.

27,861. (*Chairman.*) I understand it to be the view of yourself, that whether it be by limited competition, or whether it be under the present system of the complete responsibility of the Secretary of State, it might be desirable, in regard to some of the present paid posts of consulates, to introduce some younger men on a lower scale of salary, who might quite efficiently discharge the duties of those places, to whom it would be a stepping stone to future preferment, is not that so?—Yes, it must be very clearly understood that it is to be a stepping stone.

27,862. If some of those posts could be adequately filled up by young men, who would be first introduced into the service younger, presumably, than those who usually come in now, is not it rather an inference that at present there has been rather more expenditure upon some of those posts than is necessary?—I should rather put it in this way: that if the service was more of a recognised career, then there are certain posts where some small reductions of salary might be made, but nothing very sensible.

27,863. But, at all events, you would be in favour of the introduction of some such system if it were possible, and you think that on a modified scale it might be possible to offer something more of a career to young men to enter the consular service?—That is, within certain limits, my personal opinion, but I should like to explain what I mean: some consulates have political and judicial duties; some are purely commercial; and posts which are purely commercial might be looked upon to form a service in which younger men might rise in a career to higher posts.

27,864. (*Mr. Freeman-Mitford.*) Is there not this danger about establishing such a career as you propose, that at the present moment, as a rule, consuls are appointed to a post, and they remain there for a considerable number of years, and acquire a very great local knowledge, and become specially valuable in that post on that account, whereas if you were shifting them about as you do in the diplomatic service and in some other careers, you would lose the benefit of that very large and extended local knowledge which is so valuable to our sailors and traders and others who frequent those ports?—That is the case.

27,865. Is that not a danger?—Yes, there are advantages and disadvantages in each system.

27,866. It has been held, has it not, to be a very decided advantage that men should not be shifted, but that they should remain, say, for a great number of years in one post?—Yes, that has been held.

27,867. (*Mr. Lawson.*) I should now like to ask you whether in some cases the fact that these consuls hold their posts for life without opportunity of promotion exercises a somewhat depressing influence on their work?—I think in some cases it has that tendency.

27,868. If there was some scale of posts, would there be any chance of advancement and an inducement to the better men to do the very best work?—I do not quite follow you.

27,869 If in a country you were in the habit of promoting from one town to another, I do not say frequently, but when a vacancy occurred, would that induce a man to strive to the utmost in order to get this promotion?—Yes.

27,870. Do you think you might do that under the present system?—No, the present system does not hold out that inducement, because a man is appointed to his post with the contingency of remaining there.

27,871. (*Mr. Freeman-Mitford.*) Would not that be met by an increment of salary better than by a change of post?—The drawbacks which I see would be met by that alternative, or as I would put it, by granting a personal allowance in such cases.

27,872. (*Mr. Harvey.*) Have you ever compared our consular service with the French?—Not lately, because questions connected with the consular service as a service have been for the last 16 years quite out of my department.

27,873. You know, I think, that the French service is a very much more highly graded service than ours?—Yes.

27,874. And your mind evidently runs in favour of some modification of the existing system?—Yes.

27,875. Do you think it would be possible to grade all the consulates so as to get a ladder (to use the ex-

Mr. C. M. Kennedy, C.B.

12 Dec. 1889.

pression of Sir Percy Anderson yesterday) from the earlier appointments up to the higher ones, so that it should be a career in the French sense?—I would hardly put it in that way. I think posts might be classified and grouped in certain divisions.

27,876. (*Mr. Lawson.*) And that there would be a graduated scale in that group?—You could make promotion from one group into another, or after a certain number of years, a man who had served well, but who had not got his promotion, so to say, to another grade, could have a personal allowance of 100*l.* or 150*l.* a year to give him a reward for his services.

27,877. (*Mr. Freeman-Mitford.*) You would in that way preserve the value gained by local experience?—Yes.

27,878. (*Mr. Lawson.*) For instance; I take a country like France; of course there are a number of paid posts there?—Yes.

27,879. But there does not seem to be any principle in the distribution of pay; it is more or less haphazard in some cases, apparently?—That is rather out of my department.

27,880. Still you could see that there would be some advantage taking France as a group in itself, or as one of a group in having some sort of graduated scale?—It would make it more symmetrical, certainly.

27,881. (*Mr. Freeman-Mitford.*) Do you think that some such system as having first-class, second-class, and third-class consuls would be valuable in the sense that you have indicated?—Yes.

27,882. (*Mr. Lawson.*) I take the United States. I see there the consul at Chicago has 900*l.*, and the consul at Charlestown 900*l.* Do you suppose that the climate is the determining condition there?—I fancy so.

27,883. (*Chairman.*) May I take it generally, as a result of the last question that has been put to you, that you think that on the whole it might be desirable at all events to consider whether it is not possible to introduce some classification of consuls such, as I understand, exists in the China and Japan service?—Yes.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

EIGHTY-FIRST DAY.

7, Whitehall Place, Westminster, S.W., Friday, December 13th, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN.	Mr. J. CLEGHORN.
Rt. Hon. H. H. FOWLER, M.P.	Mr. A. S. HARVEY.
Mr. A. B. FREEMAN-MITFORD, C.B.	Mr. H. W. LAWSON, M.P.

Mr. H. WALPOLE, C.B., *Secretary.*

Mr. JAMES BRYCE, M.P., called and examined.

Mr J. Bryce, M.P.

13 Dec. 1889.

27,884. (*Chairman.*) You were, as we know, the Parliamentary Under Secretary at the Foreign Office?—Yes.

27,885. I think we will get on the notes first, please, the period that you held that position?—From the beginning of February 1886 to the end of July in that year.

27,886. We are anxious to have your views, first on the constitution of the Foreign Office, so far as you saw its work, and then to hear any suggestions you may have to make for its improvement; and likewise with reference to the diplomatic and consular services any points which, during your work at the Foreign Office, struck you as fairly open to criticism. I think I had better ask you to take generally any points on which you have any suggestions to make to the Commission?—Would you rather that I began by stating points myself or that I should say, after you have asked me questions upon the points that occur to you, whether there are any things that I should like to add?

27,887. I think the wish of the Commission would be for you to be good enough to take any particular points that impressed you as open to criticism and improvement during the time that you were at the Foreign Office?—I think the distinction between supplementary and diplomatic clerks in the Foreign Office need not be maintained. I could never see that any sufficient gain accrued from maintaining that division.

27,888. (*Lord Lingen.*) Do you understand by supplementary the men who are in the librarian's department?—Yes, and in the treaty department. I think there is one also in the commercial department.

27,889. (*Chairman.*) Do I understand you to think that they should be assimilated to the diplomatic establishment—the general establishment?—I think so. In order to do that, certain other changes might probably be necessary, and then I should be disposed to think that the system of lower division clerks might be more extensively used, and that a good deal of the work in the librarian's department now done by supplementary clerks might be done by lower division clerks.

27,890. (*Mr. Fowler.*) There are 36 clerks on the establishment, and there are 16 supplementary clerks. Now do you propose that those 16 should be put on to the establishment, and so making together, 52 of this higher class of Foreign Office clerks, or do you mean that the 16 should be practically higher division clerks?—I am not prepared to commit myself as to the numbers that would be requisite to do the work of the office. What I mean to say is rather this: I do not think that any sufficient advantage is gained by having the distinction between the diplomatic establishment clerks and the supplementary clerks; and I think it would be better to have one system for all upper division clerks, and one kind of promotion. But then I should propose to reduce the total number of establishment clerks by giving a good deal of the work which is now done by them to lower division clerks, and I do not think that in that way any greater expense would be incurred; possibly even a saving might be effected.

27,891. (*Chairman.*) Have you anything to say upon the mode in which the clerks on the diplomatic establishment are at present appointed?—Perhaps you will allow me to say, once for all, that I desire in all that I say to be taken to speak with the modesty and diffidence

that becomes a person with only six months experience. I am only giving you my first impressions. Of course first impressions are sometimes as good as later impressions, but still I do not want to be taken as speaking very positively about the matter, because my experience was very short. Replying now to your question, I do not feel that there would be any great gain in introducing the same system of absolutely open competition which exists in the other offices. It seems to me that we now get very good men —men of very considerable natural ability—and, generally speaking, of a high education; and that nearly everybody who desires a nomination would be likely, by some means or other, to obtain a chance of competing. There is something in the argument that both for the diplomatic service and for the Foreign Office, it is desirable to retain a rather freer hand and rather ampler opportunities of ascertaining what a man's private character and connections are than might be necessary in the case of many of the other public offices.

27,892. Would that view of yours be still further strengthened by the desirability of bringing the diplomatic and the clerical establishments, so to speak, of the Foreign Office more together and making them interchangeable?—If you mean the political departments and the other departments, yes, I think so. I think I may say (though, perhaps, that is a matter to refer to afterwards), that I should think it would be an advantage if we fused the diplomatic service with the Foreign Office, as is done in some foreign countries.

27,893. Do not you see that possibly one difficulty in the way of that is the question of expense, and that there are many young men who are ready to take a career in the Foreign Office, but who have not got the requisite means to go, under the present arrangements, into the diplomatic service?—I do; but I think we make a mistake in that rule in the diplomatic service about private means. I can conceive that the country would be better served if we paid a better salary to our young diplomatists at starting; that we should really get a more valuable stamp of man, and that they would be more useful to the country than those we get now.

27,894. You mean if you did away with the rule that attachés are supposed to have a certain amount of private means upon entering the diplomatic service?—Yes; there would be no doubt some pecuniary loss to the country, but that would be more than repaid to the country in other ways.

27,895. I understand you to be of opinion that it would be better to thoroughly unite the services?—I think so. Perhaps I ought to say, as regards competition, that I should like to feel that it was, even more distinctly than at present, the understanding if not the written rule, that any person occupying a recognised public position should be entitled to apply to the Secretary of State for a nomination for a young man for whose character he was prepared to vouch. For instance, you might say that the head of one of the Scotch universities, or one of the colleges at Oxford or Cambridge, should be entitled to write to the Secretary of State——

27,896. (*Lord Lingen.*) And the head master of a public school?—Possibly the head master of a public school —should be entitled to write to the Secretary of State, even if he had no personal knowledge of the minister, and say, "I know of such and such a one to be a person "of conspicuous talent, who seems well fitted for this "career in the public service, and for whose character "I am prepared to vouch, will you give him a nomi-"nation"? It ought to be a matter of course that the Secretary of State, after making all the inquiries necessary to satisfy his own mind, should give a nomination in cases of that nature.

27,897. (*Mr. Freeman-Mitford.*) Would not that be the case now?—I daresay it might be; that would depend on the practice of the particular Secretary of State. I am not sure that the heads of such institutions as I am contemplating are aware that the Secretary of State would be prepared to give effect to their recommendations.

27,898. (*Chairman.*) That would not necessarily imply, would it, that when there was a vacany any of these names would be selected from the list for competition, as that is where the selection comes in at the present time, as I understand?—No doubt, and I think in that regard that the practice ought to be a little altered, and that it ought to be understood that the Secretary of State would give every man on his list, of whose character and abilities he had sufficient evidence, an equally fair chance of competing for nomination.

27,899. (*Lord Lingen.*) Do you happen to know, as a matter of fact, whether the Secretary of State insists on a man calling on him before he puts his name on the list?—I think not. Once or twice when I have written to Secretaries of State on the matter I have had no reason to suppose that they did require the men to call upon them. Sometimes the Secretary of State has asked me about the men.

27,900. (*Chairman.*) Would you think that the whole of the men upon his list should have the right to go up for that vacancy?—I am not prepared to say that, because he might think that it was right to give a chance to those who had been down for a longer time. I have not specially considered that point, and it may be that it would be a very long list, and that some of the men had been down for a couple of years, and were, of course, getting older: and, therefore, the men who had been put down first ought to have the first chance.

27,901. (*Lord Lingen.*) It would be necessary, would it not, if you make it a system of limited competition, for which I think there is an immense deal to be said in appointments of this character, that nobody should be able to claim, as a matter of absolute right, to have put on the list either himself or his protegé?—That is precisely what I meant to convey, that there ought to be so much discretion left to the Secretary of State that nobody would have a right to complain if he is not put on; only that there ought to be an understanding that the Secretary of State acted as a mere trustee in the matter, and not in any way as a dispenser of patronage guided by personal or political considerations.

27,902. I should like, before we pass from that subject, if I might, to ask you a question about competition. The competition for the Foreign Office is not so multifarious a one, and, therefore, as many believe, not so high a one in regard to the subjects of it as the competition for the Civil Service generally; but the great anxiety to get into the service makes it practically a very severe test. The same competition, as far as subjects go, is applied both to the political clerks and to those clerks whom you have called supplementary clerks; and the one man gets in by this competition to a career that may take him up to be Under Secretary of State, when he will get 2,000*l.* a year, and another man by the very same examination enters a career in which he will not get beyond 600*l.* or 700*l.* Does that, as far as your experience goes, make a difference between the capabilities of the two sets of clerks in the librarian's and in the political departments?—I think my experience is rather too short to enable me to give a good opinion. I should have said that the impression I gathered while in the Foreign Office was that the supplementary clerks were, speaking generally, and subject, of course, to many exceptions, not men of quite so much capacity or education as the men in the political and commercial departments

27,903. (*Chairman.*) Perhaps you would be good enough to take another point on which you have something to say?—I should like to add to what I said about the larger employment of lower division clerks that I believe the quantity of really confidential work in the Foreign Office is by no means so large as is sometimes supposed. It struck me while there that the number of cases in which there were real secrets which it was very desirable to keep close, and for which anybody would have been prepared to give a large price, was not very great.

27,904. (*Mr. Freeman-Mitford.*) But does it not vary very much in different times?—No doubt it does vary.

27,905. Sometimes it may be said to vary enormously, may it not?—Yes, it does; but I think in the ordinary course of affairs it does not vary very much, and even at the times you refer to I should doubt whether it could not be done by a much smaller number of clerks than those who are now employed in the political departments.

27,906. (*Lord Lingen.*) Quite apart from the question of standing, is not there this: that a lower division clerk in his circle does not find people quite so well informed and quite so curious, with not quite so great a temptation to talk of matters of general and public

Mr. J. Bryce, M.P.

13 Dec. 1889.

interest as a gentleman more highly placed?—No doubt that would be so. At the same time I was rather intending to include the case of some person being prepared to give a sum of money for a secret, or trying to establish permanent relations with someone in the office through whom he could get out any secrets. There seems good reason to think that there would be found some lower division clerks who, if a career were offered them in the office, would inspire as much confidence in their honour and probity as the men in the political departments do. It does not follow that because a man has risen from a lower social station he cannot be entrusted with secrets.

27,907. (*Chairman.*) That is with reference to the clerks. Is there any other point connected with the clerical establishment that struck you as worthy of notice?—It deserves to be considered whether there ought not to be a general copying department, and whether you ought not to make a much larger use of type-writers and shorthand than is done in the office. When I was there I proposed to introduce the type-writer, and the suggestion seemed to be thought very surprising and novel. I rather think one has been introduced since.

27,908. There is one now?—I am sure there ought to be more than one. I believe in similar establishments outside they are employed. I should say that all large commercial establishments, both here, and even more so in the United States, make a much larger use of the type-writer than we seem to do in the Foreign Office.

27,909. (*Mr. Lawson.*) You are aware that in the United States type-writers are used in all the offices to a very much larger extent than we see here?—I believe so. I ought, perhaps, to say in connexion with the same subject, that there is another reason of very great moment for relieving the establishment clerks, the upper division clerks, from the mechanical and copying work which they do largely now. It is work which is very dull and tiresome, and its protracted monotony acts injuriously on them, because for a good long while they get nothing else to do, nothing which calls out their intellectual force. These men are often men of very considerable abilities, and of high education; they come in, probably, with that sort of zeal with which a clever youth begins his work. They are set down to do the dullest and most mechanical work for four or five years of their life. It is true that the matters may be of great interest, but the process of copying is extremely tedious and irksome. I think very often they lose all interest in their work which they would keep up if they had got more interesting work to begin with. You cannot imagine a more unfavourable influence to bring to bear upon a young man than to set him in the first years of his zeal and interest to do dull and tiresome work.

27,910. (*Lord Lingen.*) In other offices those men would simply prepare, for an approval by their seniors and superiors in rank, drafts, but the copying, when the draft is once settled, would be sent over to the copying-room and done by the copyist and lower division clerks. That system hardly exists at all in the Foreign Office, does it?—To a very small extent, and I think, as regards the political departments, it does not exist at all, because all the work of the political departments is practically deemed confidential, although a good deal of it is not really confidential.

27,911. (*Chairman.*) Has your attention been at all called to the organisation and arrangements of the librarian's department of the Foreign Office?—To some extent. I used to have occasion frequently to get memoranda from the librarian's department, and I certainly was very much struck by the extraordinary knowledge and readiness which Sir Edward Hertslet displayed, and the very valuable services that the librarian's department rendered.

27,912. (*Lord Lingen.*) In connexion with that, supposing that all the young gentlemen in the political department were obliged to pass through the librarian's department for a year or two, would not they gain a very much more intimate knowledge of the traditions and general history of the work on which they are employed than they have now an opportunity of getting?—Certainly I think they would. At the same time there is a great deal of merely mechanical work in the librarian's department, and it would be a waste to set these men to the mechanical work of indexing. I should have that done by lower division clerks, they should only supervise.

27,913. (*Chairman.*) Have you considered the librarian's department from the registering and record point of view?—Yes; it seems to me very valuable in that way, but I think there is a good deal to be said on the question whether you should register the papers that come in, in the first instance, in the several departments, or have a general register, and connect that general register with the librarian's department. At present, if I recollect rightly, the papers that come into the political departments and the commercial department are all registered there and then; after being kept something like two years they are sent over the librarian's department to be permanently placed away and indexed. I am not sure that it may not be perhaps as well to have them registered and indexed on one general system as soon as they come in, or even to have a double system—a departmental system and the other system at the same time.

27,914. So far as your work at the Foreign Office is concerned, did you find any inconvenience or any delay from the present system in getting the papers that you required?—I cannot say that I did. Certainly I found that papers and memoranda came very quickly from the librarian's department.

27,915. (*Mr. Freeman-Mitford.*) You never had any difficulty in getting a paper that you wanted?—Never.

27,916. (*Chairman.*) Will you now go on to your next point?—I have often heard questions raised about the desirability of having an intelligence department in the Foreign Office, and I certainly should like to say that there is not quite enough attention paid there to the keeping up of knowledge of current European politics. It did not seem to me that there was enough provision made in the arrangements of the office for knowing what, as a matter of fact, were the actual political phenomena, the party changes, and the characters of the men and their projects and relative positions to one another, that go on at this moment in the legislative assemblies and political life generally of different European states and countries.

27,917. (*Lord Lingen.*) Then, if you relieved those men from the mechanical labour of copying, they are just the people who might, for their several departments of the world, get that information up?—I should think so, especially if you did it to a considerable extent, by the young men who had gone abroad to fill diplomatic posts, and had come back afterwards to the work at the Foreign Office.

27,918. (*Chairman.*) Would that not be done in a very reasonable way by attaching one or more of these young men to the librarian's department and calling it an intelligence department, generally?—Certainly, it need not be a separate department. I did not at all mean to suggest that, but only that provision ought somehow to be made for the accumulating and keeping readily available of current political information.

27,919. (*Mr. Freeman-Mitford.*) The librarian's department would not be a training for them in that direction, would it?—No, but the librarian's department is a general historical and political record, and you might very well add on to it what I have called an intelligence department without creating a separate department with a separate staff.

27,920. (*Chairman.*) Sir Edward Hertslet told us yesterday that he felt very strongly the impropriety of the name of "librarians department," and practically, as I understood him, it was an historical intelligence department, so to speak?—That is quite true; it would be a much better name for it—"historical intelligence "department." I think that, as far as history goes, nobody could do it better than Sir Edward Hertslet; but all that I complain of is that the history does not begin soon enough, so to speak, and that I want to have contemporary history as well.

27,921. (*Lord Lingen.*) It does not go on late enough, you mean?—Yes, that is, perhaps, a better way of putting it. I meant that as soon as an event happens it ought to be treated as history, and recorded by the department.

27,922. (*Mr. Fowler.*) You want to give up ancient history?—I want to carry history down to yesterday.

27,923. (*Mr. Freeman-Mitford.*) Would that be met by your proposal that the two services should be amalgamated?—If you had made provision also for always having somebody in the Foreign Office whose business it was to ascertain what was going on in foreign countries and then make a record about it. At present the only way in which we get such information

is by the despatches which Foreign Ministers send home. The despatches are often very good, but they turn a little too much upon high European policy, that is to say, upon international relations, neglecting domestic affairs, and to some extent also upon purely personal matters relating to the several Courts. It did not seem to me that there was enough provision made for giving a history, so to speak, of the current parliamentary politics and of the movements of opinion in some of those countries. I was especially struck on that point as regards the United States, where everything turns upon your understanding of the current party politics. If we are negotiating a treaty with them it is absolutely essential to know the exact position of their current party politics, because the treaty will not be ratified except upon grounds which depend upon the American party politics at the time. I do not think there is anything in the nature of such a record at the Foreign Office. There might occasionally in the despatches of the Ambassador be an observation upon the subject, but there would be nothing really upon which the Secretary of State would be able to make up his mind as to how he should deal with a question which had its basis in the different forces which would be likely to determine the ratification of a treaty in the American Senate.

27,924. (*Chairman.*) Then would you suggest that our ministers should in their despatches pay attention to these points, and that there should be more attention paid to keeping a record of them at home in the Foreign Office?—Yes; I think a good deal might be done by having a greater interchange of men between the Foreign Office and the diplomatic posts, so that the secretary of the legation, or the attaché who came back having made a study of politics out there, would have a great deal of information with regard to the politics of the country in question.

27,925. (*Lord Lingen.*) I suppose the working of an intelligence department in the Foreign Office itself, might really strictly be the snipping of the newspapers and what you would want in the clerk is knowing what to snip? Would you say it was the duty of the third secretary, or the junior, or the secretary (if there was only one in the foreign mission), to furnish this information, we will say in the quarterly reports to the Foreign Office; or would you make it work at the Foreign Office itself?—Yes; there ought to be somebody whose business it was to know all that was passing in that way, to take out of the despatches everything relating to the current politics of the country, and have them at his fingers ends, and, of course, to accumulate cuttings from the press would be one method of preserving information useful in the way contemplated.

27,926. There would be no way of getting at that information, except by cuttings from the press, unless you were personally on the spot, and acquainted with the people that were working the system?—Well, the person I am contemplating might often say to the under-secretary in the Foreign Office, "I do not "know enough about what is going on upon such and "such a political question which is likely to be "interesting to us in such and such a country, will "you write to the embassy and ask them to give us "a report upon this point?" It would be his business to make such suggestions. Then a report would come back upon that particular point which would be kept in the intelligence department for reference. At present the ordinary work which the office has to do, is really so very heavy, that neither the under-secretary nor the Secretary of State, nor perhaps even the assistant under-secretaries have time enough to think about current politics and movements of opinion, and social or economic changes influencing politics which go on in foreign countries.

27,927. There is one question I should like to connect with that. Is not the attempt to carry three-fourths of the work too high up instead of settling it finally by people who are low down, overwhelming the responsible people at the top. Would your experience during the time you were at the Foreign Office lead you to say that a great deal of the work came to the Under Secretary, and even to the Secretary of State, more than was necessary?—I should like to have had rather a longer experience before expressing a positive opinion. Probably too much does come before these highest officials, though it must be remembered that sometimes questions which may not seem very important in themselves become important as precedents.

27,928. Eliminating those questions, is there not a vast quantity of questions that the messenger almost, if he was an attentive person, might deal with?—I think there are a great many legal or semi-legal questions which need not go to the Under Secretary or to the Secretary of State. Such matters have now been partly provided for by the establishment of a legal adviser, who constitutes a sort of legal department. Small legal questions used to be a considerable addition to the diplomatic work which used to be done by Sir Julian Pauncefote.

Mr. J. Bryce, M.P.

13 Dec. 1889.

27,929. But you did not feel yourself that questions came to you that ought to have been decided by somebody of less rank and public responsibility than yourself?—There were, no doubt, a certain number of such questions coming to me which need not have come. They did not take much time, because they always came up with the minute from the department which had dealt with them, and one could, generally speaking, run through them pretty quickly, and unless one saw any strong reason to dissent, one adopted the conclusions at which the department had arrived.

27,930. Do you think the majority of those papers might not just as well have gone from the first-class clerk or the assistant secretary, who put that minute upon them there and then to the copying-room instead of coming to you?—I think a good many might certainly, but I should make the remark still more with reference to the work of the Secretary of State. I mean that I think the Secretary of State is far more overloaded with work than the Parliamentary Under Secretary.

27,931. How does that come about?—The old traditions of the office require an enormous number of things to be settled by him, and he has to spend a great deal of precious time in receiving the visits of foreign envoys.

27,931*a*. (*Chairman.*) I do not want to lead you too much. Will you please take another point?—There is one point, of not very great importance, but of some importance, which has often been raised, and that is as regards the hours of the Foreign Office and the amount of work that the men do. I should like to say that I formed a very high impression of the public spirit of the men in the Foreign Office, and that I am not at all prepared to say that there would be any gain in holding them more closely to particular hours. I think that there is a remarkably good *esprit de corps* in the office, an idea that the men are bound to do their best for the office and its work, and, therefore, to lay down a hard and fast line that everybody must be there as the clock was striking 11 or 12 would not, I think, really improve the efficiency of the office.

27,932. (*Mr. Freeman-Mitford.*) And would destroy the *esprit de corps?*—The *esprit de corps* might be affected. Then again a great deal of the work can only be done in the afternoon.

27,933. You do not object to the general rule that the hours expected of a man in the office should be seven, do you?—No, I do not. I should not say that was too much.

27,934. (*Lord Lingen.*) Why do you say a good deal of the work could only be done in the afternoon?—Partly on account of parliamentary work, partly on account of the Secretary of State. The Secretary of State is taken up during the hours from 2 to 4, or even to 5, very largely with receiving the ambassadors. He very often is not able to give the finishing touch to his despatch or to settle a point until the ambassadors have left him, and then the work has to come down into the departments, and the despatch has to be copied, and perhaps sent off by the evening post. It would be a little difficult to shift that to earlier in the day. Sometimes it is not till the afternoon that a question turns up which may suddenly be brought before the House of Commons as late as 6 or 7 o'clock the same day.

27,935. Yes that, but is not there a great deal of routine work which if it is to be disposed of without delay must be disposed of in the other and earlier part of the day?—No doubt, but there is so much liability of a pressure coming on in the afternoon that I do not think it would be quite safe to make a general rule that men should go away at 5 or 6 o'clock.

27,936. I am speaking of the hours at which they should come. The more the later hours were occupied and pressed upon the more need, I should have thought, there was of making the most of the hours before?—

Mr. J Bryce, M.P.

13 Dec. 1889.

So far as I could observe the regular work was disposed of pretty fairly between 12 o'clock and 4 or 5, and then the later hours were reserved for pressing work which came in suddenly, or for Secretary of State's work, which could not well be done earlier.

27,937. (*Chairman.*) Have you yourself experienced any inconvenience, or is it within your knowledge that there has been any inconvenience, from the fact that the letters are not opened sufficiently early in the morning?—I ought to have mentioned that all telegrams, which are now the most important things, are opened in the morning. They used to send up the box containing telegrams to one's house between 10 and 11 o'clock.

27,938. (*Lord Lingen.*) Have they still resident clerks in the Foreign Office?—They had in 1886, in my time. The Foreign Office is managed upon a somewhat different social line from what, I suppose, prevails in most of the other offices. The men, I think, make their arrangements more as friends, about the time when they should take their vacations, and they help one another in their work, and so on. I think, if you endeavoured to lay down hard and fast lines about all these matters you might lose as much as you would gain.

27,939. (*Chairman.*) What would you say, so far as you are able to form an opinion about the numbers of the staff of the Foreign Office. Has it occurred to you that the office is over manned?—It is not at all over-manned upon its present arrangements, that is to say, I think there is enough work, quite enough work, for all the men who are there.

27,940. (*Mr. Fowler.*) What do you mean by present arrangements?—The classification of the clerks, and the very limited employment of lower division clerks. I believe that if you employed lower division clerks more largely, you could reduce the number of establishment clerks.

27,941. (*Chairman.*) How would that reduce the number of the establishment. It might reduce the number of upper clerks and increase the number of the lowest, that I understand, but if every man's time is now wholly employed some one must continue to do the work?—I was speaking more with reference to expenditure than with reference to numbers. I think that you might require to have as many clerks in the office, but I am thinking of what it would cost the country.

27,942. (*Mr. Fowler.*) What I understand you to say, is that the upper branch, the diplomatic branch of the establishment is, perhaps, rather lavish, and that the under department is more meagre?—Yes, I think that is so, but I want to convey a distinct opinion that the establishment clerks are now fully employed. It is not by no means an idle office.

27,943. But they are doing work which a less highly trained man would be competent to do?—A great deal of it.

27,944. (*Lord Lingen.*) Might we say generally, just to put it in a few words, that by the employment of lower division clerks you look largely to what in other offices is called a copying room?—Yes.

27,945. (*Chairman.*) Upon the establishment itself of the Foreign Office does any other point occur to you?—Perhaps I might say that I think the position of Legal Adviser might with advantage be improved. He has got a great deal of work, I might say very heavy work, to do, and a great deal of it is rather responsible work. I think with reference to what Lord Lingen said it is chiefly as regards legal questions that decisions might be made without coming to the Secretary of State, or under secretaries. It is chiefly to legal questions that that remark seems applicable. Many of the questions might be finally settled, I think, by the Legal Adviser.

27,946. The position of legal adviser has recently been altered, has not it?—He was introduced in 1886. A committee met then, of which I think you were a member.

27,947. I was not a member, but I think you did me the honour to ask me to sit upon it?—The Committee sat in 1886, and I recollect that Mr. Fowler was a member. In consequence of its recommendation a legal adviser was appointed. I am not sure that the position of that branch might not be somewhat improved—that his salary might be raised—and that he might even be given an assistant, but before pronouncing a positive opinion, one would like to know how far the clerical work of the establishment has increased; it was increasing at that time.

27,948. (*Mr. Freeman-Mitford.*) Was not that practically the case when Sir Julian Pauncefote was first appointed to the office; was not he appointed as legal Assistant Under Secretary of State?—Yes.

27,949. Then when he became permanent Under Secretary of State, it was found to be unnecessary to have so large a legal department, was not that the case?—What happened then was, that Sir Julian Pauncefote continued to do the legal work.

27,950. Only to a certain extent?—To a very large extent he continued to do it. He was, of course, a very able and competent lawyer; indeed, I think he was the only lawyer in the office, and therefore a great deal of the legal work fell to him. He found it very laborious, and it was partly in order to relieve him from this and set him free for diplomatic work that the legal adviser was appointed in 1886.

27,951. Then he became freed from the legal work?—Except so far as it was necessary for him to give an opinion in the graver class of cases.

27,952. (*Lord Lingen.*) The legal adviser at present is not and does not act as an assistant under secretary of State; he does not sign letters?—No.

27,953. He is the adviser on letters that come to him from the various branches of the office?—I believe that is so, but these arrangements have been made since I left the office. I wish to make it clear that I think that what Lord Lingen said as to leaving subordinate authorities to deal finally with certain matters could be done more in the direction of legal work than in any other.

27,954. (*Mr. Fowler.*) You are aware that at the Colonial Office they have a legal assistant under secretary?—Yes.

27,955. May we say that you think there should be a permanent officer, say, a legal assistant under secretary at the Foreign Office?—Yes.

27,956. (*Mr. Freeman-Mitford.*) As there was before?—As there was before.

27,957. (*Lord Lingen.*) That is an exceedingly important point, and I should like to reserve to myself the utmost possible discretion upon it, but I am immediately in pursuit of another question, which is, that I think you used the expression that the case might finally be decided by the legal adviser. I apprehend that the practice of the Foreign Office, as everywhere else, would be that the minute would come back from the legal adviser to the corresponding officer who had sent it to him, and that then if that corresponding officer accepted the opinion of the legal adviser, that would be embodied in a letter, for which the corresponding officer would remain responsible to the Secretary of State?—I conceive that to be the practice of the office.

27,958. I only wanted the fact, I do not wish to go on with it now?—I think that is so.

27,959. (*Chairman.*) Perhaps we might leave the Foreign Office establishment itself now, unless you have any other point upon that?—Yes; a very small point. I think, if the Commission is anxious to have methods of saving suggested to it, that there might be a certain amount of saving in the Foreign Office printing. There is rather more printing than is necessary, particularly in what are called covering letters. The Foreign Office is in the habit of receiving a great many documents from abroad. It sends these to the different departments of the State, and sends with each of them a regular covering letter, which sometimes is printed and sometimes is lithographed, if I remember rightly, and one of the under-secretaries signs it. It would be sufficient for the purpose to have a mere slip attached to the paper to say it is sent with the compliments of the Foreign Office to such and such a department. In the whole year the number of those things is so great, that a sensible saving might be effected in this direction.

27,960. We might perhaps take as the next heading the diplomatic establishments abroad. What suggestion have you to make from your experience about those?—As I have said already, it would be a better plan on the whole to unite the Foreign Office at home with the diplomatic service, and have but one service and one competition.

27,961. Do you think that the ground of expense ought not to stand in the way?—I think not. I should

have said that the diplomatic service does not seem to me to be as strong intellectually as the Foreign Office is.

27,962. Do you mean that the men who enter the diplomatic service are not so strong intellectually?—Speaking generally, I do not think they are. I do not think our diplomatic service, taking it all in all, is so strong in the way either of intellect or of general knowledge and accomplishment as it ought to be, or as a country like this requires.

27,963. You have formed, as I understand, a higher opinion of the men who enter the political department or the commercial department at home in the Foreign Office; those are, in your opinion, as I understand you to say, the men who might very fairly come up to the standard which you think our diplomatic reprentatives ought to reach?—Certainly.

27,964. Is there any other point you wish to speak about?—I should like to add to that that I think the conditions for a young diplomatist abroad are even more unfavourable than they are for a Foreign Office clerk at home. A great deal of his work is the dullest possible work, it is copying papers that come into the embassy or legation, and it is the deciphering of telegrams which is very tedious, and, to a large extent, mechanical. Of course he learns the contents of the telegrams, but still the work itself is exceedingly tedious and laborious. The young man is abroad almost alone, with little to sustain his intellectual life or rouse him to effort, possibly with little cultivated society to mix in, and it is extremely difficult for him not to fall into comparatively idle and desultory habits. I believe if you gave him in the early part of his career more responsible work, or, at any rate, work more calculated to call out his powers, and relieved him of this mechanical work, you would very much improve the quality of the diplomatic service. I do not at all mean to disparage the natural ability of the men who go into the diplomatic service, but I think that they seriously suffer from the unfavourable conditions under which their first years of service are passed.

27,965. Perhaps you would be kind enough to continue your observations in your own way?—I have heard that in France they have got a regular staff in their embassies and legations of what are called chancellors, people who are permanently at the embassies or legations, and who keep the archives and do the registration work, and that in that department the copying and mechanical part of the work is done, and that there are persons corresponding, so to speak, to our lower division clerks who do the copying work in those French embassies, and so relieve the junior members of the regular service from it.

27,966. (*Lord Lingen.*) Would you say there would be no reason why a lower division clerk should not be detached from the Foreign Office with proper allowances and sent to Vienna, for instance?—I do not see why not.

27,967. And be in the chancery there?—And be in the chancery there. There are considerable advantages in keeping a permanent chancellor who carries on his knowledge of local circumstances from one time to another, although the ambassadors, and the secretaries, and the attachés may change.

27,968. (*Chairman.*) Have you any other point upon our services abroad to bring before us?—In connexion with that I may say, it is a comparatively small matter, but I think it is worth considering, that there is an establishment at Constantinople for training young men in Oriental languages. They begin their training in Oriental languages there. It was strongly represented to me while I was at the Foreign Office by one or two eminent Oriental scholars at the universities, particularly by the distinguished man who is now professor of Arabic at Cambridge, that it would be much better if the men got the first part of their training in Oriental languages at home. It is much easier to get good grammatical instruction in Arabic, or Turkish, or Persian in England than it is in Constantinople, and the men would be better fitted than at present to use their time abroad to advantage if they began those studies here before going out to Constantinople.

27,969. (*Chairman.*) Then would you suggest the doing away with the college?—I should not suggest doing away with it altogether, but I would suggest that the men should not go out there until they have made some progress in the study of the languages at home.

27,970. (*Lord Lingen.*) I suppose they pick up what may be called the colloquial and commercial part of the languages better on the spot, but for the grammar and all the foundation of matters that would be better learned at the universities?—Certainly, or even in London.

27,971. Or even in London?—Yes.

27,972. (*Chairman.*) It is open competition now, is not it, for that service?—I think so.

27,973. (*Mr. Freeman-Mitford.*) Would it not be rather a good thing to make them compete in those studies?—It would.

27,974. (*Chairman.*) That is just the point I was going to take up, you might advance the age a year or to such an age as you thought the men would be likely to acquire some knowledge of those languages in, and then have a good competition in that language?—That would be an improvement on the present system.

27,975. Something analogous to the Indian Civil Service?—I should think that would be better than the present plan.

27,976. Perhaps now you would take any other point that you have?—I am not sure whether changes might not be profitably made in the present classification of embassies and legations. There are some posts which at present are considered inferior because they are only legations, but which in reality are quite as important as some that are ranked as embassies. I say that specially in reference to Washington.

27,977. (*Lord Lingen.*) Does it make a difference in the pay?—It makes a difference in the pay, and also in the rank which a man holds in the service.

27,978. (*Mr. Freeman-Mitford.*) Is not Washington always looked upon as a very high post indeed?—It is, but the salary and the titular rank are not in proportion to the real importance of the post.

27,979. (*Chairman.*) Is not that a proposition which comes to this: that one or two legations, you have named one, a very important one, should be constituted into embassies. I do not understand you to say that there should be no such distinction as that between embassies and legations?—No. I suppose that is a thing one could not easily change, as against the general practice of civilised Powers who do recognise such distinctions.

27,980. (*Lord Lingen.*) It is chiefly a matter of Courts, I suppose?—Chiefly a matter of Courts.

27,981. (*Mr. Fowler.*) Do you think our interests at Washington are of more importance than our interests at Madrid?—Infinitely.

27,982. The one is an embassy and the other is a legation?—Yes; I do not think you can have too able a man at Washington; you ought really to send one of the three best men you possess to Washington, and pay proportionately.

27,983. (*Chairman.*) I think we must still ask you to be kind enough to go on with your points?—I think the only other point I have to mention, is with regard to the consular service.

27,984. I believe you paid special attention to that in the year 1886, when there were special instructions issued to the consuls?—With regard to their functions in the promotion of British trade, yes. We went into the subject carefully, and I wrote a memorandum upon it, and Lord Rosebery issued a despatch.

27,985. Perhaps you would state shortly, in your own words, what your general impression was of the consular system generally, and of the services which they rendered to British trade?—There are many able and capable men among the consuls, but it would be better if the consular service became a regular service, and if the Secretary of State was not entitled, as he is now, to appoint anybody whatever to it. I can understand that, as in the case of the higher diplomatic appointments, sometimes it may possibly be desirable to go outside the regular service, but one would like to restrict a little what may be called the absolutely free patronage of the Secretary of State, by requiring him, if he appointed anybody outside the consular service, to justify the appointment, to record in a minute the special reasons why he thought he ought to go outside the service. At present a person who has no experience of any kind, and who has no claim except private friendship, may be appointed by the Secretary of State to an important consulship

Mr. J. Bryce, M.P.
13 Dec. 1889.

27,986. (*Mr. Fowler.*) Or political influence?—Or political influence, no doubt, and the consequence is that the consuls are discouraged, and the service is not always what it might be.

27,987. (*Mr. Harvey.*) And without an examination?—I think there is a low qualifying examination.

27,988. (*Chairman.*) Have you considered at all how in practice such a service could be started; you would not, I suppose, go so far as to make it interchangeable or amalgamate it with the diplomatic service?—No, probably not; although every now and then, of course, appointments are made from the diplomatic service into the consular, and *vice versâ*.

27,989. (*Lord Lingen.*) Not very often *vice versâ*?—Much less frequently.

27,990. (*Chairman.*) As a general rule, you believe, I imagine, that the men who go out as consuls are not exactly the same men whom you would employ in the diplomatic service?—I should not say there was any very marked inferiority in point of ability.

27,991. I did not refer to inferiority. I was rather thinking of men who would have turned their attention to a different class of subjects?—No doubt the consul is naturally much more conversant, or ought to be much more conversant, with commercial questions.

27,992. Have you at all framed an idea of how it would be best to constitute such a consular service; would you appoint at the same age as young men now enter diplomacy, for instance, and if so, would you not have to provide a good many more paid posts?—I think I should be disposed to have somewhat different limits of age for the diplomatic service, and of course one would probably have a different kind of examination.

27,993. Do you mean you would rather appoint older men?—One might leave it open to older men certainly, and have a different kind of examination for entrance, if it was made competitive, as it probably would be.

27,994. Have you at all considered the salaries which are attached to the different posts, and whether those salaries are capable of modification, so that there should be more of a ladder, and an ascending scale, and more promotion in the consular service; because it has rather been represented to us that one of the difficulties in establishing such a new consular service was partly the difficulty that I have mentioned?—I should think that the scale of salaries was capable of revision with advantage, and, in fact, it must needs be revised from time to time, because the relative importance of consulates varies very much according to the amount of trade, and even to the opening of ocean communications. There are some consulates which were important 30 years ago, but which are now of little or no importance, and there are others growing every day.

27,995. We were further told that a consul becomes very much more valuable from a lengthy residence in the place, as he gains a greater experience of the trade?—No doubt he does, and that is one reason why, if possible, the scale of salaries ought to be considered, so that he may not have a motive for leaving a place, where, in point of fact, he has become important, to go to another place where, perhaps, the duties are a little lighter, and the salary rather higher.

27,995*a*. (*Lord Lingen.*) Would a system of this sort work: Suppose there was a regular scale beginning at a low salary and going up through classes progressively, we will say, to a high one; still you would have to classify the stations something in this way:—This station only requires a third-class consul; this wants a second; and this wants a first. It seems to me that unless you made the salaries quite independent of where the man was, you must have removal as part promotion?—Certainly; very often, naturally, you would have removal, but probably such a system of classes would answer, only you would require from time to time to revise your classification, and to move a particular consulate from one class into another according to the importance of the work.

27,996. Yes, not only the consulate, but the consul, would not you?—Certainly; but I should assume that in proportion to a man's ability and length of service he would be entitled to promotion.

27,997. But if you had a very able man at an obscure post, you would not pay the consul at that obscure post in reference to the consul's ability instead of the importance of the place, would you?—Certainly not; you would naturally endeavour to get promotion for him so as to place him where his powers might have a larger scope.

27,998. Just so; that is all I wanted to have clear; that in any reasonably economical system of consular promotion, change of post must be an element?—Certainly.

27,999. (*Chairman.*) That is one way in which you think our commercial interests would be better served abroad?—Yes, by improving the service altogether, and by making it more a service of merit and less a matter in which mere favour prevails.

28,000. The value of our consular reports has very much improved, has it not, since 1886?—I believe it has.

28,001. Has it come within your knowledge outside the Foreign Office and in connexion with Parliament that there have been many complaints from chambers of commerce with reference to the want of assistance given by our consuls to trade abroad as compared with that given by the consuls of other great Powers?—There were such complaints up to 1886. I cannot say much about what has happened since 1886. My impression was that the complaints ceased then, and that it was felt that the despatch which Lord Rosebery issued was practically satisfactory, and that the consuls were beginning to do more for our trade interests. Judging from what has passed in the House of Commons, I should say there have been far fewer complaints made there, far fewer questions put to the Government on the subject, than there were before 1886; so, I suppose, that the commercial community is better satisfied. Perhaps I ought to add that there was a recommendation made in 1886 that there should be appointed another commercial attaché, similar to Mr. Crowe. You know, I daresay, that Mr. Crowe is our commercial attaché in Paris, and sends us reports of the greatest possible value, relating to trade in France. I believe that another one has been appointed since, who resides chiefly in Russia, and goes sometimes to the countries in North-western Asia. Probably we ought to have a third, perhaps, a person whose business it should be to travel about and to report from time to time upon places where there are openings for trade, upon the commercial laws of different countries, and so on.

28,002. You mean a sort of roving commissioner?—Exactly, a roving commissioner.

28,003. The suggestion has been made to us that two such men might be desirable, and it is suggested that one might possibly be in Russia and another more in Western Europe, but the suggestion was made to us rather on the lines that somebody holding the position of consul-general would be better than a commercial attaché; do you attach any importance to that?—No. I do not care particularly which he is called, but I think he ought to have a sphere larger than any one particular country, and that it ought to be his function to travel about from country to country and make his observations generally, instead of remaining fixed at one place.

28,004. Do you think that the work that has been done by these gentlemen whom you have named—the two commercial attachés—has been such that further appointments of the same kind would be of great use to British trade?—I would not suggest more than one such further appointment at present, but I think there is work for one more.

28,005. (*Lord Lingen.*) Why do you want this travelling consul instead of your local consuls, supposing they had adequate commercial knowledge?—In the first place, the local consul in many places has so much daily hard work to do, particularly with regard to shipping, that he hardly has time for these things, and, in the next place, I think a man travelling about from place to place, seeing how trade goes on here and there, would learn a good deal more than a man fixed at one spot.

28,006. (*Chairman.*) You want to have a man, in fact, who is free from all routine duty, whose special business it is to go within certain limits of country to any points where there is a development of trade, and where there are opportunities for British industry?—Yes, and I should say not merely for matters of trade, but very often the Foreign Office might require from him a report upon some questions of commercial law or even upon a law relating to some industrial or social matter. A demand for information upon legislation in other countries, upon social and industrial questions has grown up

recently, and special reports of that kind could be better furnished by a man who travels about from place to place than by one of our consuls who cannot, without great inconvenience to the trading community, leave the place where he is permanently stationed.

28,007. Within your experience of the Foreign Office, were the relations of the commercial department of the Foreign Office with traders generally and with the Board of Trade also, in your opinion, such as they ought to be?—The time I had was too short to enable me to form a sufficient judgment, but certainly they used to come pretty frequently to the commercial department with their complaints and suggestions; we always tried to satisfy them, and I think we adopted the policy of encouraging them to come as much as possible. We thought it could do nothing but good to listen. At that time we arranged with the Board of Trade to start what is now called the Board of Trade Journal, in which reports appear which were sent by the Foreign Office to the Board of Trade for publication. Lord Rosebery instituted the system of publishing the reports that came from abroad much more quickly than had been the case previously. I think it is entirely in the interests of the commercial department and in the interests of British trade that there should be a very cordial and constant relation between the merchants and the chambers of commerce on the one hand, and the commercial department of the Foreign Office on the other.

28,008. (*Lord Lingen.*) At important commercial centres do you think that our consul has adequate assistance for purely routine duties, or that a greater amount of such assistance might be advantageously given to him?—I can only speak as to that in cases where in travelling I have called upon our consul and asked him about his work. It varies very much in different places, but in the large ports he may be too hardly pressed by routine duties, and might with advantage have some assistance.

28,009. (*Chairman.*) Does any other point occur to you with reference to the consuls?—There was a question which caused us a good deal of difficulty, as to the extent to which the British representatives abroad should be encouraged to promote actively the interests of British trade by recommending and helping merchants. I do not know whether that matter is before the Commission. We took the view that, speaking generally, a British representative abroad ought not to allow himself to become anything like a mere trading agent; that he would rather lower the dignity of the country, and his own position, if he did what the representatives of some foreign powers seem to have done in that way; but that when in countries like China and Japan he found the representatives of other powers were pressing the interests of their countrymen, he might legitimately apply similar pressure so long as he did not——

28,010. Directly identify himself with any particular firm?—Directly identify himself with the merchant, or give any ground for the notion that his post was sinking into a mere trading agency.

28,011. It has been suggested to us that there might be more opportunities taken of sending home samples or specimens of new manufactures in different countries, which appears to be the practice very much with foreign consuls, and also that we might have some museum at home for such samples?—It was, I think, suggested to the consuls in 1886, that they should do so; and my impression is, that some of them were then doing so, and that they have continued to do so more since that time. I can certainly see no objection on the ground which is stated for their doing that, because the practice would not in any way complicate them with a foreign State where they represented us, and it would be for the advantage of our merchants.

28,012. (*Mr. Harvey.*) When you were at the Foreign Office, did you look yourself at the consular reports, or had you not time to see them yourself?—I looked at a good many, but not at all of them.

28,013. Did you see those that were sent in from the consular officers in Turkey who were appointed under open competition, as well as those that came from the ordinary consular service?—I presume that I must have read a number of them. I generally endeavoured at any rate to glance over them.

28,014. Have you formed any opinion as to whether those that were sent in by a man who had been selected by open competition were better, or worse, or on a level with those that came in from other officers?—I cannot say at this distance of time that I formed any distinct opinion on that point.

Mr. J. Bryce, M.P.

13 Dec. 1889.

28,015. A wish has been expressed to make the consular service a service in the stricter sense of the term; and evidence has been given to us that, in the case of the arrangement made by Sir Philip Currie for the admission of men selected by open competition for interpretorial and consular work, these appointments of assistant vice-consuls have had to be made in order to set up the ladder which was necessary in connexion with the scheme of that examination, and it was not quite clear that it was absolutely necessary for these posts for the work itself, and the point before us was that any attempt to make the consular service more of a service might lead, therefore, to considerable increase of expenditure; have you any opinion to express upon that?—I think we might profitably, with a view to the constant growth of trade and the increasing stress of competition, spend a little more on the consular service than we spend now; and I think, if it was directed to the proper places, it would really be reproductive expenditure; but I was not contemplating, in suggesting these changes in the consular service, anything which would require a very great increase in the vote. It is not necessary.

28,016. Do you think that a very considerable modification of the present system of appointment would be attended with marked advantages?—Certainly. It ought to be added, you know, that in many parts of the world a consul, particularly in the East, has very important functions besides his commercial ones.

28,017. With regard to the evidence you gave as to the intelligence department of the Foreign Office, will you be good enough to tell me what is the record kept now in the Foreign Office of a presidential message from the President of the United States?—I am not aware that any record would be kept, except what happened to be included in a despatch from the minister at Washington. The minister at Washington would probably in one of his despatches call attention to points in the presidential message which seemed to him to have an interest for this country, but there would not be anything beyond that which would bring it formally under the notice of the Foreign Office.

28,018. Supposing, we will say, to take one very obvious instance, some point in connexion with the silver question came before the Foreign Office, and it were necessary to know what successive presidents had said about silver in their respective messages; what would be the course that you would take as under secretary; would you send to the library to see all the presidential messages?—I should not think, unless the librarian filed the newspapers, that there would necessarily be anything in the library upon the subject, except that there might, of course, be despatches from Washington, containing remarks upon particular Bills that have been introduced with regard to silver, or upon particular Acts that have been passed, or upon references to the matter in presidential messages; and it might be that it would be worth while to look through those despatches; but after all, you know, in matters of that kind the record in the public press is a much more complete record than what the library would have from despatches, and it is not a matter with regard to which secrecy would signify.

28,019. That is want I want to get at, whether the public press is not in itself a better record of these things than the intelligence department would be?—The difficulty about the public press is that there is too much of it; it requires selection. If it was the business of somebody in the librarian's department to pay attention to a current question like the silver question, which affects us, to make well selected cuttings from newspapers relating to it, or to keep copies, perhaps, of Bills which purported to deal with it, and to have at hand the Acts, such as the Bland Act, which touch upon the subject, there would be a reservoir of information upon the question which I do not suppose exists at this moment.

28,020. Would you think it advisable that all the political staff of the Foreign Office should pass through the commercial department as well as through the librarian's department?—Yes, I think there would be some advantage in it. I do not know that it would be a matter of very great importance.

28,021. As I understand your point with reference to the political establishment, it is that by taking off some of the less important work which is now

Mr. J. Bryce, M.P.

13 Dec. 1889.

discharged by the members of that establishment and giving it to lower division clerks there is enough better work to be done to fill up the time of the clerical establishment?—That is my view.

28,022. Have you formed any opinion as to what were the causes of the superiority of the Foreign Office men over the diplomatic men, which you observed?—The field of choice is larger, because a candidate for the diplomatic service at present must prove that he has got independent means sufficient to support him for the first two years, if I remember right, and there is no similar requirement in the case of the Foreign Office. The position in the Foreign Office is on the whole rather more attractive; it does not involve absence from England, the prospect of promotion seems to be thought rather better, and, therefore, a somewhat abler class of men go in for the Foreign Office posts.

28,023. And, therefore, you think that it would be better, do you, to abolish that regulation as to diplomatic appointments and the possession of private mean in order to get a better choice of men?—Yes, it is prejudicial in narrowing your choice because, it excludes men who might otherwise choose a diplomatic career.

28,024. Would not that very much add to the cost of the diplomatic service?—It would do so to some extent, I have no doubt, but there are branches in the diplomatic service in which you might effect retrenchments.

28,025. Could you indicate those?—Some embassies have salaries disproportionate to the importance of the work that they now discharge. I am not prepared at this moment to give you a specific scheme on the subject, but I believe you might effect entrenchments. Another reason why the Foreign Office is better manned may be found in the fact that the conditions of the first years of a young diplomatist's life are more unfavourable to him than those of the Foreign Office, and if he is as good as the Foreign Office men to begin with, the probability is that the conditions under which he is do not leave him quite so intelligent and assiduous a man at the end of five or six years as the Foreign Office clerk would probably be.

28,026. Do you think there is sufficient work of a better character to give him in the ordinary embassies or legations?—Of course the embassies or legations vary very much, and it is hardly possible to speak generally. In some of them there is, certainly.

28,027. In what form would that be; would it be report writing for information to be sent home?—Yes, report writing, and very often reading through the material which comes into the office, and making a précis of part of it, and conducting a good deal of the minor correspondence that some of the embassies and legations have to conduct. For instance, take the case of Constantinople, the ambassador at Constantinople is practically the centre of a great ramification of consuls over the Turkish East, and there is a great deal of work to be done there which does not necessarily consist in writing reports home.

28,028. When you were at the Foreign Office, did you have any complaints from British merchants as to the action of our consuls abroad?—Yes, we sometimes had; they sometimes complained that their interests were not pushed sufficiently, and very often when we had them up and cross-examined them about their complaints, it has turned out that they wanted things which we did not think they ought to require the consuls to do for them. I should say that, taking it all in all, the consuls then were doing their duty fairly.

28,029. (*Mr. Freeman-Mitford.*) You were asked just now a question as to what record there would remain of a presidential message; would not it be the duty of the minister at Washington to forward a copy of the presidential message on which he would base his despatch?—Probably he would send a copy of it, but I can conceive of his merely referring to the message, and assuming that it would be read here.

28,030. You do not know, as a matter of fact, whether he does send copies of such documents?—I think no presidential message was delivered during the time that I was in the Foreign Office.

28,031. You are in favour of amalgamating the two services, the diplomatic service with the Foreign Office, and at the same time you are in favour of reducing the number of political clerks in the Foreign Office and substituting lower division clerks for them?—Yes.

28,032. Would not the amalgamation of the diplomatic service with the Foreign Office render it rather more difficult to reduce the number of the political clerks, because you must retain a certain backbone of clerks so as to train the people who come from abroad in the practice of the office?—Certainly; but then one would regulate the number of clerks you had in the office by the exigencies of the public service for the time being. One would keep so many at work in the Foreign Office of those who belong to the general service, as the condition of the Foreign Office then required.

28,033. How would you meet the monetary difficulty, the fact that men come into the Foreign Office without sufficient means, as they would say, themselves, to be sent abroad?—I think there is always a certain number of men who rather prefer to go abroad, a certain number of men who prefer to stay at home, and a certain number of men who have knowledge of some particular foreign country or countries. I do not think there would be any very great difficulty found in sorting out the men and sending them to their proper places.

28,034. Perhaps not, but supposing them to have sufficient money to enable them to meet the extra expense of going abroad, would you see any difficulty in that?—The extra expense involved in going abroad does not seem to me to be great. Except in a few countries a man could practically live as cheaply abroad as he could live in London.

28,035. Do you think so?—I am not sure; but, speaking generally, I think it would be scarcely more costly for him to live abroad than it would be for him to live in London. An attaché, hitherto, has been expected, perhaps, to keep up a little bit more of a social position abroad than a Foreign Office clerk need do in England; but the salaries that we pay are, I believe, larger than the salaries which are paid by most continental countries, and I do not think an English attaché or secretary of legation ought to be expected to live any better than a German or a Frenchman who was living in the same capital.

28,036. There are certain capitals to which it would be absolutely out of the question to send a man unless he had private means, and some of those places would be very important ones, such as St. Petersburg?—No doubt Berlin and Washington and St. Petersburg are expensive places. I think you might fairly assume that there would always be a considerable number of men going into the diplomatic establishment who had private means.

28,037. I am talking about sending the clerks out?—I mean, you might assume that a considerable number of men who belonged to what may be called the general service would have means, and then, to some extent, you would send those men out; but it would not follow that the salary which a man received while he was here was the same as the salary which he would receive when he went abroad. You might have to fix it on a somewhat different scale.

28,038. But it would doubtless be a very great advantage to amalgamate the two services, would it not?—Taking it all in all, I think it would.

28,039. (*Lord Lingen.*) Do the ministers report periodically, in the sense of fixed periods, or only at discretion?—I should say at discretion, in proportion to the importance of the matters that are then pending.

28,040. They might, of course, be reporting daily, but in an ordinary embassy would they report once a month?—If by "report" you mean sending a despatch, they would report much more frequently from all the European embassies. From the great European embassies there would be a despatch, generally speaking, every two or three days, sometimes oftener.

28,041. Then, as a matter of fact, would not one of those despatches contain multitudinous enclosures?—Sometimes they would, but not always.

28,042. Would not they ordinarily contain newspapers?—Occasionally, but, I should say, speaking from recollection, not ordinarily.

28,043. They would not usually send newspapers, but that might be a good way of giving an idea of what the opinion was in the countries where they were?—Every now and then they would; there are countries, certainly, from which they used to send, now and then, newspaper articles, often as a sort of text upon which to comment in the despatch. The practice of different ambassadors varied much in that respect.

28,044. On the whole, your experience, I gather from your answers, would be that the press did not figure very largely in the enclosures that they send home?—I should say not very largely.

28,045. Is the first appointment to a mission abroad that of an unpaid attaché?—I believe so.

28,046. And that would extend over as long a period as two years?—On an average it would be two years.

28,047. And a young man is not told off for that service unless he can show that during those two years he can maintain himself?—That is so.

28,048. The difference between the Foreign Office in London and a mission abroad would be this: that at the Foreign Office in London, except so far as it rested with himself, his work would be as it were in a chancery; I mean his work would be clerical in London?—Yes.

28,049. When he gets abroad, I suppose, if he is a rising diplomatist, the chancery, even if it is the beginning, is not the end of what is expected of him: his power of picking up information in society and mixing with people would enter very largely into his chances, would it not?—In some embassies and legations it would, but very unequally as between different ones. There are some where there would not be much to be picked up in that way.

28,050. Do you think that a young man whose ability was great in compiling memoranda, and even drafting despatches, and whose talent generally lay in the chancery, and did not lie in the drawing-room, would have a fair chance in a foreign embassy?—Certainly; in some embassies a very good chance indeed.

28,051. In enough embassies to encourage the growth of that sort of men in the diplomatic service?—Certainly.

28,052. Now to go to another subject, there is a pretty frequent change by opening new consular stations, and suppressing others?—Yes, that is so.

28,053. When one station is suppressed and another is opened, what usually is the ground on which that change is made?—That is a matter which would be better answered by any one whose experience has extended over a very much longer period than mine; but I should say, judging not so much from what I saw in the Foreign Office as from what I have been in the habit of watching while in Parliament, that it would depend in most cases upon the commercial importance of the place, particularly on the rising or falling trade of the port: but in some parts of the world, particularly in the Levant and all those regions, it would depend also upon political reasons, and I am inclined to think that there we have even passed over one or two places where for political reasons it might be very desirable to have a representative.

28,054. For political reasons?—Yes.

28,055. I should like to confine myself just for the present to the commercial places. Are chambers of commerce in sufficiently frequent communication, either with the Board of Trade or with the Foreign Office, to ensure their having something to say as to the opening of a new consular station?—Any representation that they would make would be certain to be attended to; that is to say, it would be considered. Of course the question of expense would have to be taken into account by the Foreign Office, but I am sure it would be considered. I do not recollect many representations from Chambers of Commerce upon that point.

28,056. Do you recollect one?—I cannot at the moment recollect any one. I am bound to say that Chambers of Commerce were not so fertile in suggestions as you might have expected, or as they supposed themselves to be. They were very apt to say, you ought to do this or to do that generally; but I do not think they make so many specific suggestions as we might reasonably have expected from them.

28,057. (*Mr. Harvey.*) Do you regard them as representative of the trade in the places for which they spoke?—In some cases you may say they are, but there is a good deal of difference between different towns in that respect.

28,058. (*Mr. Lawson.*) You have expressed yourself in favour of the amalgamation of the diplomatic service with the Foreign Office service. I suppose you are aware that this step was constantly mooted before the last Committee of the House of Commons which investigated the question in 1871?—I have heard that it was before them.

28,059. I find Mr. Anderson, who is now Sir Percy Anderson, said that he should like to see the services amalgamated, as far as possible, up to the higher grades; do you know whether anything more has been done to carry out the feeling which then seems to have existed, though it does not appear in the report of the committee beyond a recommendation as to interchange of secretaries?—I do not think the interchange is confined entirely to secretaries, is it? I am not sure, but I think there has been a growing tendency to interchange. I think it is more and more the custom for diplomatists to come back and work for a little while in the Foreign Office, perhaps for a year or two; and it is more and more the custom for Foreign Office clerks to go abroad and work for a time there. I know one or two cases in my own experience of extremely capable Foreign Office men whom an ambassador abroad has wished to have, and who have gone and helped him for some time abroad. There is one such clerk at present in Paris.

Mr. J. Bryce, M.P.

13 Dec. 1889

28,060. But in that case the Foreign Office clerk is only temporarily lent to the embassy, I believe?—That is so.

28,061. The French system, I believe, is one of entire amalgamation?—I believe so.

28,062. Do you think the mere possibility of interchange is not sufficient?—I do not wish to speak very positively about it, because what I say on this is subject to the shortness of my own experience; but it seems to me that the arguments in favour of the amalgamation are, on the whole, the stronger.

28,063. You are quite convinced that by imposing a property disqualification you do not get a class of men intellectually so capable for the diplomatic service as for the Foreign Office service?—I think that is one of the elements which prevents the diplomatic service from having all that it ought to have.

28,064. Do you think it is the determining factor?—Not altogether. I think that the work of the Foreign Office would by many people be considered more interesting, and that many people would prefer to live at home rather than to go abroad. Thus, even apart from the requirement of having independent means, there would be a tendency to prefer the Foreign Office.

28,065. But yet I believe it is the case that some of the gentlemen who have interchanged of late years have been among some of the ablest of the Foreign Office clerks?—Certainly, that is quite true.

28,066. You would argue, I daresay, from the fact that those Foreign Office clerks do interchange without any property qualification being asked from them, that if it is the case with them it should also be with men on their entrance to do so?—Yes, I think so.

28,067. Are you aware that in some portion of the foreign service, the French particularly, the secretaries of legations and embassies live at the embassy house?—That is the case in some of the French embassies; I am not sure about the others; I believe they do.

28,068. You are not prepared to express an opinion, perhaps, as to whether anything can be done in this direction for our service?—It depends so much upon the policy of having an official residence for the ambassador or minister. I believe it is, generally speaking, our policy to have an official residence, and of course if there be an official residence for the ambassador or minister, it would probably be a convenience to have provision made for accommodating one other member of the staff, but that is not a matter I have thought much upon.

28,069. Of course the cost of living, and particularly the cost of lodging, is an argument that is used in defence of enforcing this property qualification?—Yes; no doubt in many capitals the cost of lodging is a very large item. I believe it is so, for instance, in Washington and Berlin.

28,070. And in St. Petersburg?—And in St. Petersburg.

28,071. As a matter of fact, as perhaps you may be aware, our attachés do live in a house at Therapia, in a sort of annexe to the building?—At Therapia they do, but I do not think that is the case in Pera.

28,072. You do not make any suggestion as to that?—No, I make no suggestion.

28,073. I do not know whether you said you were in favour of limited competition in the Foreign Office, as opposed to absolutely open competition?—I think that practically we get just as good men as we could get

Mr. J. Bryce, M.P.

13 Dec. 1889.

under the system of open competition. There are some reasons, peculiar to the Foreign Office, for maintaining the present system.

28,074. If the services were amalgamated, would you suggest the same system as we have now for the Foreign Office clerks?—In regard to the details of the subjects for examination, I do not wish to express any opinion whether there should be a more difficult examination; but I think an examination of the same character should apply to both.

28,075. Do you think this examination lends itself too much to cramming?—Not more than any other Civil Service examination; of course it is very difficult to defeat cramming for any examination.

28,076. There is a movement at present, I believe, to make some of the examinations—certainly for the young men—more similar in character to the character of the Oxford schools examination; have you thought of that with reference to the Foreign Office clerks?—I should say, speaking generally, that the Foreign Office clerk's examination has this great merit, that the number of candidates who come up at any one time has not generally been very large. It is very much easier for an examiner to form a just judgment as between five or six, or even between eight and ten men, than it is when he has to pick out the best men from a much larger number. When there is a small number of men to examine, if you are a careful examiner, you are able to get a distinct personal impression of each of them. His work gives you an idea of his character and capacities, which you are not able to get when the number of the candidates is so large that you are obliged to rely almost entirely upon your marks. I feel, therefore, that an examination is a totally different thing for a small number of candidates from what it would be for a large number of candidates, and much more satisfactory in the former case.

28,077. Do you think the conditions make it possible that there can be any judicious selection from the list of names of candidates?—I am not quite sure that I understand you.

28,078. Do you think the system of nomination by the Secretary of State gives you the best class of men for the purpose?—I should like to see the nomination by the Secretary of State given rather more freely, perhaps, than it is now, and rather more as a matter of course to any person, whether privately known to him or not, who is able to satisfy him that he is a competent person. The advantage of keeping up this nomination by the Secretary of State is that you thereby leave to him a sort of discretion, which under the system of absolutely open competition you could not give, for ascertaining various things about the individual man which examination cannot test, but which in the case of work like the Foreign Office and diplomatic work it must be important to be satisfied upon.

28,079. We have had it upon the high authority of Sir Philip Currie that, of course, what you must look to in a case of this kind is a man's family connections. Do you think that as a test is sufficient?—I would not, perhaps, use exactly that expression. I do not say that a man's connections might not possibly be of some consequence; but I should look rather to the whole character and tone of the man. I should rather prefer to put it that way—that his tone and the impression that he makes on those who have known him during the time of his education might fairly come in in determining whether he was a person whom you would admit into a very confidential position.

28,080. You were acquainted, I suppose, while you were at the Foreign Office, with the young men who had entered under limited competition?—Certainly.

28,081. Did you see anything of the work of those who had just joined the office?—Little or nothing of those who had just joined, but something of those who had been there some five or six years.

28,082. It has been alleged that for the first six months or a year a man is employed in sticking one piece of paper on to another and work of a kindred sort?—I should think that is very likely to be true. I cannot say of my own knowledge, not knowing much about the elementary work of the departments.

28,083. It is a rule of the department that the attachés, when they are nominated to a legation or embassy, should go for six months, I believe, to the Foreign Office; do you think that during that time the fullest opportunity is taken of making them acquainted with the real Foreign Office work?—I do not know quite enough of the inside of the departments to say.

28,084. Do you then tell us that young men entering the diplomatic service, supposing the two systems are kept apart, should serve at the Foreign Office?—Yes.

28,085. Do you think the period might be extended to a year?—Yes, I think so. Of course it partly depends on the kind of work they are given. I should rate the value of their presence at the Foreign Office more highly if they were given some work besides purely mechanical work.

28,086. You were discussing questions of hours at the Foreign Office, do you think that the present hours are suited to the convenience of the commercial community?—I never heard any complaints on that subject. The commercial department opens a little earlier—I think an hour earlier than the others, and it did not seem to me that there was any great disposition on the part of the merchants who came to come in the morning; they mostly called between two and four o'clock.

28,087. I understand that when you advocate some system of copying by clerks in the Foreign Office of a lower grade than the upper division, you would not be in favour of the appointment of temporary men?—You might perhaps want now and then to employ temporary men if you had a great pressure of business, but certainly it is not every kind of work that you would give to them; you would be careful what sort of work you gave them. I do not know that it ought to be necessary to do so, but perhaps it would be necessary to do it all by your permanent staff.

28,088. By your lower division clerks?—Yes; but I can conceive an exceptional pressure when you might have to take on some.

28,089. These lower division clerks of course would do part of the routine work, of what is called the diplomatic establishment of the Foreign Office?—Certainly.

28,090. That would be introducing a new principle into the organisation?—It would only extend what is already done in the commercial department, and in the treaty department, to the purely political departments.

28,091. Do you see any necessity for keeping three departments—the chief clerk's department, the librarian's department, and the treaty department, absolutely distinct from the large geographical divisions, eastern, western, and American?—I can conceive that there might be some advantages in keeping the chief clerk's department distinct to some extent. The case is not quite the same with regard to the librarian's and the treaty department. The work in the chief clerk's department is to a very large extent accountant's work.

28,092. Do not you believe that a greater interchange of men of all ranks between these departments would be a benefit to them and to the service?—On the whole it would, but again I do not think that would apply so much to the chief clerk's office.

28,093. Excepting that, that leaves the consular, the commercial, the librarian's, and the treaty departments?—Yes.

28,094. Did you have anything to say while you were examining into the question of consuls as to the separation of the China and Japan service from the rest of the consular business?—We felt that there were some circumstances or conditions peculiar to China and Japan, perhaps I ought to say to Siam and also to some of the other countries in those regions which did not quite apply to the rest of the world. We felt, for instance, that one might allow our representatives a somewhat greater latitude as regards pushing British trade there than would be desirable in some other countries; but I do not remember that we saw any reason for creating a separate and distinct consular department for those countries.

28,095. At the present moment they are tacked on to the American department, though the diplomatic establishment is quite distinct from the consular and commercial departments, and Mr. Kennedy told us that he thought it would be an advantage if for trade purposes they came to him. Would you be disposed to take that view?—I see some advantages in having them under the commercial department, but I am not prepared to express a positive opinion about it.

28,096. With reference to the diplomatic service, did you see the reports that were made by secretaries on

their own initiative on financial and commercial subjects?—Yes, sometimes.

28,097. Generally speaking, do you think they were up to the proper standard?—They varied very much. Some of them were. I believe some of them less so.

28,098. Do you believe it is a good system that a young diplomat should recommend himself to the notice of the Foreign Office by means of these voluntary reports?—It is a very desirable thing to encourage him in it.

28,099. Do you think they ought to send in voluntarily, or that there ought to be a more regular system?—They ought to be distinctly encouraged to do so: but my impression is that they are so encouraged at present, and that if they send in good reports they feel that it helps their promotion. If they have been slack in doing it, then they ought to be, no doubt, stirred up still more.

28,100. I believe, as a matter of fact, there is a considerable difference between different embassies in this respect?—There is.

28,101. Do not you think it does not always depend upon the circumstances of trade, and that in some countries where there is less English trade you might get a great many more reports than you would from others where the English trade interests were more important?—Certainly it depends a great deal upon the ambassador how far he keeps his young men up to the mark; and it depends also on the amount of ambition and mental activity of the subordinate members of the ambassador's staff.

28,102. The question I put to you is, for a practical recommendation, do you think that the Foreign Office ought rather to insist upon than to encourage reports being sent in of this kind from any country where England is interested in a particular movement in trade?—Yes, I should go so far as that. I do not say that you could lay down an absolutely positive rule as to the number of reports that should be sent because that would vary from time to time; but you may say that they ought to insist.

28,103. You said you sent out in 1886 a memorandum to our representatives abroad enumerating different points that you thought information ought to be given upon in connection with commerce?—I drew up the memorandum, and I believe it was sent out. The memorandum was drawn up rather for the purposes of the Foreign Office, but, as I say, it was ultimately sent out.

28,104. I asked that because I wanted to know how far you had considered the advantage of getting reports upon Colonial and Indian as well as upon English trade?—I think that certainly the principles we laid down would have applied to Colonial and Indian affairs. I forget whether it was specially adverted to, but certainly it was within one's contemplation that the reports should be prepared with a view to the benefit of the mercantile community in India and the Colonies as well as at home. I forget whether we particularly recommended it. Of course, it would not fall within the purview of the Foreign Office to report upon the phenomena of trade in India and in the Colonies. That would depend upon the India Office and the Colonial Office. But I understand you to refer to reports upon the trade of India and the Colonies with foreign countries.

28,105. Do you think in this respect there is sufficient communication between the Indian and Colonial Governments and the Foreign Office at home?—I should say that the India and Colonial Offices, when they get reports relating to trade would rather communicate with the Board of Trade, perhaps, than with the Foreign Office. You see, in the distribution of functions that was thought desirable in 1886, it was agreed that the Board of Trade should issue the trade journal and should publish the reports there. We thought that perhaps it would be better for the India and Colonial Offices to send whatever they received that might be useful over to the Board of Trade, and then that they would be published in the journal; but if the India and Colonial offices were to publish reports about trade received from India or the Colonies that would also be of service to our merchants.

28,105*a*. You are not aware whether that has been done?—No, I do not recollect any such Colonial or Indian reports ever being laid before Parliament.

28,106. Do you think it might be of advantage to the Colonies, especially where there is an opening for trade, of these certificates were always communicated to the Colonial and Indian Governments?—I am not sure that I understand by whom you propose the reports to be prepared.

Mr. J. Bryce M.P.

13 Dec. 1889.

28,107. I mean they would come from the commercial department of the Foreign Office?—Yes, but from whom?

28,108. From the consuls and representatives of England abroad?—Probably the Foreign Office would send across to the India Office or Colonial Office anything which it thought would be of interest for transmission abroad. I seem to recollect occasions upon which, upon getting a report, one said, the Indian Office would like to see this, or the Colonial Office would like to see this, and we sent it across to them, and it is doubtless desirable that this should be done.

28,108*a*. Mr. Law, who is the commercial attaché at St. Petersburg and in the East, has suggested that that would perhaps be the function of a commercial intelligence department of the Imperial Institute; but do not you think, without dealing of course with a question quite outside our purview, that it would be an advantage to the Foreign Office itself if the commercial department of the Foreign Office took steps to give our Colonies full information?—Certainly.

28,109. In respect to the consular service I should like to ask you whether you do not think that the best method of giving encouragement to zealous work and so forth would be by appointing the men who are chosen, I do not say in what way first of all, to vice-consulates everywhere, as in the case of Turkey now; and then that they should look to promotion to higher posts as they do not now?—Yes, I think you ought to have a career in the consular service which would be open to merit, and which would encourage a man of energy and ambition to enter it; that I suppose is the point of your question.

28,110. Yes. Do you think there is a sufficient career, open to a man now?—No, there is not. A man who has done very good work and hard work, at perhaps a poorly paid consulate, is now liable when a better consulate falls vacant to see it filled by the nomination of a person unconnected with the service and who has no claim, except some personal acquaintance or some political influence with the Secretary of State.

28,111. We have heard that the limit of age is between 25 and 50; do you think that is too wide?—Speaking generally it is too wide, though I can imagine a case in which a man might be quite fit for work at 50.

28,112. It has been stated that it would be a very bad thing to remove consuls from one country to another and lose the advantage of their local knowledge; do you attach much importance to that argument?—I do not think it is so important as it would be to provide a career. Sometimes it is important to utilize a man in the same country; perhaps you would promote him from a less important to a more important place in the same country. You might take him from a small port in France, for instance, and make him consul at Marseilles or Bordeaux. On the whole, I should care most about making the service one in which merit would be certain to be rewarded.

28,113. Then there is rather a small point, but I put it to a previous witness; I see that in the report of the Committee of 1872 on the consular services, the opinion of a witness is quoted with approval, that advancement in social rank and position and every chance of honorary rewards and marks of distinction should be applied to the consular service. Do you think that has been done sufficiently?—It is done to some extent, but of course the whole question of the way in which we bestow titular rewards is a very large one. I think it is done every now and again; I have known several cases of consuls having been made K.C.M.G.'s in respect of their services.

28,114. Really?—Yes.

28,115. Do not you think there is too much disposition to treat the consular service as a rather inferior one?—There is still some disposition, but it is diminishing; and on the whole there is more disposition to recognise the work of consuls and to treat them as equals than there was formerly.

28,116. Do not you think a full use ought to be made of the opportunities which are enjoyed in this country of bestowing this sort of distinction for good work as in the diplomatic service is done frequently?—Yes, no

Mr. J. Bryce, M.P.

13 Dec. 1889.

doubt. A consul ought to feel that in that way also his work would be recognised.

28,117. Do you believe it would be possible to make more promotions from the consular to the diplomatic service or do you think the disadvantages counterbalance the advantages?—I do not know that I should make frequent changes from the one to the other. There is a good deal of difference between the work, but again that would depend, you know, upon where the consul had been placed. In some parts of the world the consul has much more in the nature of diplomatic work to do than he has in others. A consul in the Levant or a consul in some parts of the further East has work to do which is political as well as commercial.

28,118. Of course, you would be of opinion that you might require a different class of man for Turkey and the corps of student interpreters from what you would use for France or for the United States?—Yes, you would choose a different sort of man.

28,119. Dealing with that class of man, do you believe that taking into consideration all the trade interests at stake, that you would get a better class of man from the commercial class (from men who had been in commercial business) than from young men of general competence entering by examination?—All things considered, it would be better to take the latter class and to expect them to qualify themselves specially for the work. Now, and then, of course you might get a very good man engaged in commerce who would go over, but, as a rule, the man who would leave commerce to be a consul would be a man who had failed in commerce, and although occassionally he might have the qualities that would enable him to succeed as a consul, but do not tend to success in commerce, it would be rather dangerous to contemplate many cases of that kind.

28,120. I dare say you would be of opinion then that the competent young man would pick up sufficient commercial knowledge to supply all the information that is necessary?—Yes, there is no mystery in it. At the ports, and any other places where he would be stationed, he would associate largely with commercial people; a good deal of his work is commercial, and he would soon gain a knowledge of commercial affairs.

28,121. You have been in Asia Minor, I know; are you able to speak as to this new class of student interpreters, and of the men who have been made consuls and vice-consuls under that system?—I know two or three of them personally, but I cannot say that I have had occasion to see their work.

28,122. You do not think that under any conditions it would be possible to assimilate the English system to the German system, which gives assistance to trade?—I am not sure that I know what you mean by "assistance."

28,123. Assistance to a particular firm by getting them contracts for all kinds of business?—As soon as you did it to particular firms you would immediately excite complaints on the part of other British firms. It never would do for a consul to associate himself with one particular British firm at a foreign port to the exclusion of others; he would incur the suspicion of having a personal interest in it, and he would excite a great deal of ill-feeling on the part of other British merchants.

28,124. Do you think the consuls go far enough in that direction now?—I cannot say that I know exactly what has passed in the last three years, but I should say that in 1886 it seemed to me that they did not go quite so far as they might have gone, and we encouraged them to go a little bit further, not of course in the way of pushing the business of particular British firms, but in the way of gaining information, sending home reports, and so on; in fact, helping British trade generally.

28,125. Supposing a museum for the display of samples were established under the Imperial Institute, or that there were local museums in connexion with chambers of commerce, would you see any objection to supplying them with samples?—By all means let them send the samples, they would be very useful.

28,126. You would not contemplate the Foreign Office itself asking Parliament to make a contribution towards setting up these museums?—No.

28,127. Would you see any harm in a suggestion which has been strongly recommended to us, that there should be consuls-general appointed in Europe to the principal countries (or groups of countries, such as Spain and Portugal) to overlook the general consular work and to make general reports upon trade?—I cannot say I have considered that. On the spur of the moment, I am not prepared to say that it is necessary.

28,128. (*Lord Lingen.*) The question was put to you, I think, in a former part of this examination, that if we were to consolidate the junior diplomatic and the junior political service in the Foreign Office, we should increase the expense, because we should lose the unpaid unattached service, and we should give a higher rate of pay all round than is now given in the diplomatic service. If that was the whole proposal, that possibly would be so, but I wanted to ask whether what you contemplate was this: that supposing at this moment you have got the full junior upper division staff at the Foreign Office, and you have got a full staff diplomatically abroad, there is no room, so to speak, to bring a diplomatist into the Foreign Office unless you take the political men abroad, and that, as far as that goes, there would be a certain increase of expenditure. But supposing that we carried out the reductions that you spoke of in the political department in the Foreign Office by a larger employment of lower division clerks, we should then make room for bringing in these diplomatic young gentlemen, and the extra cost that was incurred upon them would be compensated by the saving of employing a greater number of lower division clerks. I want clearly to ascertain whether that was what you contemplated?—So far as I understand the point you put, I think that represents what I meant to say.

28,129. To put it more shortly, that whereas we should be paying more for our diplomatic service, we should be paying less if that was regarded as part of the general charge for our political service in the Foreign Office, and that we might, more or less, approach to a balance between those two—the increase on the one hand, and the reduction on the other?—I think that would be so.

28,130. When you contemplated bringing the diplomatic junior officers into the Foreign Office, on the pay of the Foreign Office, did you contemplate that as a permanent change of their pay if they went back to the diplomatic service, or only as a temporary one while they were at the Foreign Office?—Only the latter.

28,131. Then there is one other question that one of your answers has suggested to me. Are all the reports that come from the secretaries of legation on financial and commercial matters printed as a matter of course, or only the best of them?—Speaking from recollection, I do not think they are all printed.

28,132. They are not all printed?—I believe not.

28,133. To a certain extent the reports from these secretaries would be side by side with reports, very likely on the same matters, from the consular officers, would they not?—It was generally endeavoured to have some distinction between the matters on which the consuls would report and the matters on which legations or embassies would report, but they might every now and then happen to coincide or overlap.

28,134. I think one of the questions that was suggested was connected with bi-metallism, silver, and so on; would that naturally be the subject of a secretarial or of a consular report?—Secretarial.

28,135. It would be somewhat accidental if the secretary of a legation knew anything about this subject, except so far as he got it up *ad hoc*, would not it?—He could hardly help hearing these subjects talked about in Washington, at any rate, but certainly it would not be any part of his general diplomatic duties to be a proficient in it.

28,136. (*Mr. Lawson.*) Is there not this difference between a consular and a diplomatic report on trade subjects, that the diplomatic report would probably cover the whole country, or a considerable part of it, whereas the consular would be confined to a particular district?—That would be so, speaking generally, though, of course, the consul might define his own district as being a very wide one, but, speaking generally, what you say would truly represent the distinction.

The witness withdrew.

Adjourned.

EIGHTY-SECOND DAY.

7, Whitehall Place, Westminster, S.W., Thursday, February 13th, 1890.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN, K.C.B.
Lord BASING.
Mr. A. S. HARVEY.
Mr. H. L. W. LAWSON, M.P.
Mr. J. W. MACLURE, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Mr. ROBERT GIFFEN, LL.D., re-called and further examined.

Mr. R. Giffen, LL.D.

13 Feb. 1890.

28,137. (*Chairman.*) You are, as we know, one of the Assistant Secretaries of the Board of Trade, and are, I think, chiefly responsible for all the trade publications and statistics of the Board of Trade?—That is so.

28,138. That is, generally, your position in the Board of Trade?—That is my position in the Board of Trade.

28,139. In the course of our inquiry into the Foreign Office we have received some evidence as to the assistance given to the commerce of Great Britain by the action of the Foreign Office, and we are anxious, therefore, to hear what are your views about the present arrangements, which were made, I think, in 1872 between the Foreign Office and the Board of Trade with reference to the commercial interests of our country?—That is what I understand I have been asked to come for. I have notes here of the different points where the Board of Trade and the Foreign Office now come into contact. I may say, with reference to the arrangements of 1872, which were made before I was appointed to the Board of Trade, that no change of staff was made at the time in the Board of Trade. Sir Louis Mallet's appointment as head of the commercial department came to an end by his being appointed to the India Office, and substantially what happened was that that post at the Board of Trade was not continued, and that instead of that, an officer was appointed at the Foreign Office to take the initiative in commercial negotiations which Sir Louis Mallet, at the Board of Trade, had been taking. Whatever may have been intended besides that, so far as any staff was required for the purpose, does not seem to have been carried out, because the compilation of tariffs, foreign and colonial, and the publication of such information remained at the Board of Trade after 1872 exactly as it had been before that date. There were two departments at the Board of Trade at that time, the statistical and the commercial; and after the transfer in 1872 to the Foreign Office, these two departments were combined, and called the statistical and commercial department. That was the office to which I myself was appointed in 1876, four years after the transfer of 1872 had been carried out. I may say that a few years after that date, when some changes were made in the Board of Trade, the so-called statistical and commercial department was named exclusively the commercial department, because as far as could be judged, the properly commercial work of the Board of Trade had increased since 1876, and not diminished. That is the history of the departments. The Board of Trade and its commercial department, and the commercial and other departments (because it is not solely the commercial department) of the Foreign Office come in contact at several points, and I will take these points in their order. The first one is one with which we have nothing to do at the commercial department of the Board of Trade, and that is the business which the consuls transact for the Board of Trade in connexion with shipping. This is a very large business, and is a business naturally which falls to the marine department of the Board of Trade; and the marine department, and to some extent the finance department of the Board of Trade, correspond directly with consuls all over the world in regard to this shipping business which consists of the mortgage and register of ships, the engagement and discharge of crews in foreign ports, the relief of distressed seamen, the management of the naval reserve, and various other matters which lead to very considerable correspondence. This is carried on directly between the Board of Trade and the consuls; and, excepting where questions of discipline and various other questions of principle arise where a correspondence must necessarily go on with the Foreign Office, all this business goes on directly between the Board of Trade and the consuls; and I understand that it goes on very satisfactorily indeed.

28,140. When you say the Board of Trade direct the correspondence on one side, you mean the marine department of the Board of Trade, and not your department, do you not?—Not my department; this is not what my department has to do with. I am speaking for the Board of Trade at present, and this is what I am able to tell you. Then where we, in our department, come in contact with the Foreign Office and especially with the commercial department of the Foreign Office is, first of all, in respect of the compilation and publication of foreign tariffs and the giving of information to the Government in respect of these matters. This is done, as it always was done, by the Board of Trade. Amongst the things which we publish is the import duty return published at various intervals; the last one was published in 1885, and we are about to publish another in the course of the present session. Then we have special returns at different times of which I have one or two specimens here; and within the last three years, since the "Board of Trade Journal" has been issued, we have published a great amount of information respecting foreign tariffs, and respecting changes in these tariffs in the "Board of Trade Journal." A copy of the journal is here, to be referred to if any of the Commissioners would like to look at it. I may say that we publish both the tariffs themselves and notices of changes in the tariffs from time to time. During the last 12 months we have published the tariffs of the chief non-European States, such as: Guadeloupe, Trinidad, Nicaragua, Tasmania, Queensland, Fiji, Gaboon, Martinique, and the Argentine Republic. Lately, commencing in January, we have been publishing a special tariff return connected with cotton tissues and other matters of that kind. We are continually publishing tariff returns and notices. In this business we come in contact with the commercial department of the Foreign Office which supplies us with a good deal of the raw material which we work up in these different publications, but I should say by no means the whole of the raw material. If you look through the issues of the "Board of Trade Journal" you will find that a great amount of information as to changes in tariff is derived from sources independent of the Foreign Office. On this matter (this is one of the things that I may say on behalf of the Board of Trade) we should like to get more from the Foreign Office than we do. On the whole we should prefer in this matter to get our information to a very large extent through the agents of the British Government exclusively, partly because we think we ought to get it more expeditiously in that way, and also that the information would then be more trustworthy, and because we should like to publish it exactly as our own information.

28,141. Do you mean that you would like the consuls to send this information?—The consuls or the secretaries of legation or whoever it is that communicates this information to the Foreign Office should do so. I believe that we get whatever comes to the Foreign Office—that is our understanding; but we should like to get it more quickly and more systematically, and we should like to depend upon the Foreign

Mr. R. Giffen, LL.D.

13 Feb. 1890.

Office source altogether, or nearly altogether, for getting the information.

28,142. As I understand it is sent to you from the Foreign Office in an altogether undigested form?—Altogether undigested.

28,143. And you work up that material together with such other raw material bearing upon the subject which the Board of Trade obtains from other quarter?—That is so. I may say that sometimes the working-up of this information is a very serious matter indeed. Some of the foreign tariffs are simple, but others are not so simple, and require a good deal of working up. I remember on an occasion, on receiving remonstrances from a very important political personage about things not being published, handing to him the tariff of a particular country, and asking if he, or any other man, could construe what that tariff meant. The thing is really so very difficult sometimes; the public have no idea of what the complication of foreign tariffs is.

28,144. You say you would like to get this information more quickly, and that I understand to be the gist of your recommendation?—Yes.

28,145. Having regard to the dates of the reports and of the other information which is sent in by our servants abroad, does much delay take place in the Foreign Office?—The delay is not in the Foreign Office, I think; it is in their not getting it from their agents abroad. If we could get it all quickly and systematically, and publish it in the "Board of Trade Journal," it would be very convenient indeed. I think we succeed very well as it is from the miscellaneous sources, but on the whole we should prefer to get it from the Foreign Office. Perhaps I ought to say with regard to the tariffs and various other questions that frequently these are matters upon which we have to inform the Government through our own president. The information is sometimes very important indeed. The next matter in which we come in contact with the commercial department of the Foreign Office is in the compilation and publication of our foreign trade statistics. The principal publication which we have is the statistical abstract for the principal and other foreign countries which gives the information to a certain extent for foreign countries which we give in our own statistical abstract for the United Kingdom, and which we give in the corresponding statistical abstract for the colonies. In addition to that we publish at different times a great deal of special information about the trade statistics of foreign countries; for instance, we have published two very elaborate reports about the trade in sugar. Not very long ago, to mention a special report of this kind, we published statistical tables relating to the progress of the foreign trade of the United Kingdom and of other countries in recent years. That was a very elaborate comparison of the trade of England, France, the United States, and Germany, as tested not by their own trade statistics, but by the trade statistics of every other foreign country with which all these countries dealt. That was a comparison to bring to a test a great deal of what has been discussed lately as to German trade displacing English trade in foreign countries, that being a topic which was very much enlarged upon in the different consular reports, and as to which it was thought at the Board of Trade desirable that we should put the facts in a general shape, as we did not altogether agree with the opinion and effect which these consular reports were producing. That was entirely done from the foreign trade volumes in the possession of the Board of Trade. Then these trade statistics enable us to give evidence on various important matters, such as the progress of foreign trade in comparison with our own, as to which I gave evidence before the Trade Depression Commission; as to currency matters, respecting which I gave evidence to the Gold and Silver Commission; and quite lately, to mention a recent case, as to the emigration and immigration of foreigners, which touches all commercial subjects in various ways, and as to which I gave evidence before the Select Committee of the House of Commons last session. As regards all this trade statistical information, I do not think we have anything to suggest, because we only get it very partially through the Foreign Office. To a very large extent our sources of information are independent of the Foreign Office, and we must always be comparatively independent. We do get a good many volumes through the Foreign Office, but the Foreign Office merely transmits to us the raw material in that way, and as to that, I have no suggestion to make. Then the next matter in which we come in contact with the Foreign Office is especially with reference to the "Board of Trade Journal." I have referred already to tariffs and publications respecting tariffs, which also affect the "Board of Trade Journal" to some extent. But there is a good deal of other information as to trade matters in the "Board of Trade Journal," such as extracts from diplomatic and consular reports, and matters of that kind. Here too, the remark I have to make is that we are not exclusively dependent upon the Foreign Office for this information. In the current number of the journal we have about five pages of matter of this kind from the Foreign Office, and at the same time we have about 40 pages, I should think, of similar matter, which we obtain partly from foreign journals, foreign official publications, foreign consular reports, and sources of that kind.

28,146. (*Lord Lingen.*) I should like to observe for one moment that we are inquiring into the Foreign Office now, and that I do not quite see how all these parts of your administration, in which you say you are independent of the Foreign Office, affect our present inquiry?—I am pointing out, I think, that we receive a certain amount of the information from the Foreign Office, and where we are in contact with it; and the remark I am going to make upon this very point just now is, that we should like to get more from the Foreign Office than we do.

28,147. (*Chairman.*) I understand your point is this: You point to the "Board of Trade Journal," and state that you give in the current number five or six pages of extracts from the diplomatic and consular reports, and then when you come to the heading, No. 8 in the list of contents, entitled "Miscellaneous Trade Notices," you state that those trade notices are not derived from the Foreign Office?—They are not derived from the Foreign Office.

28,148. Are the Foreign Office in possession of information similar to that which is given under head 8 which they could supply to you?—We think so. I mention the "Board of Trade Journal" in this way because it was started in conjunction with the Foreign Office, and partly to carry out an idea which was common to both departments at the time. I remember it is mentioned by Professor Bryce in his memorandum which he wrote about that time, and that the Foreign Office promised very strongly indeed to assist the Board of Trade in respect of extracts from diplomatic and consular reports to be published in the journal. We think, at the Board of Trade, that it would be very useful to enlarge this kind of information in the journal. We also are rather inclined to think that in the early days of the journal we got more information of this kind from the Foreign Office than we have lately done.

28,149. You get all the diplomatic and consular reports sent to you direct, do not you?—After they are printed—sometimes we get them before.

28,150. One can easily understand that you would not get the diplomatic reports, but all the consular reports on trade are sent immediately, on being printed, to the Board of Trade, are they not?—Not all on being printed; I do not think they come to us as a rule until they are issued to the public. As you see we do get some extracts from the Foreign Office, and we should like to have more; we think it would be advantageous that they should come in that way, and we think probably that it would relieve, to some extent, the bulk of the consular reports which the Foreign Office publish.

28,151. As we know the "Board of Trade Journal" comes out monthly?—Yes.

28,152. Would you like to be able to publish in that journal some of the extracts from the consular reports which appear to be especially interesting, instead of publishing the consular reports first as a whole and then publishing transcripts in the "Board of Trade Journal," is that your recommendation?—We have very few transcripts of what has actually been published. We have published transcripts at different times, but there is a great pressure for matter, and we have not understood that the Foreign Office would like us to do that; we have rather had an opinion, perhaps we may have been misinformed, that it would be the other way.

28,153. Who makes the extracts from the diplomatic and consular reports to which you have alluded; are those extracts made under your supervision?—These extracts which we have printed are from reports which are either communicated in writing to the Board of Trade and which we suggest to the Foreign Office should

be extracted, or the matter comes to us from the Foreign Office with a suggestion that it would be suitable for publication in the "Board of Trade Journal."

28,154. And your general representation is a very natural one that you think that possibly the Foreign Office might be able to give you rather more information of that nature than they do?—Yes, and also that that was the idea to some extent with which the "Board of Trade Journal" was started.

28,155. (*Mr. Lawson.*) And that information could be obtained at the Foreign Office by simply carrying out Mr. Bryce's memorandum, I suppose?—That is our opinion—that this is really carrying out what has been an idea common to both the Board of Trade and the Foreign Office.

28,156. (*Chairman.*) Have your Board made representations to the Foreign Office?—That has been a subject of communication and we believe that improvements will take place. We are quite friendly in the matter and we hope that some improvement will take place, but when I am asked the question I think that attention may be called to what is now being done—that is one of the points where we come in contact with the Foreign Office.

28,157. Perhaps you will kindly take another point in which you are in contact with the Foreign Office?—The last point, and perhaps to a certain extent the most important point, is that we give advice and information to the Foreign Office with regard to the negotiation of commercial treaties. I should say, perhaps, not merely directly to the Foreign Office, but we give it to some extent directly to our own chief and it may reach the Foreign Office a little indirectly. The matters are sometimes very urgent and very important. The occasions on which we are consulted by the Foreign Office in these matters are not usually very frequent. The consultation takes place after negotiations have advanced a certain stage, perhaps on some crisis occurring or when it comes near the point of a treaty being drafted, and then we have to consider the papers and make any observations or suggestions. I think there is very frequently something to suggest on the part of the Board of Trade when matters reach us. What we have to say upon this point is that on the whole we think it would be desirable sometimes if we received communications at a somewhat earlier date than we do. We are sometimes placed in a considerable difficulty in dealing with papers which come to us, on account of the want of time in which to deal with them. I believe that the Foreign Office are very often in much the same difficulty themselves when things come to a crisis and have to be decided rather quickly; but we incline to think that on the whole there would be room for more information being given to us at an earlier stage. Of course this is a matter under the present arrangements where the Foreign Office have an absolute initiative and we are perhaps not in a position altogether to judge of the circumstances in which they are placed, but we speak of what we sometimes feel in the department. I should think that we shall be on a better footing in future as it is the wish of the Foreign Office and of the Board of Trade that the communications should be made to us as early as possible. Then I should like to add with reference to the points where the department has been in contact with the Foreign Office, that an officer of the Board of Trade, Mr. Bateman, has been engaged in the principal commercial treaty negotiations. I mention particularly the French treaty, where he was secretary, and the sugar bounties negotiations where he was also engaged as secretary. In other matters, although not officially employed as secretary, he has been very much at the disposal of the Foreign Office although a Board of Trade officer; and a good deal of his time has been spent in the Foreign Office on account of his knowledge of tariffs and trade statistics.

28,158. In that respect then, with reference to the French treaty and the negotiations on the sugar bounties, the suggestions you make about more frequent communication or earlier communication with the Foreign Office have been met?—In all these cases.

28,159. That practice only wants extending a little more to meet your need?—That is really what it comes to, that the elements of a good practice exist in what has been done, and all that we at the Board of Trade suggest is that this should be continued and rather extended if anything, because we do possess a large amount of tariff and statistical information at the Board of Trade which we think is not in the possession of the Foreign Office.

Mr. R. Giffen, LL.D.

13 Feb. 1890.

28,160. I understand that in regard to the negotiation of all commercial treaties frequent communications take place with the Board of Trade from the Foreign Office before the draft is sent to the Board of Trade?—I could not say frequent communications.

28,161. But your suggestion is that the practice which has been followed in the case of the two instances that you have given us might be, with advantage, extended?—That is our opinion, and I believe that is the opinion of the Foreign Office generally too.

28,162. Then I gather from you that your general view of these arrangements as between the Board of Trade and the Foreign Office is that they are in principle quite satisfactory; but that you consider that you might get a little more information from the Foreign Office, and that you might get some of that which you do get, a little more quickly?—I think that is really the view that I have to express. We have no suggestion to make in principle regarding any change in the arrangements.

28,163. Is there any other point or recommendation that you could make which you think might be useful to the Commission in making any suggestions as to the way in which the Foreign Office, in connexion with the Board of Trade might be of assistance to British commerce?—I think that there are one or two points on which we have already made suggestions to the Foreign Office at different times. One is with reference to commercial museums which we have pressed upon the attention of the Foreign Office at different times.

28,164. We have had evidence on that, and I think the Foreign Office is entirely with you upon that matter?—I think we are entirely at one on that point. Another matter on which we have been engaged is with reference to the publication of common information on foreign tariffs. There has been a good deal of negotiation between the different foreign Governments and our own Government, having in view the common publication of tariff returns. The idea is that instead of every country making separate publications, or instead of every country making its own publication with reference to the tariffs of foreign countries, without regard to what is done elsewhere, there should be a sort of central commission which would publish every tariff of every foreign country in four or five languages, and that that should be accessible and convenient to all people concerned. It would not be very costly to each country in particular, and it might be of some use. The initiative was taken in that matter at the Board of Trade, and Mr. Bateman, whom I have already mentioned, attended one of the conferences at Brussels, along with a diplomatic agent of the Foreign Office there. Belgium, I may mention, is the principal moving country in this matter.

28,165. Has that project been assented to?—I believe some progress is being made with it, and I see it mentioned that there is to be another conference in June, but we have not heard of it officially yet.

28,166. (*Mr. Lawson.*) That would simplify your work a good deal, would it not?—We hope that it would improve the work altogether, and the common publication would be a work of reference; it would be a means of getting very authentic information, though it would not supersede our own work.

28,167. (*Mr. Harvey.*) I suppose you yourself see the various consular reports from time to time?—Of course I pay a good deal of attention to the consular reports. I think on that matter I may say that at different times our department has assisted the Foreign Office. Some two or three years ago I was a member of a committee by which various recommendations were made for the improvement of the consular reports, and to a large extent, what was recommended then has been carried out, and has been an improvement. Otherwise, of course, I have paid a great deal of attention to the consular reports at different times, and I was very well acquainted with them before I was appointed to the Board of Trade.

28,168. In the recommendations to which you have referred, was any suggestion made as to the mode in which they should be placed before the public—as to time and form?—At that time there were a good many complaints of delay, and I think that something which passed at the committee helped in that matter a little, because the printers were taking advantage of our

Mr. R. Giffen, LL.D.

13 Feb. 1890.

inexperience in printing matters, and they have been pulled up, and the printing is much more quickly done now, I believe. There are various matters with regard to the presentation to the public, not only of the consular reports, but of the "Board of Trade Journal" and other publications of that kind, which really involve questions between the Stationery Office and the Treasury, as to which I spoke in my former evidence. I think it would be very desirable in the case of publications of that kind—and this is a Board of Trade opinion also, certainly, as to our own publications—that we should have a freer hand in managing the printers, and that we should be able to employ our own printers, and look after the publication ourselves. That, we consider, would be very desirable indeed.

28,169. As to these reports, lately, I believe, the Foreign Office has been in the habit of printing special reports in what one may call the pamphlet form, which are sold at 2*d.* or 3*d.* Have you formed any opinion yourself as to whether that is an improvement on the old system?—I believe that some of them are even pamphlets of smaller dimensions; they are very small indeed. I think the point with regard to this would be that, at certain times of the year when newspapers are not full of matter, and when small reports of that kind happen to be very interesting, the best mode of obtaining publicity would be the circulation of leaflets of that kind, which would get into various newspapers, and so would get about the country very much; but at other times I should say that the publication in the leaflet form is not very good, and is apt not to reach the people so well as it would reach them in a journal like the "Board of Trade Journal." On the whole, I am inclined to think the balance of advantage would be, if a report of that kind is very short, to put it into the "Board of Trade Journal."

28,170. But you would hardly contend, would you, that the "Board of Trade Journal" should embody all the consular reports, or even extracts from them?—No; I speak of the shorter ones especially—they are almost too ephemeral to form part of a volume afterwards.

28,171. (*Mr. Lawson.*) Would not that swell the dimensions of this journal considerably?—There is always a question of publishing the journal fortnightly, or even weekly, which would be a further advantage, we believe, if it could be managed.

28,172. (*Mr. Harvey.*) We have had evidence given us that the publication of commercial reports in the ordinary Foreign Office series is preferred to publication in the "Board of Trade Journal." Do you think that would be so?—All I can say is, that all the accounts we have had of the "Board of Trade Journal" from chambers of commerce and other bodies express unlimited gratification at what they get. I have never heard a question of putting the one thing against the other. Before the "Board of Trade Journal" was published in its present form, and before the publication was actually made, we circulated a specimen number to all the chambers of commerce, and they all expressed their delight and gratification with it, and we have had similar expressions since.

28,173. (*Chairman.*) I daresay it is possible in some quarters that the "Board of Trade Journal," containing, as it does, such a very vast amount of information, may contain rather more than a particular trade or a particular set of men desire, and from that point of view they might prefer the separate issue?—If they see a thing by itself, and would like to keep it, they would find it convenient, no doubt. It is a question of balance of advantage, and there is, no doubt, a certain advantage in the leaflet, especially at certain times of the year, but we think the balance, on the whole, is the other way.

28,174. (*Mr. Harvey.*) Are you, on the whole, satisfied from a commercial standpoint with the consular reports?—I think that what we get now in the present form is better than it has been at any previous time; I think, on the whole (and my memory goes back for more than 20 years), there has been an improvement in the consular reports in many respects. I think very highly, indeed, of the reports on special subjects, which are published from time to time. There are two series; there is the annual series of consular reports, and the reports on special subjects; and I think that the reports on special subjects are often very admirable, indeed.

28,175. Those are the reports, are they not, which generally come out in the leaflet form?—The special subjects do not; the leaflets are more the annual reports, I think. I am not quite clear as to how that would be, but the special reports I speak of are mostly reports of some length that must have taken a good deal of trouble to prepare, and that contain a good deal of information.

28,176. Would you say that, on the whole, very little worthless stuff is published?—I should not like to say that. I am a little doubtful whether a good deal of compression could not be applied to the annual reports, and there are questions of omission, as well as of what is actually published.

28,177. Will you give us an instance of what you mean; you want better editorship. I presume that is what your observation comes to, that you think they might be better edited?—I think on the whole that more attention might be given to selection and compression, and perhaps that there are subjects which might be discussed which are not discussed, but then I do not know that it is altogether a question of editorship. I should not like to put it that way because it may depend actually upon the consular agents whom you have at particular points.

28,178. (*Mr. Lawson.*) Does it spring from the fact that they get too much into a rut?—The annual reports, I think, are very apt to get too much into a rut, and that is one of the dangers of them. I may say that a large amount of the information in the annual reports is very useful at different times, that is with reference to the trade of particular localities. With regard to the arrangement of consular districts, for instance, that is a matter upon which the Foreign Office consult us from time to time; and the information as to localities is one of the things which we have to refer to. In other ways, and sometimes very important ways, the information is very much valued indeed by the Government, and that is to some extent apart from the direct uses the reports may have to commercial people.

28,179. (*Mr. Harvey.*) You would have occasion, of course, to refer very often to the reports of consuls of other countries?—We refer a good deal to them; we have got a great many of them in the office.

28,180. Would you say that the reports of our consuls are on a level with those of the Consuls of the United States for general utility?—I should not be inclined to say that, taking them altogether, those of any other country are superior to our own. I believe that we in this country were the first to commence having them at all. Of course there are great varieties; some reports are very good, some reports are not so good; but I think amongst our own we have a very fair list indeed of excellent reports which can compare with those of other countries.

28,181. Do you think we are as prompt in publication; I observe that the report of the United States consul on the great strike is dated 31st August, and I believe was published in New York, within three weeks from the time—indeed while the strike was actually going on. Do you think that a consular report on a similarly important commercial incident abroad would have been transmitted as rapidly to us?—I have not observed that such rapidity has been shown here; I think sometimes the reports have come to hand, if not quite so quick as that, still with sufficient quickness to be very useful.

28,182. (*Lord Lingen.*) I think I understood you to say that on the subject of shipping and on the subject of seamen your department at the Board of Trade communicates directly with the consuls?—No; what I said was that the Board of Trade communicated directly with the consuls, but it is not my department which does so, it is the Marine Department and the Finance Department which have to do with these matters.

28,183. Would those communications be minuted in those two departments; would they not arise upon suggestions of yours?—The matters are matters of a very large routine indeed. There is a volume of instructions from the Board of Trade issued with the sanction of the Foreign Secretary to the consuls for their direction. Those instructions relate to the administration of shipping: they do not arise in my department.

28,184. I will not pursue that point further, because what I want to get at is this, is there any subject upon which your department communicates directly with the consuls in the same way that the marine and finance departments of your board communicate with

them about shipping and seamen?—No subject in my department.

28,185. That brings us to the point that we have got at the Foreign Office a considerable commercial department having regard to the number and rank of the officers, and we have got at the Board of Trade your department as a commercial and statistical department, do you think if we had a *tabula rasa* that both of those departments are wanted in their present strength?—I do not think there is any duplicate work at all.

28,186. No duplicate work?—No duplicate work.

28,187. What would you say is the exactly dividing line between the commercial department at the Foreign Office, and your department at the Board of Trade?—My department is a department essentially for the reception and publication of information, and for giving information to ministers, members of Parliament, and to other people. The Foreign Office is essentially a department for the business of negotiating commercial treaties.

28,188. But this information which reaches your department comes through the commercial department in the Foreign Office, does not it?—A great deal of it comes through the Foreign Office, and I believe what does come for the most part goes through the commercial department. That is a detail which we do not know much about. But to a large extent it is very much forwarding business, papers are received in the Foreign Office, and are sent on to us as they get them.

28,189. Is the material which reaches the commercial department of the Foreign Office and which comes on to you sent in its crude and native state or is it extracted and edited in any way in the commercial department of the Foreign Office?—It is not extracted or edited in any way.

28,190. The actual documents and reports are sent to you?—The actual documents and reports come to us.

28,191. To that extent then the commercial department of the Foreign Office acts as little more than a post office for the transmission of those reports?—I should say that very often you would have a report transmitted with a request for Board of Trade observations and things of that kind; but that is comparatively occasionally. Where the Foreign Office resembles a post office rather more is with regard to books and foreign official publications and things of that kind which are transmitted to us.

28,192. These consuls, of course, are not only commercial, but diplomatic; and very often extremely important diplomatic officers. When they report upon subjects which are not commercial subjects, I suppose they include those in actually separate reports; do you find political matter in the reports that come to you, or do you find commercial matter only?—As a rule they are commercial matter only. I should say that sometimes we have mixed political and commercial matters, but those are very important and very often confidential matters about which our opinions are invited.

28,193. Why I asked you that question was that I wanted to know whether, as a rule, these reports that come to you have been read over in the commercial department of the Foreign Office?—I should say that they have very probably been read over.

28,194. You think they have?—I should say there is very little doubt of it, and that the Foreign Office know the contents.

28,195. Would you wish to originate any power of direct communication between your department in the Board of Trade and the consular officers, or are you content with the present transmission through the Foreign Office as the exclusive channel through which they reach you?—Subject to the observations I have made, we are quite content with the present arrangements. We make no suggestion of a change of method in principle.

28,196. As you are aware our principal business here is the organisation of the different departments. I gather that the result of your evidence is that you are tolerably well content with the Foreign Office machinery, but that you think it might act a little more rapidly; is that the gist of your evidence?—I think so. In some matters that is really what it comes to, that we might have the tariff changes notified to us more systematically and more completely, and that we might be consulted more early sometimes. Then there is one other point, which is not a very important one. This journal is, of course, produced and published for the benefit of British traders in this country, and to give them all the information I suppose that can be given about the course and volume of trade all the world over.

28,197. To whom does it go?—Very largely to chambers of commerce and to mercantile men who subscribe to it. One of the things of which I rather complain is that the whole of that is managed by another department of the Government and by the printers; and, in that way we know very little about our own journal's circulation. I should like to have a larger share in the management of the printing in that way.

28,198. What department of the Government regulates its circulation?—The Stationery Office and the printers between them. The printers are also the publishers. It is with reference to publishing that I am speaking especially. The Stationery Office has an arrangement with the publishers, a sort of conglomerate arrangement, of which this is a very very small part indeed, and we do not think our business gets attended to. That is what it is.

28,199. What is the price of each number of the journal?—Sixpence; but some copies are circulated gratuitously.

28,200. Should you be willing now to trust to its sale. It seems hardly a thing to circulate gratuitously to such wealthy bodies as you have mentioned?—We do not circulate it gratuitously to those wealthy bodies, except, perhaps, one copy to each chamber of commerce, or something of that kind. The gratuitous circulation is very much to the consuls themselves, and other people abroad.

28,201. Should you be prepared to say that in this country the circulation is mainly a circulation by sale?—In this country, undoubtedly.

28,202. Have you any sort of notion what the circulation would be apart from what you may call the official circulation to chambers of commerce, and so on. What I want to get out by your answer is how far the traders of this country give some evidence that they set a value upon this publication?—I should say from my experience of commercial journals, from what I know independently of my knowledge at the Board of Trade, that the "Board of Trade Journal" has a very fair circulation indeed.

28,203. (*Mr. Lawson.*) As a matter of fact is there any gratuitous circulation except to consuls and official persons?—We get information through the Colonial Office, I may say as well as through the Foreign Office, and we send it to the Agent-General and other people in the colonies. It is a kind of exchange.

28,204. When you speak of the Foreign Office giving you a little more assistance in getting it up, could you tell me whether you think that some of the information which you obtain from foreign newspapers ought to be supplied direct by the consuls? I see, for instance, that foreign newspapers are plentifully quoted in the "Journal"?—We get a great number of foreign newspapers for different purposes in our department, and it seems a pity when we get things of that kind that we should not use them.

28,205. I do not quite understand, and I should like you to tell us what is the further information that could be sent from the Foreign Office to you which you do not get already?—I do not know whether you refer to tariff charges, or to the diplomatic and consular reports.

28,206. I was thinking of the diplomatic and consular reports?—All that we mean is that we should like more of the same quality that we have now. It is only a question of quantity.

28,207-8. And in respect to tariff returns?—In respect to tariffs; taking the case of Mexico, for instance, we have a modification of import duties on beer which we extract from a Mexican publication. Then, again, we have a notice of an export duty on building and cabinet wood which we extract from the "Moniteur Belge," which is a kind of official publication. These are the kind of things that we, on the whole, prefer to have direct from the Foreign Office.

28,209. As a matter of fact, do you think that the consuls are carrying out in fulness of spirit Mr. Bryce's memorandum and Lord Rosebery's instructions in 1886?—I do not know that I am altogether able to speak about that, except as regards consular reports

Mr. R. Giffen, LL.D.

13 Feb. 1890.

and tariff charges, and things of that kind, which come directly before us. I may say, at least, that we have very few complaints at the Board of Trade of deficient consular action in foreign countries.

28,210. Do the reports of the United States consuls cover any more ground than ours?—I do not think so in substance. I have seen a great many reports which deal sometimes, I may say very largely, with special subjects. For instance, some years ago we had a very complete set of reports from the United States about wages all over Europe. A large set of volumes they made.

28,211. We get special information of that kind too if it is applied for, do we not?—Yes, we do. For all practical uses I must say that we have got a very great deal of that kind of information. I may refer to the information about wages which is buried in the appendix to the Report of the Commission on Depression of Trade. It is really most valuable information, and I think it is a pity almost that it was wasted in that form.

28,212. Do the United States consuls, for example, supply information about the hours of labour regularly in their consular reports or is it specially asked for?—I do not think that anything of that kind is done regularly.

28,213. You spoke about the institution of commercial museums, do you favour any grant of public money for the purpose or do you think it ought to be done by the chambers of commerce locally?—We do not favour the subscription of Imperial money. We think it ought to be done locally very much.

28,214. And that facilities only should be given such as we have heard of before?—Such as Professor Bryce speaks of in his memorandum. We ought to give facilities for that undoubtedly.

28,215. Such as Mr. Law, who is our commercial attaché, spoke of the other day?—I do not know what Mr. Law has said; but that is a matter upon which we have expressed our opinion several times.

28,216. (*Lord Basing.*) When these consular reports reach you from the Foreign Office do they come in print as we see them here, or in manuscript?—Sometimes we get them in manuscript and then they are published and are dealt with in the way you see here.

28,217. If in manuscript, I presume you get not the original but a copy?—Sometimes we get the original and then we have to return the original. Sometimes we get copies. Very often we get prints, which are really private, before they are published. The greater part of the consular reports which are published by the Foreign Office we do not get till they are distributed to the public

28,218. If there was anything to be withheld in consequence of its being of a political or diplomatic character, would that appear on the face of the document when it reaches you?—I do not think we have ever had any case of a political document coming to us which was not intended to come.

28,219. If a consul reports on political and diplomatic matters, he would do that in separate despatches?—It would be so, I believe, by the arrangement of the Foreign Office.

The witness withdrew.

Sir Thomas Henry Sanderson, K.C.M.G., C.B., called and examined.

Sir T. H. Sanderson, K.C.M.G., C.B.

28,220. (*Chairman.*) I think your proper title is Assistant Under Secretary at the Foreign Office?—Yes.

28,221. You succeeded, I believe, to the position Sir Philip Currie occupied before Sir Julian Pauncefote went to Washington?—Yes.

28,222. You take specially the American department, do you not?—The American department and the treaty department, which deals with affairs of extradition and nationality, and with treaties, and some other matters.

28,223. Is your general work and responsibility in the office mainly confined to the political work of those departments They are both political departments, are they not?—The treaty department is not what we call one of the political departments; it is not exactly on the same footing as the others. If you refer to page 7 of the Foreign Office List, you will see in what it differs from the other departments.

28,224. Have you anything to do with the general management of the establishment in the Foreign Office?—The actual management of the staff, properly speaking, belongs to the permanent Under Secretary—the head Under Secretary.

28,225. Therefore, with reference to the personnel of the various departments, you would not be in a position to give us any special information, would you?—Except so far as I have myself had considerable experience of it, having been 30 years in the office.

28,226. Then, perhaps, I might ask you, first, from your experience of the clerical establishment of the Foreign Office, whether you have any suggestions to make. I apprehend that you probably have heard the line which has been taken before us by Sir Philip Currie and others?—Yes.

28,227. Do you support the views that have been brought before us?—From what I understand of Sir Philip Currie's evidence I should be, I think, almost entirely in agreement with him. I think it very desirable that the staff of the purely political departments should remain on the footing on which it is now. As I understood, Sir Philip Currie was of opinion that for those departments which did not deal with purely political subjects, if there were lower division clerks who proved themselves qualified for promotion to some of the permanent places in them, that would be a very eligible arrangement.

28,228. Have you seen anything of the work of some of the lower division men who have entered under the Playfair system?—I have not had much opportunity of seeing it. I have seen their handwriting and so forth, and know of their work from hearsay, but I have not had any practical knowledge of them.

28,229. You are not able to say yourself, from your own experience from the working of any of the departments of the Foreign Office, to what extent you think it possible that these departments are over-manned by the higher class of clerks, to what extent the higher class of clerks are doing work which might be fairly done by men who come in upon the lower scale?—Are you referring to the non-political departments?

28,230. I am referring to the non-political departments at the present moment, certainly?—I am scarcely in a position to answer your question. The particular department which is under me, that is, the treaty department, contains only one lower division clerk. With that exception the department contains clerks who are called, for want of a better term, supplementary clerks. I do not think the department is in the least over-manned, and I do not think that in that department they could do with less of the higher class than they have.

28,231. I understand you to be of opinion that in the political departments properly so called, the staff ought to remain in a status much the same as they are?—Yes, I think so.

28,232. And that you think that selected names, and then competition supplies a satisfactory means for recruiting the department?—Yes, I think so.

28,233. You support Sir Philip Currie's evidence and views upon that point?—Yes.

28,234. I do not know that I need trouble you about the clerical establishment any more. In your department the consulate service in China, Japan, and Siam are included?—Yes.

28,235. As questions have arisen with reference to the consular service generally, we should be glad to know what your experience of that consular service is. It has been reported upon, more than once, as being a well organised establishment, and very efficient. Is that your opinion now?—Yes; I should have said so. Of course I speak with some diffidence, because I am a very new under secretary. I was only appointed in April last year, and therefore I have only a year's experience of the China consular service. Before that time it was not immediately under me, though as private secretary I heard a good deal about it. I should say it is a very efficient service.

28,236. I believe you have acted as private secretary to more than one Secretary of State?—Yes.

28,237. And, as private secretary, you have had a very good means of knowing something of all the departments of the Foreign Office?—Yes.

28,238. With reference to the China consular service you have every reason to be satisfied, as I understand?—Yes. I should say that there is every reason to be satisfied with it.

28,239. We have it in evidence already, but perhaps you will say how appointments are made to it. They are made by open competition, are they not?—Open competition for young men, I think, between 18 and 24. The men are then sent out to China, to Pekin, to Tokio, and to Bankok to study. They receive 200*l.* a year. At the end of the year they pass an examination. In Japan a certain additional sum, I think, is awarded if they pass their examination satisfactorily. In China there is a prize on the first examination.

28,240. At all events, open competition is the general principle?—Yes. There is another examination at the end of the second year, and that regulates their seniority for purposes of promotion to assistants as soon as any assistantships become vacant.

28,241. Then they remain within that service?—Yes.

28,242. And they have no future outside the consular service of China, Japan, and Siam?—No. Of course it would be possible for the Secretary of State to transfer them to some other consulate, but as a matter of fact they do remain there. Their experience is valuable, and one would not think of transferring them as a rule.

28,243. The consular service generally in the Levant, I believe, has been remodelled on a somewhat similar basis, has it not?—Yes.

28,244. Recently?—Recently.

28,245. Is that also, in your opinion, a satisfactory service?—I think that the new arrangement introducing that system is a satisfactory one, and that it works satisfactorily.

28,246. I believe it has only been in existence about 10 years, or something of that sort?—Perhaps as long; but not longer, certainly.

28,247. Have you any opinion with reference to the consular service generally. It has been suggested to us, in some quarters, that the services to which we have been alluding, are expensive?—They are undoubtedly expensive; they must cost money.

28,248. Without making any suggestions that the precedent supplied by those services should be applied to other consulates, suggestions have been made to us that consulships generally might be more of a graded service, and that younger men should be introduced with an opportunity of promotion within the profession rather than that it should be left entirely to a perfectly free method of appointing consuls as now exists; have you considered that question at all?—I have considered it; it raises great difficulties in detail, partly on account of expense, and partly on account of the great dissimilarity of the requirements of the different appointments. Those are the real difficulties; theoretically there would certainly be some advantage. The service, no doubt, is not graded, but I ought to say that, as far as my experience as private secretary goes, when any vacancy occurs, the Secretary of State has always wished, first of all, before making any choice of a person to fill it, to know what claims there are on the part of officers already in the service for promotion to it, or for transfer, if it is an advantageous transfer. He has always wished to know that, and it was always my duty as private secretary to consult the Under Secretary of State and the head of the consular department, and perhaps the head of the commercial department also, as to what consuls there were who were eligible, and a very large number of consulates of the better class, the more advantageous class, are filled up in that way by transfer.

28,249. (*Mr. Lawson.*) There is no rule in the matter, is there?—There is no rule; it is entirely at the option of the Secretary of State, but still it is done.

28,250. (*Chairman.*) Suggestions on the subject have been made, and I understand, in theory at all events, favourably entertained by some of the authorities at the Foreign Office; do you or do you not think it would be a good plan to introduce some such system if it be possible, or at least to consider how it could be introduced?—It would be very desirable to consider, but it is excessively difficult in practice, it seems to me, because the expense would be very large if you apply it to the consular service generally, and the difficulty of arranging a system of promotion would be very great. You have a small body of student interpreters in China, and they are all appointed to Chinese consulates, and for that purpose they require to know Chinese and to be in the habit of dealing with the local authorities in China. But the man who would do very well for a consulate at Dantzic would not at all do for a consulate at Erzeroum, or (as Erzeroum is in Asia), say, for a consulate at Carthagena. Equally for South America, a different class of man is required. Therefore there might be a great deal of difficulty, it seems to me, in arranging any organised system of promotion.

28,251. At the present moment there are certain consulates which are regarded as the prizes of the profession, I suppose?—Certainly.

28,252. So far as possible, is it the practice of the Secretary of State to promote men within the service?—Yes.

28,253. But with reference to the method of entry into it, it is entirely open to the Secretary of State, is it not, to appoint anybody whom he pleases?—Yes.

28,254. Subject to a limit of age; is there any limit of age?—Fifty years of age.

28,255. That is a very liberal limit?—It is a liberal limit.

28,256. Do you consider that there might be an improvement effected in the method of appointing consuls and might not such an absolute power to the Secretary of State be in some way or other limited or altered with great satisfaction to himself and to the consular service generally?—I do not think the Secretary of State would object. If the Treasury would consent to the expense—for I think that there would be expense—it would be possible, I suppose, to take another set of consulates and arrange for them a system similar to the China and Levant service, but I think you would still have to leave consulates outside that.

28,257. Leave some consulates outside it?—Yes; for instance, such as the consulate at Samoa. If you get a very large body of men to promote, well then it would do. You might find in it people qualified for all kinds of ports, although there would be difficulties and occasionally grievances, heart-burnings I suppose. But then it requires such a large body of vice-consuls in starting. There is also this difficulty about the position of vice-consuls, that a vice-consul is not considered by the local authorities to be of the same weight or standing as a consul, even an unpaid consul.

28,258. The scheme would involve the addition of a large number of paid consuls or vice-consuls, would it not?—Yes, paid vice-consuls or paid consular assistants, and that would be expensive.

28,259. Have you any reason to think that you could show arguments to the Treasury which would induce them to think that the change would be worth the money?—I doubt it.

28,260. I mean from the point of view of the Foreign Office and the point of view of the efficiency of the service which we desire to get from our consuls and from the obvious advantages which might attach to the system; do you think that the present condition of affairs as regards our service of consuls is such as would justify a large expenditure for such a change?—That is a rather difficult question to answer. I think the consular service as a rule now is a fairly efficient service, and I doubt whether merely for the sake of theoretical perfection we could show grounds for a very large expense.

28,261. Probably you would hold the view that it would not be much use making a representation to the Treasury?—Unless you have a very strong case to show I do not think you are quite justified in saying: "This would be a theoretical improvement, and we are "asking you to spend so many thousand pounds upon "it." One must show an urgent, or at all events, a very real necessity for it.

28,262. We come then of course to this point; apart from any theory and keeping to practice do you think that the country is efficiently served by the present arrangements as to consuls?—Yes, I think so, subject to the imperfections which attend all services. It occurred to me that possibly a rule might be laid down, in practice I think the rule does exist, that vice-consuls

Sir T. H. Sanderson, K.C.M.G., C.B.

13 Feb. 1890.

who enter the service will in time receive promotion if they do well. The vice-consuls who serve in consulates general, for instance, might be admitted by limited competition with prospects of promotion. But I doubt its being desirable to limit the power of the Secretary of State to make first appointments to consulates where special qualifications are required. He has that power in regard to the heads of diplomatic missions, and I doubt whether it would be desirable to limit it in cases of consulates.

28,263. Do you think that that discretion as to special appointments should be wider in the consular service than it is at present in the diplomatic service?—No, I do not think that it need be, but the difference is this: that whereas there are only a few heads of missions and there is a large staff under them, there is a great number of consuls and a very small permanent staff under them, there are very few vice-consuls serving directly under consuls. So that although in form the limit would be the same, in practice it is a large one in the one case and a small one in the other.

28,264. I do not quite understand about promotion of the consuls within the service. The evidence we have had already rather points to this, that the whole service is more or less on a level, and that has been one of the reasons why it has been suggested that a service more graded would give greater encouragement to men entering it. I am not saying that as my opinion or as the opinion of the Commission, but that is a point which has been put before us?—What I meant was that those vice-consuls who are appointed to serve under consuls, or under consuls-general—there is not a large number, but there is a certain number—should have the prospect of promotion given them. Practically they have it now I conceive, but I think that it should be assured to them.

28,265. (*Mr. Harvey.*) By a system of grading the service?—They are graded, they are vice-consuls.

28,266. How do you propose to assure it to them?—Simply by regulations to the effect that at the end of a certain time they would have to undergo certain examinations and that they would then be eligible for consulates whenever an opportunity occurred; you cannot bind the Secretary of State much more than that.

28,267. (*Chairman.*) Leaving that point, and understanding from you that you are in favour of maintaining the present system of limited appointments to the Foreign Office and to the diplomatic service, I should like to ask you what your views are about fusing more completely—as far as possible in fact—the Foreign Office and the diplomatic service?—I should be all in favour of there being every facility for the Secretary of State transferring from the diplomatic service to the Foreign Office any man who seemed to possess the qualifications for Foreign Office service and equally for transferring to the diplomatic service any member of the Foreign Office who possessed the qualifications for the diplomatic service. The qualities are different. There is another difficulty which is, that men who can very well afford to live in London at their homes and work in the Foreign Office cannot always afford to serve in the diplomatic service. Therefore it might be an absolute hardship at times to transfer a man from the Foreign Office to the diplomatic service, and the public service would not benefit by too sweeping a system of transferring men from the diplomatic service to the duties are Foreign Office because the work is different and the dissimilar.

28,268. It has been always kept in view, has it not, by the Foreign Office as well as recommended by former committees of inquiry, that the interchange of duties between the members of these different services should be as far as possible encouraged?—Yes, and I think that is undoubtedly an advantage.

28,269. In more than one of the great European States it is the case, is it not, that they are absolutely identical?—Yes.

28,270. Do you know how they get over the difficulties of expense, and so on, which you have mentioned?—No. In France, for instance, the staff of the Foreign Office is very large. I think it consists of about 202 or 212 men. They have, I fancy, what they call *attachés au Ministère des Affaires Etrangères*. Those are men who serve at the Foreign Office a certain time, and then go abroad. I conceive that the Foreign Office as well as the diplomatic service is considered in France a *carrière de luxe*.

28,271. Do you mean that when they go abroad they have extra allowances?—No; I think they are men who can afford to go abroad, and that a portion of the staff of the Foreign Office is manned by these men. There is a large number of them.

28,272. (*Mr. Lawson.*) You mean the *attachés payés* and the *attachés autorisés*?—Yes, they have a very large staff. When I spoke to one of their men here about the size of our office, he said, "Oh, what a small staff."

28,273. (*Chairman.*) Looking at the class of men who come in, of whom you have had now considerable experience at the Foreign Office, and comparing them with the young men who come into the diplomatic service, would you be able to say that there is at first much difference in their abilities or work?—I should not think there is a great difference. There is a great competition for the Foreign Office, and a larger number of men consequently are nominated to compete. There are generally nine, sometimes even more competitors for a Foreign Office nomination, whereas you have only five or six perhaps for an attachéship. In consequence the examination becomes harder. I should not say there was any great difference in them, only as men go on you will find that some of them develop in one direction and some in another. Two or three men who have come into the Foreign Office have shown themselves extremely able, but better adapted for the diplomatic service, and have actually been transferred to the diplomatic service. I have known other cases of men who are in the diplomatic service, and who, for personal reasons, wished to belong to the Foreign Office, and were admirably adapted to be Foreign Office clerks, and who have been so transferred.

28,274. Do you think that the expense of going abroad is a reason which really ought to prevail, and that the present state of things, namely, that the two services must be separated in the beginning, should therefore be continued?—I think so.

28,275. As I understand, the gist of what you have been saying to us is this, that you think the fact of *attachés* being called upon in a great capital to have rather more income than naturally can be expected from an official salary, really makes a great difficulty in a complete fusion of the Foreign Office and the diplomatic service?—I think it does.

28,276. (*Mr. Lawson.*) Might it not be managed as in other countries, by a process of natural selection in the way you indicated with regard to France?—If you made it a rule that no one should come into the Foreign Office who had not 400*l.* or 500*l.* a year of his own.

28,277. But there is no rule of that sort in France, is there?—I do not know; but unless that is the practice I do not know how they get on—I suppose they do not enter the service unless they have the necessary means. There is no actual regulation in England, but this is practically what the Secretary of State always does before he makes any nomination to the diplomatic service. He makes it known that it is not worth anybody's while—that they are sure to starve, in fact, if they have not got 300*l.* or 400*l.* a year of their own. That is always written to the applicants; when they write to ask for a nomination they are always warned that a private income is necessary.

28,278. (*Mr. Harvey.*) What figure is quoted in the paper, 400*l.* a year?—I said 400*l.*; I do not know whether there is any paper, but that was the sum that we as private secretaries were directed to mention. Of course there are some places where more would be necessary; at St. Petersburg, for instance, you ought to be able to make up 600*l.* or 700*l.* of your own private income.

28,279. (*Chairman.*) With reference to any further amalgamation of the consular and diplomatic services, you would probably give the same answer that has generally been given, that whatever may be the theoretical reasons it is very difficult to see how the thing can be carried out?—Yes. I see nothing to be done, except that there are certain consular posts to which it might be recognised that the Secretary of State might, whenever he thought desirable, appoint a diplomatic officer. That would, I suppose, occasion some unpleasant feeling in the consular service, but on the other hand it might also be said that there were certain posts to which consular officers might be promoted, as in fact they are, but I do not see any more positive way of asserting that.

28,280. (*Lord Lingen.*) I should like to ask you for your own opinion upon these points, and I will not trouble you to go into the details of them; you have

got three classes of clerks in the Foreign Office, what we should call the upper division, those that are in the diplomatic or purely political division, the supplementary clerks, who in five classes go up from 100*l.* to 1,000*l.*, and you have also got a certain number of lower division clerks. Now, as between the supplementary clerks and the lower division clerks, have you any opinion whether, as vacancies fall in the supplementary class, lower division clerks might be substituted for them?—I have no personal knowledge of the lower division clerks, and I can only speak from what I have heard in consultation on the matter. I should say that it is a point on which it would be advantageous that the Secretary of State should have a power of promoting, but I could not answer for it that there would be lower division clerks who were fitted to fill up some of those positions.

28,281. Supposing that the posts of librarian and sub-librarian in the librarian's department and of superintendent and assistant superintendent in the treaty department, those are appointments that go up from 550*l.* to 1,000*l.*, were kept as staff appointments; then do you think that the clerks who are under them might all be of the lower division and so get rid of the supplementary clerks as a class altogether?—In the librarian's department?

28,282. And in the treaty department?—No, I do not think so.

28,283. Then you think the supplementary class is necessary?—I think so.

28,284. What difference should you expect to find in the qualifications between the supplementary class and the lower division class?—Knowledge of languages.

28,285. Is a knowledge of languages required now of the supplementary class?—Yes.

28,286. Of more than French?—Yes, in the library. I do not know whether it is required in the examination for the treaty department, but they ought to know French well, and something more than French in that department; it is necessary.

28,287. Might we assume that every supplementary clerk knows at least one foreign language; everyone?—In the treaty department and in the librarian's department I should think certainly; and probably one language besides French.

28,288. Are supplementary clerks employed in any other department except those two?—I think there are supplementary clerks in the financial department.

28,289. Possibly in the financial department some of them do not know French?—Only French translation is required. A greater knowledge would not be necessary, I suppose, to the same extent at all events.

28,290. Supposing under the new state of things which is shadowed out in the Treasury Minutes that a lower division clerk, if he is a deserving person, may see his way clearly up to 350*l.*, would you not consider then that that was a class which, in the librarian's, the treaty, and the chief clerk's departments might serve for subordinates?—I do not think that the salary to which a man attains points particularly to his qualifications. I think that there might be men among the lower division clerks who would be fit, but I should not like to limit it to that.

28,291. I will put the question in this way. You would not see a fatal objection to filling vacancies, at any rate to a certain extent, and experimentally, in the supplementary class by the appointment of lower division clerks?—If they were reported by the head of the department to be fitted for it, I should be glad to see the vacancies filled in that way.

28,292. The result would be that they would come in by open competition?—Yes.

28,293. Do the present supplementary clerks come in by competition, or by a pass examination?—They come in by competition in the librarian's department.

28,294. (*Chairman.*) Limited competition?—Yes.

28,295. (*Lord Lingen.*) Is it limited competition for the supplementary clerks?—For the library the examination and conditions are precisely the same as for the establishment, but you do not get the same number of competitors, and consequently it is not so severe an examination.

28,296. That being the case in the librarian's department, is it also the case in the treaty department?—No; in the treaty department it is, I think, a pass examination.

28,297. Is the same the case in the chief clerk's department?—In the chief clerk's department I think it is a pass examination. I am not quite certain. It may have been altered.

28,298. There is no department of the Government in which in these subordinate departments there is so great a variety as in the Foreign Office. The fact that you have these supplementary clerks and lower division clerks constituting two completely separate services, is almost peculiar to the Foreign Office?—In the library practically, except that there is a difference of pay, and they are not transferable to other departments, they have the same examination and same conditions of entry as the establishment.

28,299. They do not get the same salaries?—They do not get the same salaries; they get less. That is a matter of economy.

28,300. You would not be prepared, I understand, now to say either pro or con how far it might be possible or advisable to introduce a greater number of lower division clerks in the place of supplementary clerks?—What I should have thought the desirable thing to do would be that there should be a prospect open to the lower division clerks now employed in the Foreign Office, if they were considered by their superiors eligible, of being promoted to the supplementary clerkships.

28,301. Admitting that, look at the overlapping of the salaries. The lowest division of the supplementary class goes up from 100*l.* to 240*l.*; then there is a class from 250*l.* to 360*l.*; then there is a class from 400*l.* to 500*l.*; another from 500*l.* to 650*l.*, and another from 700*l.* to 1,000*l.* Now the lower part of that class practically get the equivalent salaries, or something like it, to those of the lower division; it is only when you come to the highest classes that it would be much promotion to the lower division clerk on the new system to put him into the supplementary class?—But then it would destroy the promotion of the class he was passed into.

28,302. However, I may take it that that is a point upon which, excepting so far as the supplementary class gives a chance of promotion to the lower division, you do not see any absolute *primâ facie* objection to entertain the question?—Not to their promotion. I should be very sorry to think that the whole of the library was to be inevitably manned with lower division clerks without some means of ascertaining their fitness.

28,303. Proposing to retain both the librarian and sub-librarian in any case?—Yes, I still should not like to think that the other men were necessarily all to be lower division clerks without some particular test as to their fitness.

28,304. Then there are three departments, the chief clerk's, the librarian's, and the treaty departments which are worked now quite separately, and as far as I understood from previous witnesses, with little or no interchange of clerks from one into another; partly I suppose that is from the great variety in the classes of clerks that we have?—It is principally in consequence of the great difference in their duties. In the chief clerk's department the majority of the staff is employed in the examination of accounts; almost entirely so employed I should say. The library staff is employed in preparing memoranda, and registering correspondence. It is very important that the memoranda should be properly prepared, and that the correspondence should be easily available. The staff of the treaty department is employed in the preparation and examination of treaties, and the copying of them, and in dealing with the technical questions which belong to that department.

28,305. I was aware that their duties were extremely different; but the point that I wished to put forward was this: while men were in the junior classes would it not be desirable, I do not say for the convenience of the heads of those departments, but for the service generally that the men should be passed through those separate departments and get more or less a knowledge of all of them?—I do not think that the public business would profit by that.

28,306. You do not think so even in the junior stages?—No.

28,307. If a vacancy occurs, for instance, in the treaty department, you must bring a new man in from the outside instead of transferring him from one of those other departments which conceivably for the time

Sir T. H. Sanderson, K.C.M.G., C.B.

13 Feb. 1890.

might be over officered?—I would not prevent a transfer. As a matter of fact, the practice does exist at this time. The second in the treaty department was transferred from the chief clerk's department.

28,308. Then there is to a certain extent an interchange now among those departments?—There may be.

28,309. Supposing a man were taken in the junior stage, it could not be more inconvenient to take a man so far as the department which he enters goes, from another department in the Foreign Office than it is to take him from the outside. Do not you think that there would be a considerable advantage to the office if each clerk had passed a year or two at least at some time of his career in each of those departments so as to know what went on in it?—I think, as regards the treaty department and the librarian's department, that might be so.

28,310. (*Mr. Lawson.*) Would you say so of the commercial department too?—Yes, I think perhaps the commercial department too, as far as regards the lower grades. In the chief clerk's department you get men for the purpose of doing accounts, and I think I would almost rather have a man who had passed a proper examination from the outside come into the librarian's department than have a man who had been merely brought into the office for the purpose of studying accounts and who had never done anything else; he might do, but it is a question of the appointment of such a man being obligatory. Of course you might find a man who was admirably adapted for the work and transfer him.

28,311. (*Lord Lingen.*) Subject to the objections you have stated, there is occasionally as a matter of fact now an interchange of clerks among those departments?—Yes.

28,312. Or may be?—Yes.

28,313. Now to go to another point, did I rightly understand from you that there are any unpaid consuls now?—A large number of unpaid consular officers, mostly vice-consuls.

28,314. Are they allowed to trade?—They are allowed to trade.

28,315. Still?—Yes.

28,316. Then as to the grading, is not it practically graded in this sort of way: I have just taken down a few of the cases from Class No. 5, but I have not had time to go over them quite at length. I find a great number of consulships and vice-consulships from 100*l.* to 500*l.*, a somewhat less number from 500*l.* to 700*l.*, a very considerable number from 700*l.* to 1,000*l.*, and one or two over 1,000*l.* Now, if a man distinguishes himself in the lowest class so as to bring himself under the notice of the Foreign Office, would he have a good chance of being transferred to one of the more valuable consulships or would be kept in the consulship where he was to the end of his days?—It would depend so very much; a consul will sometimes prefer to be in a consulate in Italy with 500*l.* a year to being in a consulate in Porto Rico with 800*l.*

28,317. Suppose he wished to go to Porto Rico?—Then I do not know why he should not—practically that is what happens. The difficulty of classing them is that so many of the salaries are arranged according to the expenses, and the grading according to the salaries would be fallacious.

28,318. But the man who was at the 500*l.* a year place, if he was graded according to salaries, although 500*l.* is presumably all that the consular duties are worth at that point, on a graded scale he would go up to 1,000*l.* if he stopped long enough there?—Do you mean that he would be promoted in the same place?

28,319. What I asked was this: You say the man who has got 500*l.* a year at an agreeable and healthy station may prefer that to a place which is less agreeable and less healthy although the salary is 1,000*l.* a year?—Yes.

28,320. Supposing that this was a graded service, then without moving from his 500*l.* a year place, if I understand what is meant by a graded service, he would rise in salary irrespective of where he was; is that what you understand by a graded service?—I understood it in the way in which the diplomatic service is graded;—into embassies, and missions of the first and the second class, and so on.

28,321. Just so, it is graded *ipso facto* by the value of the different posts?—Yes, that is so.

28,322. That is what I wanted to come to; the consular service in exactly the same way is graded by the value of the different posts?—But what is the standard by which they are to be valued? It cannot be the mere amount of salary. The man who resides in San Francisco receives, I forget what it is, say 800*l.* a year.

28,323. (*Mr. Lawson.*) More, I think?—Say 1,200*l.* a year. I have been assured that that is not enough to live upon there without private means. Of course that is an extreme case.

28,324. (*Lord Lingen.*) I have not gone into the second column of allowances, but leaving these exceptional places out of account, I suppose it is not simply the cost of living which determines the salary of a consulate; it also is the importance of his post, at any rate to some extent; is that so?—That is so.

28,325. Then would the man who has distinguished himself at 500*l.* a year and who has not expressed this rather unusual preference for the 500*l.* to 800*l.* somewhere else have a chance, if he was a distinguished man, of being shifted by the Secretary of State?—Yes.

28,326. Not only a chance, but a probability?—A probability.

28,327. (*Lord Basing.*) As I understand, the junior diplomatic service is distinctly graded?—Yes.

28,328. And the young men entering have a certain promotion assured to them irrespective of their appointment to this or that or the other place?—Yes.

28,329. And that it is only when they come to have standing that they have to rely upon chance vacancies for further promotion?—Yes, that is so.

28,330. That is on the analogy, we will say, of the naval and other services?—Yes.

28,331. To go back for a moment to the question of grading the consular service, what I understand is this, that a man does not because he has got a consular service by time or by seniority or by standing, rise to a higher salary; that is the present state of things, is not it?—He would not in that same appointment.

28,332. Then it would imply a great change so to grade the consular service, that every man in it was entitled by standing and seniority and length of service to go forward by increments like a clerk in a Government department?—A great change.

28,333. An immense change?—Yes.

28,334. Are you satisfied, as far as your judgment and experience go, with the employment of consular agents without pay, putting aside the question of cost?—The question of cost seems to me an essential element. Of course in most cases it would be better if you could afford to have everywhere paid consuls, but it is the compromise to which one reconciles one's self.

28,335. In this service in the United States do you know what proportion of the appointments is paid and what proportion is unpaid?—I am afraid I could not express an opinion upon that offhand On reference the numbers are 15 paid to 22 unpaid.

28,336–8. The question of grading the service, and giving anything like a classification and the right to promotion and improvement very much mixes itself up with the practice of the department in employing unpaid service, does not it?—I do not see why the fact of there being an unpaid service should interfere with the other part of it.

28,339. Why?—Except in this respect; if you had a large number of paid vice-consuls you would probably wish to employ them in places where now we have unpaid consuls; it would probably be the only way.

28,340. It does not follow because you have an unpaid consul in a particular spot that you would, as time goes on, replace him by a paid consul even now?—No.

28,341. And *vice versâ*?—Yes.

28,342. Therefore, the practice of employing unpaid officers in this service, which is so widely spread all over the world, is very much mixed up with the feasibility of a graded service. It would be an enormous change to convert all your consular agents into paid servants?—Certainly.

28,343. And an almost inconceivable thing for any Government to propose?—Yes.

28,344. Therefore, as long as you have an unpaid service prevailing to so great an extent the difficulty

would be enormous of grading the consular service on anything like a principle which can be compared with that which prevails in a public department, say in this country?—The expense would be great.

28,345. Do you get fair service do you consider from these unpaid gentlemen?—I should think so on the whole. It is not always satisfactory, but generally speaking it is so.

28,346. Is it a common thing, if you find that the country is not served by unpaid service, to withdraw the appointments?—That would be resorted to in strong cases.

28,347. Is it as a matter of practice ever done?—Yes, it has been done.

28,348. Whether by appointing another unpaid man or by sending a paid officer?—Yes, one or the other.

28,349. (*Mr. Lawson.*) I am afraid your answers to Lord Lingen might be taken as rather misleading, because they conflict somewhat with the evidence of Sir Percy Anderson, who told us that in the consular service there is no ladder, and that the whole service is more or less on a level?—I can only say that promotion or transfer from one consulate to another is not an increase in rank, it is on a level in that respect; and that the relative salaries do not afford any reliable criterion as to the relative advantages of posts.

28,350. As a matter of fact there is no real grading of the service whatever; and as a matter of practice, I think consuls are not transferred from one place to another?—Pardon me, they are.

28,351. That is not the inference I should have drawn from the evidence we have had before?—If you will allow me I will read you out any one case taken at haphazard from the Foreign Office List. Henry Grant was appointed consul at Brindisi, transferred to Naples, and then transferred to Warsaw, that is three transfers. That is not a great number of transfers, but still that gentleman has been transferred and a number of gentlemen in the same way have been transferred.

28,352. (*Lord Lingen.*) I presume one consul does not spend all his life at one place?—Some consuls do.

28,353. (*Mr. Lawson.*) Would you go so far as to say it is the common practice to transfer consuls from one place to another?—I do not know that it is the common practice.

28,354. I know it has been done?—I should say it is a practice.

28,355. In many of those cases men are taken in, and of course sent to special places without any sort of examination, and with a very wide difference in regard to age?—Not often without an examination, only occasionally.

28,356. Do you believe that for the work they have to do we get by that system a good class of men?—Yes, I think so.

28,357. It is said sometimes that the failures of society are occasionally sent off in this way?—I do not think that there are many.

28,358. I mean men against whose character there is nothing whatever, but who have not succeeded in other branches of life?—I do not think that there are many.

28,359. But I presume that there have been some?—There may have been occasions.

28,360. Without respect to that, do you not think that it is a bad system that men should be appointed at an advanced age to a new kind of work?—If it is a new kind of work, and if they have not had anything of the kind before, it would be, but there are a great many posts to which it would not be desirable to send very young men.

28,361. You would not, of course, say that men should be sent over middle age?—No, I think not; it would be better to have rather younger men.

28,362. Do not you think, as in the case of countries like France and Italy, where there is a great number of paid posts, it would be possible to offer more inducement to zealous work by having some better system of promotion than now exists?—The difficulty is to think what kind of promotion it would be.

28,363. From the worse circumstanced to the better places—I do not use the word "paid" for reasons which you will understand?—My impression is that among the well-paid consuls in France almost all have been transferred from other posts; certainly, a great many.

28,364. Would the same remark hold good of the group of countries which you would include in the geographical expression of "Central Europe"?—To a considerable extent.

28,365. I can understand the difficulties of transferring a man from France to South America. Of course I do not know, but I should not say there was the same objection to transferring him from one part of Western Europe to another?—No. There have been a considerable number of such transfers, though I could not say positively that it was the general practice.

28,366. Now to turn to another point. May I ask you whether you believe that any disadvantage results from the separation of China and Japan in regard to its consular service from other parts of the world?—No, I think none; the service is so very distinct.

28,367. It is under you, of course?—Yes.

28,368. And the rest of the consuls are under Sir Percy Anderson's department?—You mean that the China and Japan service is not under the consular department.

28,369. Yes?—I do not think that any disadvantage results from that. When first that service was instituted the duties were even more political than now; but they still remain to a considerable extent political.

28,370. But they are hardly more political, I suppose, than the Turkish and Levantine consuls?—No, not much more.

28,371. Do you believe then that the present separation of work does not cause any confusion?—I do not think it causes any confusion.

28,372. In respect to the commercial reports do you issue the same instructions that are issued from the consular department to the consuls generally?—I think so. They send us commercial reports regularly, which are revised and published in the same way.

28,373. Revised by you, or revised in the commercial department?—I see them—by me.

28,374. I mean are they sent to the commercial department of the Foreign Office?—The Chinese department prepares them for publication, but the commercial department sees them and takes the final steps.

28,375. Is it done on the same system as in the commercial department?—Yes.

28,376. In the case of information for the statistical department of the Board of Trade, is that forwarded by you direct to them?—That would be forwarded by us direct to them; we should let the commercial department see it; it is a mere administrative detail. The letter would be written, but the paper would also go to the commercial department. Everything that comes in from China which refers in any kind of way to commerce is instantly communicated to the commercial department.

28,377. Do you think that there is sufficient cause now for keeping the China and Japan services separate from the other services?—Do you mean the receipt of despatches at the Foreign Office?

28,378. Yes?—I think there are reasons. They might of course have a consular series and another series, a political series; but that would be dividing their despatches into two series.

28,379. Is that done in the case of the Turkish consuls?—Yes.

28,380. If it is done in their case it might be done in the other?—It might be done, but I do not know that there would be any great advantage in it.

28,381. To turn to another subject; there is a paper handed in by Sir Philip Currie with regard to the conditions of admission to the French, German, Austrian, Italian, and other foreign offices and diplomatic services. So far as appears in that memorandum, in Italy alone is there any definite rule laid down requiring a property qualification; are you aware of that?—No; I have not seen that return.

28,382. It is hardly a return; it is a statement?—I should explain that there is no property qualification required here except in this way, that a warning is addressed to the parents that unless their son has private means he will be unable to get on.

Sir T. H. Sanderson, K.C.M.G., C.B.

13 Feb. 1890.

28,383. Might we suppose if you get a system of limited competition for the Foreign Office and the diplomatic service, a warning would probably serve the purpose that is required, supposing the services were amalgamated?—Yes. I should think so, except that what would happen would very likely be this, many people would send their sons in without the full amount of means, in the hopes that they would be kept at the Foreign Office or only sent to one or two comparatively cheap posts.

28,384. But where so much is known of individual men, as in a small office like yours, would any practical difficulty arise in working that out?—You might have a glut of men with small means.

28,385. (*Lord Lingen.*) Before this subject of the consuls is given up I should like to call your attention to this: I have gone roughly over the consulates in Class 5. I daresay these figures are not exact, but I am sure they are not very far wrong. Of consulates from 100*l.* a year up to 500*l.* there are 109; between 500*l.* and 700*l.* there are 38; between 700*l.* and 1,000*l.* there are 43; and over 1,000*l.* there are 11. I only want to be sure of your answer. I understood from you that if a consul greatly distinguished himself in one of those lower posts he would certainly come under the notice of the Secretary of State for transfer to a higher post unless the man himself objected to be transferred. I only want to have that quite clearly down that a man is not necessarily kept in one of those lower posts for the whole of his life?—I should certainly think that under those circumstances he must come under the notice of the Secretary of State.

28,386. (*Mr. Lawson.*) Supposing that that estimate includes the Turkey service, is it the case that anybody would be promoted from the Turkish service to any other, or from any other part of the service to the Turkish service?—There is no absolute bar.

28,387. Is it done in practice?—At this instant I should say that it was certainly open to the Secretary of State to do it.

28,388. The Turkish service is open competition of course?—Yes, but although the consulates are open to them as their prospect of promotion, and although it would be an injustice to those young men that any large number of those consulates should be appointed to from the other part of the service, still there is no bar to the Secretary of State's doing so.

28,389. Of course the Turkish service is a very expensive one and takes a good deal of money?—Yes. For an instance of which I said a moment ago, Mr. Abbott, who was Consul-General at Tabreez, was lately transferred to some post—in South America I think—but certainly to some post outside the Turkish and Persian service.

28,390. (*Mr. Harvey.*) With reference to your answer to Lord Lingen just now, during the time that you were private secretary to the Secretary of State for Foreign Affairs, when the question of the appointment to a valuable consulship was under discussion did you know of any instance of the claims of certain very meritorious vice-consuls or consuls in a less highly paid position being brought before the Secretary of State?—I think they always were.

28,391. Is there a system then by which the claims of the meritorious men are always brought before the Secretary of State whenever there is a vacancy in the higher paid posts?—Yes, there is a system; that is to say, the Secretary of State in all probability asks the question himself.

28,392. Of his private secretary?—Of his private secretary and very likely of the under secretaries.

28,393. And would the private secretary then consult the head of the consular department?—Yes.

28,394. Would it be his business?—It would be his business.

28,395. To find out the meritorious men who are occupying places, not so highly paid?—Yes, and the deserving men who are in unhealthy posts or disadvantageous posts.

28,396. I see that Mr. Kennedy expressed his opinion in favour of a modification of the present system in the direction of the service being more graded, and he also expressed the opinion that the posts might be classified and grouped in certain divisions. Would you from your experience agree with that?—I think it would be an advantage if you could obtain a proper standard for grouping them.

28,397. You have of course watched the effect of the system of open competition in the Levant and China services?—Yes.

28,398. Are you quite satisfied with that?—Yes. The only difficulty has been in the Levant service to get a sufficiently rapid promotion. We have been obliged to stop the appointment of student interpreters for the moment.

28,399. Therefore, so far as your experience there is concerned, you have nothing whatever to say against open competition, but you are rather in its favour?—Rather in its favour.

28,400. Having regard to the class of men?—Yes.

28,401. Would you say that taking the Levant and China men on the average they were a better class of men than those who entered the consular service generally; do you think you have got more marked ability in the Levant and China services?—I should say so, but I find it difficult to make a comparison as regards the Levant, for there has scarcely been time for the experiment to be tried. There are only 13 students and assistants, I think, and a few have been promoted. I do not think there have been more than 15 or 16 assistants and students altogether; some of them, I believe, are very good, and the general average is high.

28,402. (*Mr. Lawson.*) As you said that promotion was so slow in the Turkish service I suppose you would not promote men from other parts of the service and stop it still further; you would not care to recommend such a thing?—Not unless there was either an absence of a man particularly qualified for that post or some man did possess very peculiar qualifications for it.

28,403. Such as linguistic acquirements, of course, and all that sort of thing?—There are places where men of great judgment and considerable authority are required.

28,404. (*Mr. Harvey.*) As the regulation stands, I believe there is nothing to prevent the Secretary of State from appointing a young man of 25 to the most highly-paid consulate on the list?—I think it is over 25.

28,405. Well, over 25?—No, there is nothing to prevent that any more than there is to prevent the Prime Minister from appointing a curate a bishop. The Secretary of State might do it; that is to say, he might submit his name to the Queen.

28,406. (*Chairman.*) Have you any suggestion that you yourself would make from your experience of the Foreign Office on which you think a word from the Commission might strengthen the hands of the internal reformers?—I do not think I have any suggestion of sufficient weight to trouble the Commission with.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

EIGHTY-THIRD DAY.

7, Whitehall Place, Westminster, S.W., Friday, February 14th, 1890.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Earl BROWNLOW.	Mr. J. CLEGHORN.
Lord LINGEN, K.C.B.	Mr. A. S. HARVEY.
Rt. Hon. H. H. FOWLER, M.P.	Mr. H. L. W. LAWSON, M.P.

Mr. H. WALPOLE, C.B., *Secretary.*

Mr. EDWARD FITZGERALD LAW called and examined.

Mr. E. F. Law.

14 Feb. 1890.

28,407. (*Chairman.*) Will you please state what is your position?—I was appointed commercial attaché for Russia, Persia, and the Asiatic Provinces of Turkey to reside in St. Petersburg.

28,408. That was a new appointment, was it not, within quite recent years?—It was.

28,409. How long ago?—About two years and a half ago.

28,410. What are your particular duties?—My duties are to collect information generally in these countries, which necessitates my travelling and visiting different centres of industry and ports, and to attend to such particular commercial questions as are specially brought before the embassies where I am attached.

28,411. You move about, I understand, according to where you have any intimation that you may discover anything that may be useful to British commerce?—I move about in accordance with instructions from the Foreign Office, but I have made suggestions frequently which, as a rule, have been accepted.

28,412. Then you have not got exactly a roving commission to go where you think you would be most useful?—No. I have been fixed as having my headquarters at St. Petersburg. I have, however, been more than half of the time away from St. Petersburg. I have visited the ports and centres of trade, and seen our consuls, and I consider it is an important part of my business to collect and collate their information—that is, in Russia and in Turkey. In Persia, I have only been once, and the circumstances there are different. What I have done has been making what I might call a tour of observation in that country, so as to form general ideas, because I do not think that before I went there anybody had made a distinct special study of what was going on, and how foreign nations were competing with us and in what articles, and so on. Then I report on what information I obtain.

28,413. How often do you send reports?—When I think I have got information upon a subject sufficiently conclusive to my mind to justify me in putting it into writing. When I am at the embassy I have a great many questions to deal with besides the more general reports and statistics, there are what you might call more detailed questions. Continually things are cropping up in which British subjects request the protection of the ambassador in commercial matters; ordinary commercial matters are generally treated locally by a consul (where a difficulty arises between a British subject and local authorities), but often either from the absence of proper consular representation, or from the fact of the local national authorities being unable themselves to settle questions, they come on to the embassy, and when I am there I undertake them. Sometimes they are very trivial; sometimes they are very important. For instance, a man writes that he has had a lot of silver jewellery confiscated because the Russian authorities said it was not up to the standard that it was stated to be, and which they demand that it shall be. Of course, to him it is an important matter to recover 40*l.* or 50*l.* worth of silver stuff, and that is a class of matter, which though not of general importance, when I am at an embassy, I have to deal with, and to get the authorities to look at in what we consider the proper light, and help this man to get back his jewellery.

28,414. From your experience of the office that you hold, and confining yourself first to that particular office, have you any suggestions to make to the Commission that you think would extend its utility?—I do not think it is possible for me to do all that I myself think I ought to do.

28,415. You are speaking now entirely of the district which you serve—Russia, Turkey, and other places in the East?—Yes.

28,416. Do you think you might have a colleague in the work?—It is a very difficult question how this class of work will be best provided for, but I simply state that it is impossible for me to get all the information for which I am continually asked, and as a matter of travelling also, it is equally impossible for me to do all that I think I ought to do. In the two and a half years I have travelled as much as I could, but there are immense districts and most important towns which I have never yet been able to get to. I have never been to Smyrna, which is one of the most important trade ports. I have not been to the Levant at all. I have never been able to get there, but I am very anxious to go there. Then I have not been to the Persian Gulf.

28,417. That rather leads me to this question: Whether you have anything to say about the sufficiency or insufficiency of our consular representation in the countries to which you go. As I understand, a part of your duties is to go round and see the consuls?—It has never been specifically laid down as to what my duties are, but it seems to me to fall in naturally with the general idea of my duties that I should see the consuls, and I do see them.

28,418. It would be a convenient way perhaps of taking it, if I asked you from what you have seen of the consuls, whether you have any suggestions to make which might improve the consular service?—About the consular service I have only one idea, and that is: that in so many countries it is absolutely essential that the consul to be of any use should know the language, and not only know the language, but that he should know something of the habits and ways of working of the people, that it appears to me to be a very great misfortune that men are liable to be moved promiscuously from any part of the world to any other.

28,419. Do you think there is too much movement among the consuls?—It is necessary for them to move in order to give promotion. The system in China and Japan, judging from the very little I saw of it, appears to work well, and my own idea would be that it should be developed elsewhere: that is to say, that countries should be grouped together which have some similarity, either close political and commercial connexion, or similarity in the language and manners of the people. I do not pretend to elaborate in detail how many groups there should be, but my idea is that the countries should be grouped in that way, and that a consul should enter upon his career in a particular group, and in that group should take his promotion. Then he would know something about the language as a matter of course, it would be his duty to know it, whereas now a man may be appointed to the south of Russia who does not know a word of Russian, and to my mind such a man is nearly useless when he gets there. The same with any man sent to Turkey if he does not know Turkish.

Mr. E. F. Law.

14 Feb. 1890.

28,420. But there is a special service in the Levant, is there not?—It is hardly developed; so far as I know, it is developing—I think it is working in the right direction. I think a point that should be distinctly understood is that North and South Russia are quite different. In South Russia the Russian language is absolutely necessary, but in North Russia, German will carry through nearly all our consuls.

28,421. Will that always be the case, do you think?—Yes.

28,422. Do you suggest that the consular service of South Russia, Prussia, and Turkey might be grouped?—My own idea is that the Black Sea, the South of Russia, the Caucasus, Persia, and Turkey could be most conveniently and advantageously grouped together. Though it is necessary sometimes to bring in special men for special reasons to special places (and I have seen myself where it was absolutely necessary); still, as a rule, I think that men should take their promotion in a particular group, that they should say: Well, now, I elect to go into that group, and I intend to learn the necessary languages.

28,423. Some of the evidence we have had from the head of the Consular Department of the Foreign Office rather pointed, I think, to this: that there was not a great deal of movement among the consular body?—I do not say that there is. I have never followed it, but there must be movement every time a man is promoted. At present, as far as I know, the particular point as to whether he has had any previous connexion with the country to which he is going, or whether he has not, does not come forward, and it cannot come forward in fairness to the man, because it is his turn for promotion and there is a post going.

28,424. Subject to that consideration, from your observation, are you able to say whether you think that this country is fairly well served by its consular service?—I think, on the whole, exceedingly well served; sometimes remarkably well. With reference to what I was saying of the Black Sea, at this moment, as far as I know, there are only two men who do not speak the language, so it is not a crying evil. At the same time, when I am asked what I think would make the whole service work more smoothly, I think it is such an arrangement as I have suggested. There is a great difficulty in finding men for Persia now. We are likely to want men for Persia. As an instance of the present difficulty, I may mention that a gentleman has just been appointed to Resht who knows only the Persian language. Now, to my mind, Resht is a place where the Russian language is quite as important a language as the Persian, although Resht happens to be in Persia, but there is not, I believe, a man who does know the two languages.

28,425. I suppose you have had an opportunity of seeing some, at all events, of the consular reports which have been sent home?—Yes, and they are often of great value.

28,426. Do you get them after they have been published by the Foreign Office at home, or before?—As they are printed they are all sent to me.

28,427. From your knowledge of what you have seen of the trade of the countries you visit, would you endorse the opinion which we have heard stated generally that these reports are very valuable, and have become much more valuable in recent years?—I cannot say anything about their having become more valuable, because I never looked at them formerly, but I find them very valuable to me in connexion with my work, and the opinions I have heard from the people I have seen, and from Chambers of Commerce, and so on, is the same they find them very valuable. Of course they vary very much, just as one man's capacity varies from another's, but on the whole they are certainly of great utility.

28,428. I presume you have had many communications with Chambers of Commerce at home, and that you have also had communications with their representatives in Russia and the East?—Yes.

28,429. What is the result of those communications; have any suggestions been made to you in that way?—They very seldom make suggestions to me, but I have made a suggestion to them. I say that what we want is, that with regard to our reports, they should not be made at haphazard, but that the Chambers of Commerce should guide us as to what they want. At a meeting of the London Chamber of Commerce a gentleman, as it were, reproached me because they had never received a statistical report upon the production of iron in Russia. I said it is my fault, if anybody's, certainly you should have had it if you wanted it, but, on the other hand, why was I not told you wanted it. I want to know what is wanted. One may very often do work which is really not of particular importance, and omit things of greater importance. One wants guidance in those matters.

28,430. Would not the proper way be, if the Chambers of Commerce desired any information of that sort, to put themselves into communication with the Commercial Department of the Foreign Office, who would instruct you?—I distinctly consider so, but the whole thing is rather new. The greater attention shown by our consuls to these matters and their capacity for dealing with them is new; the foundation of Chambers of Commerce is new. I think it will gradually work out; I think it requires to be encouraged, and that the Chambers of Commerce want to be made to understand that the Foreign Office will work on their suggestions in these matters.

28,431. What is your relation particularly with the consuls; have you any kind of jurisdiction over the consuls?—None whatsoever.

28,432. Then the consuls say, in Russia and the particular regions to which you are attached, do not in any way whatever take any directions or instructions from you?—None whatsoever.

28,433. Then any instructions to them from the Foreign Office do not pass through you?—No.

28,434. They are entirely independent of you?—They are entirely independent. I have found the consuls most willing to collect any information I have asked them for. Those whom I may know intimately I may ask privately; but, as a rule, if I want any information, I ask the ambassador to write and direct the consul to furnish it. I would like, if I may, as I understand there has been some question on the subject, to try and distinguish between what I consider to be my duties and the consular duties.

28,435. Yes, if you please?—I have never been in the consular service, but I have acted as consul, and I know their duties. I look upon the consular duties as being purely local. They may be local, as confined to a port, or local in some countries as confined to a district, but they are local, and the consul has to do with the local authorities only. I have nothing to do with such local questions as can be arranged between the local consul and the local native authorities, but once a question is of such a character that they cannot arrange it between themselves, and it is referred either from our consul to the ambassador, or from the local authorities to the ministries at the capital; then always assuming that it is a commercial question, it comes within my function to follow it up with the head authorities, acting under the instructions of the ambassador.

28,436. Supposing that to be your duty, how are those duties performed where there is no commercial attaché; take Berlin, for instance?—There is a commercial attaché for Berlin. There was formerly one commercial attaché for the whole of Europe—Mr. Crowe.

28,437. Does Mr. Crowe take Berlin?—Yes.

28,438. (*Mr. Lawson.*) The whole of Western Europe, I think it is, is it not?—He had the whole of Europe until some of the countries were told off to me.

28,439. (*Chairman.*) Mr. Crowe's residence is in Paris, is it not?—It is in Paris, but to answer your former question, where no commercial attaché is present the secretaries to the embassy have to deal with commercial matters. I must point out that they very often are in a position of disadvantage, from want of knowledge of commercial questions, and they cannot deal so readily with this class of work.

28,440. Following that out logically, are you able to say whether such an appointment as yours might be usefully extended, and whether there should be an increased number of commercial attachés as distinguished from men who do not specially look after commercial affairs?—I think there might be distinctly, but I do not think there ever could be a sufficient number—at least, I do not think there ever would be a sufficient number of thoroughly competent commercial attachés appointed at what they would require as salaries to really cover the whole ground. My own suggestion, if I may make one, is on rather a different line. At the present moment, allowances are given to

diplomatic secretaries for knowledge of special subjects. I do not see why commercial knowledge should not be included. There are always, I should apprehend, sufficient men who take an interest in commercial things, so that in every embassy, one of the junior secretaries—a second or third secretary—might specially undertake commercial work, and get an extra 100*l.* a year for it, as he does now for a knowledge of the local languages.

28,441. Possibly, but would you think also that it might be desirable that when at home or in the Foreign Office they might be attached to and pass through the Commercial Department of the Foreign Office?—I think it would be advisable. I should have them recognised as men who had specially qualified, were accepted as being capable of conducting commercial matters. I think they should either go through the Foreign Office Commercial Department, or work in one of the larger and busier ports abroad in a big consular office; that would give them some insight into business matters, which I think would enable them to perform their commercial duties.

28,442. (*Mr. Lawson.*) May I ask whether that is done in any of the foreign diplomatic services?—No, I do not think it is.

28,443. (*Chairman.*) Have you had an opportunity of comparing the kind of work which is done by foreign consuls for other countries with that which our men do? It is a comparison which is often made in various quarters?—Yes, to a certain extent; but might I continue the other subject for the present——

28,444–5. Certainly, by all means take it in your own way?—I do not think that two officers could possibly do for the whole world; but it seems to me that a very limited number of roving commercial attachés could satisfactorily cope with everything which to my mind it is at all desirable should be done, provided that they had steady help in every embassy from men who were specially attending to commercial questions. When I leave any post at which I am, I do not know when I go back what gentleman to ask, in order to learn what has happened in a particular case. One man may know a bit of it, another man may know a bit of it, and the man who knows most about it may have gone away or may have been removed. I cannot keep a steady current of attention, as it were; it is not possible.

28,446. Is there a growing attention being given to this want in the embassies abroad; do you think the mere fact of your existence is of advantage in that direction?—As regards the embassy to which I am attached, it is.

28,447. You mean that the attention devoted to these subjects has increased in consequence?—Yes. I do not know how far my idea would be acceptable or otherwise. I have thought a good deal about it, because I feel that I cannot do, and have not the opportunity of doing, all that I think might be done with advantage. The idea I have come to is, that in every embassy there should be a secretary who has shown special competence for commercial work; that he should receive an extra sum per annum for having been accepted as fitted to do that work, and that he should specially keep to it. Then when I am away, there would be a man to whom I could refer. When I am away for a week or so, as I am now, I could write to him, and say how is that case getting on, or he could write to me and say such and such is being done. Now when I leave there is a break, and everybody, I think, knows that in commercial matters that sort of break is very disadvantageous.

28,448. Mr. Crowe, I think, has exactly similar duties for the rest of Europe as you have for Russia, Turkey, and Persia?—I believe so.

28,449. Have you any other points that you would like to bring before the Commission? We should be very glad to hear your opinion upon any subject connected with the consular service, or with your own work.—As regards the consular service, it appears to me that in some very important places, we are not properly represented, and that we are not represented as other Powers are.

28,450. Do you mean that there are places where we have no consuls, or that we have consuls of an inferior rank and position in some places where we ought to have a bigger man?—Precisely so. I presume that the Treasury does not give the money; in fact, I pretty well know it is so. There are ports that grow into existence and become of immense importance, where large numbers of our ships go. There is, for instance, the port of Libau, in Russia, which has grown within my knowledge. I cannot say, offhand, how many British ships go there, but I suppose a couple of hundred go within a year. The allowance to the vice-consul there is 10*l.*, and no man could do the work there for that. The actual pen, ink, and paper that is required at that place is worth the 10*l.* note and more.

28,451. Then would you say that the consul there practically does not do the work?—There is no specially qualified man to do it. We had a man there whose affairs I was sent down to report upon, because he got into trouble with the local authorities. He was a very worthy man, and did his best, but he was not really qualified for so important a post. Not being a trained official, he made a grave official mistake.

28,452. Do you think that observation which you make is true to a very large extent?—I think it is. I think that the whole thing requires watching, and that there should be special reports made upon the variation of circumstances, because although I know places that have grown, other places undoubtedly die away. In some places you want to appoint a new man, and you want to give a larger salary; and in other places it might be quite possible that you might reduce the salary. I am afraid that the tendency of the general development of everything would certainly be to increase; it is sure to be; but still there may be reductions as well as increases.

28,453. (*Mr. Lawson.*) In a case of that kind, would you make any recommendation to the Foreign Office?—I should tell the ambassador. Take another instance: Moscow is considered a very important place by the other European countries. I have made a note here of the salaries given by Austria, Germany, and England, to their consuls there. In Moscow, we give a trading vice-consul 80*l.* a year. The Austrians give a consul 670*l.*, and a vice-consul 235*l.*; and the Germans give a consul 600*l.*, and his clerks 480*l.* I do not wish to give a wrong impression, and with regard to that 480*l.* I may explain that there are very many German subjects who are artizans, and that sort of people, on whose account clerical assistance is required to an extent that we do not want in a place like Moscow; so that the clerical assistance at 480*l.* is not a thing which is at all needed by us; but still it is a fact that we, in the most important commercial centre of Moscow, have only got a trading vice-consul at 80*l.* a year.

28,454. Fee allowances?—Yes; that to my mind is disastrous. I cannot call upon that man to give me any information I want unless he chooses to give it, and has the time to do so.

28,455. (*Chairman.*) Should you say from your knowledge of Moscow and the surrounding district, that British trade there suffers from the absence of a better paid man?—I think it certainly does. We do not get such reports or information as we otherwise might, and our consular representative is not in the position to assist the number of English who are there as operatives, mechanics, and foremen, in the same way in which his German or Austrian colleagues would be; he has not the same status as a *consul de carrière*. Helsingfors, again, is a place with which we have got a good trade; much larger than Germany. The Germans have a consul, there at 750*l.* a year. We have a vice-consul whose salary, I believe, has just been increased to 300*l.*: but it is down in the Foreign Office list at 150*l.* The Austrians have no consul there. It is quite unnecessary that they should have, because they have absolutely no trade and no shipping there.

28,456. (*Mr. Lawson.*) 300*l.* and office expenses?—Altogether, I believe, he has got 300*l.*

28,457. (*Chairman.*) As I understand, at Helsingfors the Germans have less trade than we have, and yet they have a consul at 750*l.* a year?—Yes, that is so. Helsingfors is the capital of Finland, which up to now has been, you may say, semi-independent. They have got their own legislative assembly, currency, customs, administration, newspapers, and everything else.

28,458. Is there any other point on which you would like to make any suggestion?—I do not know that there is.

28,459. (*Mr. Lawson.*) As a matter of fact, when you are on your circuit, going through the different countries to which you are appointed, do you make special arrangements with a particular secretary to

Mr. E. F. Law.
14 Feb. 1890.

the embassy or legation to carry on your cases and official work?—I have done so, but I find that he may go on leave or be moved, and that he has no special object in attending to this more than anybody else, and as it merely means his taking a large share of the work gratuitously to himself, he is not necessarily very keen about doing it.

28,460. Do not you get assistance from the ambassador, I mean, would not he say, "Oh, So-and-so must "take the work"?—Yes, but it is impossible for an ambassador to follow out daily details.

28,461. As a matter of fact, it would be, I suppose, not only exceptional, but impossible, to find a secretary who would have really had experience of commercial work?—I think it would be quite impossible. Of course, some have a natural taste for it. Some men would do it perfectly, if they had a little special training and encouragement to stick to it.

28,462. I believe they do send home commercial reports of general interest occasionally?—Yes, occasionally, but those are more, as a rule, reports upon such things as technical education, agriculture, and forests, and so on.

28,463. Matters relating to commerce, not strictly commercial, you mean?—Broadly, but not strictly commercial.

28,464. It is said, I do not know with what truth, that in matters of this kind, they are prone to get crammed for the purpose by some expert in the place, rather than to examine it in an independent way?—They have very little opportunity of examining independently. I have, myself, assisted gentlemen in doing that sort of work.

28,464*a*. What opportunity have they for doing this work?—They can get official publications, and they can ask for information from one or two people whom they may know. There is nothing else they can do; there are no other means they can adopt.

28,465. I have, myself, remarked at the embassies that a report read as if it was very ably drawn up, and I was told, "Oh yes, you can see in what way it has "been drawn up, these reports are simply a scissors "and paste collection of other men's opinions"?—The report is very often a précis of some official publication.

28,466. Or else, I suppose, based upon information supplied by an interested person?—No.

28,467. Then I will not say an interested person—by an expert?—Very rarely. I do not think that the experts would have the opportunity of coming to a secretary of an embassy and inducing him to write a report for their benefit. I do not think that that would occur. But I have not the least doubt if a man is only dependent upon official information, and has no general commercial knowledge, and if he then goes and asks someone whom he looks upon as an expert, that his report would be, of course, very liable to be coloured by the particular view which that man wishes him to give.

28,468. Do you believe that if an obligation were laid upon every attaché to pass a certain period of time in the commercial department of the Foreign Office, he would gain very much?—Some of them would gain nothing, some of them would gain a great deal.

28,469. You mean that it would depend upon the man?—The man who had a taste for it, who had any desire to get on in that way would gain immensely, but many of them, no doubt, would be of no use in that respect, and they have other functions entirely different to perform.

28,470. What period of time would you think sufficient for the man who shows aptitude for that?—It depends upon the man himself very much.

28,471. Supposing you had to say, would you recommend that he should pass six months or a year in the Foreign Office?—I do not think six months would be of any use.

28,472. Would you say a year?—At least.

28,473. At the present time every attaché does spend a year, I believe, in the Foreign Office?—He spends his time in the Foreign Office simply copying despatches—it is necessary work, undoubtedly—in order to get him into the general way of how those things are done, but he does not do any work in the sense of having to use his brain when he is there. Commercial work can only be learned in the Commercial Department.

28,474. Do you think that in the preliminary examination it would be possible to introduce any fresh test that would require a man to devote some little time to subjects cognate with commerce before he came up?—No, I do not. I think it would be exceedingly difficult to devise any preliminary examination which would test a man's commercial ability, but if a man is going to pay special attention to that work, I should, after some training, try very hard to do something of the sort. I should make him give a précis, for instance, of commercial information. It would be difficult to give him an examination, but I certainly should try to do something to test him. As a matter of fact, when a man is taken into a business office he is never put through a competitive examination; that is the last thing that a business man would do with him.

28,475. Have you always found, among our consuls where you have been, a readiness to afford you all the information they had?—A perfect readiness and the greatest goodwill in every possible sense.

28,476. Then the relations between the consular and the diplomatic services, so far as your experience goes, are very satisfactory?—First rate. I think that the consuls sometimes have a feeling of disappointment in regard to their reports, which some of them have laboured at very conscientiously and have really taken great trouble about. They never realise that they are appreciated. The consul simply sends them on; they are printed, and appear in print, but the consul very often feels disappointed. They have told me so. They do not know whether they have done themselves any good by their work, and they do not feel any confidence that they have been appreciated. If you ask me the question, and I try to find something wrong in what is going on, that is absolutely the only thing I can possibly say.

28,477. Does that spring in many instances from the absence of any real chance of promotion?—No, I think it is that the consular reports go direct to the commercial department, and there is such a number of them sent in, that if polite letters had to be written about every one you would have to keep several men specially doing it.

28,478. I suppose polite letters are written to the secretaries of the embassies when they send in able reports?—No, the ambassador would see the report, and the secretary of the embassy is there beside the ambassador, and if the ambassador thinks it good he not only compliments him upon his work but he writes a despatch, and says that he encloses Mr. So-and-So's very valuable and highly interesting report, and the gentleman whose report it is, does thus receive that little encouragement which I think the consul would like to receive.

28,479. You yourself, I suppose, see something of the Turkish consular service?—Yes, something, but so far very little.

28,480. Do you think on the whole that the class of men which open competition in that service is bringing in is the class of men which you would like to see occupying those places?—I should not like to express a general opinion, because I have not yet seen enough of them, but I should fancy it was.

28,481. In Persia, to which I see you are appointed, the consular service is upon the general footing, and there is no competitive examination, is there?—I do not know. I have understood that the institution at Constantinople was expected to furnish men for Persia, but up to date it has only furnished one man.

28,482. I see there are three consuls in Persia, is that the consul at Resht?—That is the consul at Resht; he has just moved from Tehran to Resht.

28,483. Do you believe on the whole that you do better and that the public gets better information where you have these consuls than where you have the ordinary commercial consuls?—Yes. From the ordinary commercial consul you get simply nothing unless you ask him. The other man always hopes that his report may do him some good. The man who is simply a commercial consul never sends you a report unless you specially ask him, and then it is a favour.

28,484. You said you were in favour of grouping countries for the purposes of the consular service?—Yes.

28,485. Then you would have promotion from post to post within each group?—Within each group.

28,486. Not outside, of course?—Not outside, but the groups must be made sufficiently large, because if you cramp them too much you absolutely do away with the promotion.

28,487. What is called the scale or ladder, then, would be geographical within the group?—It need not necessarily be geographical. Take, for instance, the Spanish language. Doubtless the Spanish language would jump across from Spain to South America; certainly, if you put Spain and Portugal and Italy together, you would then jump across to South America.

28,488. To Mexico too?—Yes.

28,489. Language should be the basis of the division?—Language and political and commercial connexion. Now there is no connexion between the Turkish, Persian, and Russian languages, yet I would put those three together for obvious reasons—they are all mixed up together.

28,490. (*Mr. Harvey.*) Politically, do you mean?—Politically and also commercially. A good deal of the trade to Persia is passing through Turkey and through the Caucasus.

28,491. (*Mr. Lawson.*) Do you believe that as commercial attaché you yourself get as readily at the commercial man as the consuls, because I heard that questioned by one of the witnesses?—The commercial men in a town where I do not live, of course, I do not get at as readily as the consul who does live there and may know them personally. But I am speaking of the natives, the resident British merchants I found, wherever I went, were delighted, the moment they heard I was there, to come to me and tell me all their grievances and desires. With regard to local questions, when I get on the spot I am greatly dependent for what I call local information on what the consul tells me. Then, in addition, I may have, and probably should have, an introduction to a banker, or merchant, or one or two people, and I receive them.

28,492. Then there is no diplomatic etiquette that prevents you doing so?—No.

28,493. You gave a lecture the other day before the London Chamber of Commerce, in which you advocated, to a large extent, I think, the idea of commercial museums?—I rather meant it to be the other thing, and to object to making an exhibition, which I have an idea that they are going to do, by collecting all sorts of things. I urged that instead of that, what I believe we want is a collection of samples, which should be constantly changing—not to litter up a place with a lot of dead stuff, such as you often see, but to have every novelty. I do not care what it is, whether it is a new plough or a new potato, but let it be shown for a short time and well brought forward, and then out with it.

28,494. Of course, we have nothing to do with independent bodies, such as chambers of commerce; but with regard to the Foreign Office and the diplomatic service, what particular assistance do you think they should render to British commerce?—I think the closer their connexion is and the more they see what our people are doing, the more commercial men acquire confidence in the desire and ability of the Foreign Office to work for them, if they would say what they want, the better.

28,495. Suppose they ask for certain information?—If they say we want reports of such and such a thing, the consuls should be instructed to make them.

28,496. And the same if they ask for samples?—Yes; but I must say that chambers of commerce on their side do not give all the encouragement to our labours that one might expect. I sent home any number of samples which I had collected with considerable care, priced, and so on, and I have never had (except from the Dundee Chamber of Commerce about some jute which I found on the Caspian) a single communication from any of them, good, bad, or indifferent, or saying we like to receive these, or we want to know more about the other. Well, that does not encourage one very much.

28,497. (*Mr. Cleghorn.*) Your headquarters being in St. Petersburgh, am I to understand that when you go out you are sent out upon a special question to visit a certain place, or do you go there periodically, or how do you manage your journies?—It is purely accidental, according to what appears necessary. We have had a great many questions about the difficulties of port regulations in Russia. Those difficulties were most noted in the Black Sea, and, consequently, I went round all the ports of the Black Sea and saw all our consuls, and the shipping people there, and the local authorities.

28,498. Did you go out there at that time in consequence of those special difficulties having cropped up?—Yes; but I cannot be in as many places at once as I ought to be. I should like now very much to be able, as far as that question is concerned, to go again, because certain changes have been made, and I know it would be very useful if I could go and follow up exactly what actually has been done, and see that the authorities have done what we have been told has been done, because perhaps the local authorities have not fully carried out instructions. It would be very useful if I could do that.

28,499. You would like to go back and see the result of your previous visit?—Exactly.

28,500. Then you do not go out, as I understand it, on a tour of inspection at a certain time of the year?—No.

28,501. You only go out from St. Petersburgh when there is something special to call you?—I equally am supposed to go to Teheran. I went to Persia, and when I had been a couple of weeks there I saw that to arrive at anything I must make a tour through the country. Well, I visited all the principal towns in North Persia, and I went into the bazaars, and so on. That was not in any way a definite plan laid out beforehand. I was simply told to go to Persia—to Teheran. I went there, and when I was there I suggested to Sir Henry Wolff that it would be a proper thing for me to do, and he agreed, and then I made that journey. I should like to do the same in South Persia, but it is a mere question of the possibility as to time, as it is impossible to be in so many places at once.

28,502. Then, as I understand, you think your district or territory is much too extensive for one man to overtake?—Quite impossible.

28,503. Therefore that explains an expression that you made use of in answer to the chairman that it was not possible for you to do what you ought to do?—What I think ought to be done.

28,504. That is the explanation?—That is the explanation.

28,505. Your boundaries are much too extensive for one man to possibly overtake?—Yes. I must point out that supposing in the course of five years I had been round to all those places and had made the acquaintance of the different consuls, and had had an interchange of views with them; and also supposing that there were secretaries at the different embassies with whom I was in steady communication; then when once I had covered the whole territory, I do not say that I could then do the whole of the work perfectly well, but I think that perhaps I might do it fairly well. I have been two and a half years at my post, and I am continually kept at the embassies for things which have to be attended to, but which are, perhaps, minor questions. As an actual matter of travelling, it would take me five years to study all my districts for myself—and I started with the great advantage of knowing Russia beforehand.

28,506. Then, in fact, your work is necessarily very imperfectly done?—Well, I do not attempt to deal with every question, there are many which I have not touched.

28,507. Which are beyond your physical powers?—I have at the present moment made no report whatsoever upon South Persia, because I have not been there; and I have made no report whatsoever upon the Levant, because I have not been there.

28,508. Then, in fact, it is physically impossible for one man to overtake the work?—Physically impossible. I do not think that I am in any way expected to, and I certainly have not attempted to give any report or any information except what I was sure of; but if I know about Russia, I know I can report about Russia. What I know about Persia I can report on, but I know that I should have to leave out South Persia. If I have been on the Black Sea coast and Asia Minor, as I have, I can report about them, but I cannot report about the Levant, I have not been there, and I know nothing about it.

28,509. You only report upon places where you have actually been?—Yes.

Mr. F. F. Law

14 Feb. 1890.

28,510. And upon what you have personally investigated?—Yes.

28,511. You have referred to Moscow, where there is vice-consul who gets 80*l.* a year?—Yes.

28,512. Is he an Englishman?—Yes, the present consul is; the previous occupant of the post was a Swede.

28,513. Is he supposed to be under the jurisdiction of the St. Petersburg consul?—Yes, he is.

28,514. When you go to places like Moscow or Libau or any of those other places which you have referred to, what is the course you pursue? Do you first of all go to the consul or the vice-consul of the place and put yourself in communication with him?—Yes.

28,515. What further do you do?—It depends on the object. If I simply want to know about the general business of the place—I have been in business in Russia myself——

28,516. That anticipates a question I was going to ask: where you got your commercial knowledge?—I had been 13 years in business. I was in the firm of Messrs. Hubbard, of which Mr. John Hubbard, who became Lord Addington, was the senior partner.

28,517. I see you were in the artillery service?—I was.

28,518. And then you were in the commissariat in the Soudan?—I was called out as a reserve officer. I was in business for some years and was called away from it, and that led me to go back to the Government service. I went out unexpectedly and had to leave my business.

28,519. You had previously got your commercial qualifications and knowledge?—Previously.

28,520. Of course that gives you an immense advantage in the post you now occupy?—Frankly, I do not think that I should have been of much use in the post if I had not had the advantages of some such training.

28,521. Therefore, any gentleman who was without similar experience and knowledge would be of comparatively little use?—I do not say that he should have a similar experience, but somehow or another he must have got some general business understanding.

28,522. Would you say that that must be acquired in a business office, and that no term of service in the Foreign Office simply would be of much avail?—I would not say that service at the Foreign Office would not be of much avail, but I do not think it would be equally good. So much depends upon the man. Some people have a natural inclination for business things and some people might go on for ever without acquiring it.

28,523. At Libau the vice-consul gets 10*l.* a year, and he is under the Riga consul?—He is.

28,524. Has he much to do at Libau?—Yes.

28,525. Will he have to refer continually to Riga?—As a matter of fact, he cannot, because questions have to be settled immediately, and it is two days' post there, and it is two days' post back.

28,526. Is he an Englishman?—The present occupant is an Englishman. The man who left the post, having had a row with the officials, was a Russian subject of English origin.

28,527. I suppose, as a general rule, you would prefer an Englishman always to represent England?—Certainly. I might have mentioned another place where we have, as our shipping people here will tell you, very important interests, and that is Revel. At Revel, I think, we give 20*l.* a year. I suppose there are 200 or 300 English ships a year visiting Revel.

28,528. To go back to what I was pointing to before, after you open communication with the consul or vice-consul, and talk with him, do you visit the merchants?—It depends; the situation is so different in different places. In most of the places in Russia I have, by this time, connexions of my own.

28,529. In Russia?—Yes. In almost every place in Russia which I have to go to.

28,530. That is to say, you have made their personal acquaintance?—Yes. After seeing the consul I would go and see the native people—the Russian people; there are not many that are worth seeing for my purposes, in fact, very few, but I would go and see those that were. Then I would either ask the Englishmen to come to me or would go to them.

28,531. Do you mean the Russians who have trading connexions with England?—Not necessarily I wish to know how business in general is going on.

28,532. Then you do not confine yourself to merchants who trade with England?—No.

28,533. Who trade either to or from England?—No. I want to know generally how things are going on, just as one would on the Exchange ask what was going on.

28,534. Do you, as a necessary part of the inquiry, see all the English merchants of any importance, or the shipping agents?—At the ports, I have asked the consul to inform them that I was there, and to arrange with them to come and meet me, and have offered to put my time entirely at their service whenever it suited them best. I have asked them to come to me, but to fix their own hour.

28,535. Do you find that your invitation is responded to?—Yes, it has been fully.

28,536. And that you get free communication with them?—Perfectly.

28,537. Do they keep anything from you?—These people all have their own interests, and I do not always find that what they tell me corresponds to the view that I finally take.

28,538. Just so; you hear what they have got to say?—Yes, I hear what they have got to say.

28,539. And then judge for yourself?—Yes. They are inclined to make complaints which do not appear to me always justified. Sometimes they are right, but they come for the purpose of making complaints, and if people come for the purpose of making complaints they generally make a great many.

28,540. Do you report all this to the ambassador, or how is it you deal with the information you acquire in that way?—Where there have been any serious complaints I have made a note of everything complained of, and I have done it very systematically in some cases; at Odessa, where there were great complaints, for instance; and I have done more or less the same elsewhere. I made a note of all that they stated, and in their presence I have read it over to them, and said, "Now these are what I understood to be your chief "points of complaint, you say such and such was the "case." Then I make such further inquiries as I think necessary, and we take such action as can be taken in St. Petersburg with the Russian authorities to try and get these complaints remedied.

28,541. In a place like Odessa there are, I suppose, a great many English merchants and a great many Russians who have English connexions?—There are not many Russians who have English connexions.

28,542. Are there not?—No.

28,543. Are there a number of Englishmen?—There are a number of Englishmen connected with shipping, but as English merchants, properly so called, not. An English merchant is very rare out of St. Petersburg; that is about the only place where he is.

28,544. Well, their agents, or agents for English houses?—No, not even that. A few English houses may have correspondents, but that is rare. The business from Odessa is chiefly, and almost entirely, the grain business, and grain business is done by brokers, who get their orders by telegram. They ship grain to the London market, and it is sold there; except financial business, they have very little to do with England.

28,545. Then it is merely an agency business, or a broker's business?—Hardly even an agency business, because these grain-shipping houses buy and ship to London, according to the reports of their London correspondents, and they sell in London or Havre, or wherever it may be.

28,546. At Odessa, we appear to be pretty well represented. There is a consul-general there who has 900*l.* a year, with 350*l.* for office expenses, and there is a vice-consul who has 300*l.* a year?—There is.

28,547. That is a very important place, I know. Do you consider that a sufficient staff, and is the pay sufficient?—The consul-general is obliged out of his own pocket to pay another clerk. I do not know what he pays that clerk, but I should assume about 200*l.* a year. He also has to pay out of his own pocket for his office in which work is done; he cannot pay less than 200*l.* a year for that; that is 400*l.* a year. Then I suppose his sundry expenses would amount to 50*l.* a year. I should say it costs him 450*l.*, and the effect is that he is

100*l.* out of pocket. We must remember that that salary and those allowances were fixed at a time when there was not the amount of shipping at Odessa that there is now. If you ask me about this particular question, I certainly think that where nominally a consul is given clerical assistance, such clerical assistance as is absolutely necessary should be fully paid for, but in this case the Odessa Consul-General has to pay for a clerk out of his own pocket.

28,548. It is included in his salary, I suppose; does he engage in any other occupation?—No, and office expenses are not supposed to be included in salary.

28,549. He does nothing else?—He is not allowed to.

28,550. Does the vice-consul do anything else?—No, certainly not, he is not allowed to.

28,551. He gets 300*l.* a year?—Yes. Of course he has no expenses; his 300*l.* is net. In some places the consular allowance for clerks and so on is quite sufficient; in other places—Odessa, which you happened to mention, is one—I think it is not sufficient; in fact I know that it must cost more than is allowed.

28,552. It is a very important place, of course?—Yes; the German consul-general there gets 1,350*l.* a year, and 225*l.* for a clerk.

28,553. At Odessa?—At Odessa. The Germans expend about the same amount of money there that we do. They have no vice-consul, but then they have not the quantity of work to do that we have at Odessa, because they have not the ships.

28,554. I was going to say that their amount of shipping must be a very small quantity as compared with the English shipping?—Practically none.

28,555. Then from that I infer you argue that the English representative is not adequately paid?—As regards his office allowance he is not. I would not like to pretend one way or the other to offer an opinion as to his salary being right, but his office allowance does not cover his office expenses, and could not do so, although, I believe it is meant to do so.

28,556. Now, at Cronstadt, for instance, the allowance there is 30*l.* a year?—This is a case for the exercise of discretion. It has been possible to do the work at Cronstadt perfectly efficiently for that 30*l.* That is an accident, for this simple reason, that it so happens that there is only one shipping agent, who has had the whole of that very important business in his hands for a great many years—an old established firm.

28,557. English?—English. That firm finds it in its interests to take this honorary vice-consulate, and to let one of their clerks attend to the detail duties. The British Government have profited by what that firm has found to be to its interest. That is an exceptional case, of course, but that may occur elsewhere, and when it does occur, naturally, from motives of economy, it should be taken advantage of.

28,558. Of course you know, as every one knows, that Cronstadt is the port for St. Petersburg?—Yes. On the face of it, of course, that 30*l.* a year for Cronstadt is even more absurd than what I have pointed out for Libau and Reval, but, in reality, there has been nothing wrong there.

28,559. Do you visit Cronstadt in the course of your duty?—I have never been there.

28,560. You have never been there?—I have passed it, but I have never been there. I have no business there at all; anything that goes on at Cronstadt is purely local. The customs and administration of Cronstadt is in St. Petersburg.

28,561. Have you been to Archangel?—No, it is a long journey.

28,562. Have you been to Helsingfors?—Yes, I have been to Helsingfors. I have been to all the Finnish ports.

28,563. Kieff?—Yes, and all the Black Sea ports, all the Finnish, and all the Baltic ports.

28,564. Are your reports sent home periodically?—They are sent when I have either completed a journey or completed a subject.

28,565. Do you report to the ambassador?—I report to the ambassador when I am at my post, but if I was reporting here, I might report direct to the Foreign Office. No rule has been laid down, but as a matter of course, if I am in Russia, I report to the ambassador.

28,566. In your evidence you have stated that certain ports decayed and others the reverse?—I said that they might decay.

28,567. Whose province is it to point out these facts to the English Government?—As far as I know there is no special official appointed by the Foreign Office whose particular province it is, but doubtless the Consular Department of the Foreign Office looks after these matters.

28,568. Would not the ambassador in the country or the minister have his attention called to it?—The ambassador would be unlikely to be aware of it; as if there was a consulate at a decaying port, it would probably be a small port to begin with, and, therefore, a small man there, and you would hardly expect a small man to say that his own post is becoming useless.

28,569. No, but you would expect a small man to say if his port was becoming increasingly useful?—I should, fully.

28,570. But then there are returns, are there not, sent in to the ambassadors as to the amount of vessels?—They are not sent to the ambassadors; they are sent to the Foreign Office.

28,571. Direct?—Direct; and returned as printed matter, with much other matter to the ambassadors. Unless specially asked for by the ambassador, the consular reports are not addressed to him, but go straight to the Foreign Office. That is because there has been a demand for rapidity in the publication of commercial news. I quite see the necessity of it, but on the other hand, it has distinct disadvantages, as severing the connexion between the ambassador and the consul. In an extensive empire like Russia, if you are to have rapidity of publication of commercial news, the consul must send his reports direct. As I say, that has a disadvantage undoubtedly, because it breaks the personal relationship between the ambassador and the consul, and prevents the ambassador taking that interest in the consul's report, which he would otherwise do.

28,572. (*Lord Lingen.*) In the district that you visit, are there many native consuls or vice-consuls?—In Russia there are several who are Russian subjects.

28,573. Every country that appoints consuls has a large number who are subjects of the country in which they reside, but who are consuls of the appointing government. We should find, I imagine, all about the manufacturing districts of England that there are many Englishmen who are consuls for Germany or other foreign countries?—I should fancy that was more the case in England than in Russia a great deal, because the chief consular service in Russia, after the English—and we have chiefly Englishmen, although we have some natives,—is the German service, and both the Germans and the Austrians have plenty of their own subjects in the country.

28,574. I did not put the question as to the status of these consuls with any political object, but rather with this point in view, that where you had got a Russian subject, we will say, for a vice-consul, I presume that he is usually a trader?—Certainly; he must be.

28,575. And he would not be a salaried person?—Never; although he may have what we call an allowance.

28,576. He would usually be a native trader?—He is not a consul *de carrière* (we have no English expression exactly equivalent to that); his career is not that of a consul.

28,577. You laid a good deal of stress, in your evidence, on the local and commercial information that a consul ought to have, in order to keep his government duly informed. Now, supposing that this native trader, who is a British vice-consul, is a decently honest person, and not regarding him on his diplomatic, but on his commercial side, he is just the person we want, is not he?—Yes, but we have to bear in mind his personal commercial interests.

28,578. He knows the native language?—Yes.

28,579. He knows the native wants?—Yes.

28,580. And he knows the trade?—Yes; but, if I may say so, he is not exactly the person we want from the political point of view.

28,581. I will come to that by-and-by; commercially, he is the person we want?—Yes, within certain limits; but he is afraid of his own government; and he is

Mr. E. F. Law.

14 Feb. 1890.

always afraid of anything he says being printed and exercising an unfavourable impression on his own government, which will prejudice him; so that he is never fully satisfactory even from the commercial point of view.

28,582. Would you extend that observation; if to Russia, then equally to Turkey and to Persia?—Certainly. I do not imagine there can be a country where that observation does not apply. If a man is a foreigner, he considers if his reports or observations become public, in print or otherwise, what effect they will produce on the authorities of his own country.

28,583. Subject to those drawbacks, his knowledge of the local trade, and his knowledge of the languages are points in his favour?—Certainly; and I would go further, I would say that they may render him more valuable to me as a visitor seeking information. Otherwise I might have to go to a recently appointed Englishman.

28,584. Who is it in Russia—is it yourself, or is it the several consuls, British subjects, who make the reports to the Foreign Office on commerce?—Every consul is obliged to make an annual report on the trade of his district.

28,585 Is a native vice-consul in any official relation to the nearest British consul who is a subject?—Certainly.

28,586. He is?—He receives his appointment from him, not from the Government, though the consul cannot make the appointment without the previous sanction of the Secretary of State.

28,587. Not from the Government?—He has not got the Queen's commission. His appointment is from the nearest British consul—the British consul of the district which includes his vice-consulate.

28,588. Would your experience lead you to say that these native vice-consuls are duly consulted before the consul makes his report?—The practice is that each one of them shall be asked to send in a report to the consul, who has these reports before him when he makes his full report. Their reports are printed, but with many of them it would be absolutely useless for the consul to ask them to make a report, because they would not do it, they would not take the trouble; they are not paid. The consul is very glad to get their good offices, but he cannot ask them for what he knows they would not do.

28,589. Supposing they would not take the trouble, putting out of sight any other motive for the moment that might deter them, if they would not take the trouble to make these reports, what induces them to be vice-consuls at all?—A certain position; sometimes merely the question of being able to figure at the local governor's assemblies, sometimes commercial interests.

28,590. Still, if the man has got something that he values, he has got something to lose, and to that extent you have got a pull over him?—You have.

28,591. If he was perfectly satisfied that his communication to the nearest British consul was a confidential one, and that his own name would not figure in the consul's report; that under no circumstances would his report, whether written or verbal, be divulged in that way, do you think you would have the benefit of his commercial experience?—I doubt it; in the first place because, in the countries in which I work he never could give full satisfaction to his own Government or to us.

28,592. Would the conclusion from what you have said, be that you would rather be without the native vice-consul?—No, certainly not; you must have some representative, and as from motives of economy you are not given Englishmen you must take the natives to give certificates and generally attend to local detail business.

28,593. What is the good of him if you cannot trust him?—But you can trust him to smooth difficulties with the local authorities; that is one of the chief duties of a consul, as there are continual difficulties arising with the local authorities.

28,594-5. Now we are getting on to what we may call their diplomatic side, for they have a diplomatic side, have they not?—Their duties are somewhat diplomatic; they are in connexion with diplomatic affairs. For instance, a sailor gets drunk in the street, and the policeman illtreats him, or he illtreats the policeman, as the case may be, the local native consul would go to the local native authorities and do the best he could in the interests of the sailor.

28,596. Now I want to come to a point starting from that basis; are commercial travellers sent, to any very considerable extent, from English, German, French, and American firms, over the district that you visit?—German, very large.

28,597. Larger than any of the others?—Very much larger, but also sometimes representing English firms.

28,598. (*Mr. Cleghorn.*) In conjunction with German firms?—Yes, the ordinary commercial traveller in Russia, you may take it, in nine cases out of ten, is a German.

28,599. (*Lord Lingen.*) To that extent the Germans, I presume, are in a better position for dealing with the natives?—Yes, they are, but chiefly in the smaller trades. When there are large orders, important orders, then it is not the ordinary commercial traveller, such as one sees every day about the country, who does the business. When there is a large order I think that our people are fairly wide awake.

28,600. But how do they bring the goods that they have to trade in under the notice of the natives who would buy them, if they had not sent commercial agents?—In Russia our goods are fairly well known. There are a certain number of commercial agents who come out, but a very limited number. I think more might be done. In Persia we have a few established houses, and I think that our established houses of business there stand better than those of any other nation.

28,601. But then those necessarily can be only at certain points and centres?—That is all.

28,602. What I wanted to come to was this. Chambers of commerce are never weary in making complaints that the Government of this country does not do enough for them, but we have got this fact, that in the district that you are acquainted with, the German traders send out, at their own expense, and apart from their Government agents, which our commercial people do not send out to anything like the same extent?—Certainly.

28,603. To a certain extent, therefore, the Government, if it ever was heard on its own defence, might say, you do not do as much for yourselves as the Germans do?—They do not, and I have already instanced to-day the fact that the samples of things which I sent home did not meet with the response which I think they might have met with. I think that officials who interest themselves in trade would always be glad to find that their efforts meet with some response. If I take a collection of samples, as I did, of every kind of textile that was in vogue in the market, and put to each a price and the country of its origin, I think that that should be of interest as commercial information. I did that, and sent home large and carefully prepared samples, and I have never heard anything about them good, bad, or indifferent, or whether anybody cared twopence.

28,604. (*Mr. Cleghorn.*) Did you send them to the Foreign Office?—They were passed through the Foreign Office to the Chambers of Commerce.

28,605. (*Lord Lingen.*) Of course, a commercial house or two, established at great points in a country like Persia would not at all be able to diffuse the local trade in the same way that an agent going about with samples would?—I do not think in Persia a European agent going about with samples would be of any use.

28,606. Would a native agent?—A native agent might, and the Russians do that more or less, as I have already mentioned in my published report; they employ native agents, that is to say, Armenians.

28,607. In the course of your service have you served in the Foreign Office itself?—Never.

28,608. (*Mr. Harvey.*) I believe you are one of the two commercial attachés, are you not, the other gentleman being at Paris?—Yes.

28,609. What were the circumstances that led to your appointment?—I cannot say exactly. I presume that it was in consequence of Mr. Bryce's Committee. I know that I interested myself very much in it, because I took a very great interest in a desire of mine to see the Imperial Institute turned to what I thought might be very important uses for trade.

28,610. And so you became a commercial attaché at St. Petersburgh. You have made a suggestion to us

that the future constitution of the consular service should depend upon groups of places that are bound together either by a similarity of language, or by a similarity of interests?—Yes.

28,611. You suggested that they should be formed into groups, and that the promotion of the consul should be within each group?—And that their admission into that group should depend upon their knowledge of the language or something connecting them with that group.

28,612. Supposing that to be the case, you would, I suppose, wish that there should be an examination in a particular language that was predominant in that group?—Certainly, as far as the examination was the means of entrance, but I have not committed myself, and should not wish to do so, to the idea that entrance should be absolutely only by examination.

28,613. You would wish, I suppose, that if a language is to be thoroughly learnt, the candidate should not be too old, and that he should be a young man?—I do not see that that matters.

28,614. The present ages of admission to the consular service are between 25 and 50. Would you suppose that a man of, say, over 40 years of age going into any new district would be as rapid in the acquisition of the language as a young man?—No, but I would not have a man definitely appointed who did not know the language.

28,615. Does not your proposal by implication carry with it the condition that the entrance should be at a much lower age than the maximum limit under the present system?—Not necessarily. I have never heard of men being appointed at that age, and in practice I should not think that it ever happened that a man entered the consular service at such an age. I do not see that the age matters if the necessary qualification is secured independently of age. If qualification depends, say, on an examination in the language, it does not matter what the age is as far as I can see.

28,616. Then once within this group, would you appoint him to a subordinate office and let him by merit and ability rise to the higher posts? Would you appoint him, for instance, on the same lines as we have in the case of China and Japan service?—Yes.

28,617. You know something of that service, I think?—Very little. I do know something as I have been out there on a visit.

28,618. Speaking broadly, would you like such a system as that applied to the whole service?—Yes, as far as I know.

28,619. You know, of course, that that involves an examination and a much lower limit of age than the age of admission to the service?—Yes.

28,620. So far as you know that service, would you go the length of saying that you think it would be better manned on those lines?—As long as those were not the exclusive lines, because there are distinctly places that require a special man, and there are distinctly special men who might fit particular places and whom it would be desirable to get in. You may find a man who has attained great local knowledge of a country and of its trade or of its politics or of anything else, and who at the moment that you happen to want a consul in that country is available. Now it would be, no doubt, a very disastrous thing should such a man be shut out.

28,621. So long then as power were preserved to the Secretary of State for that purpose and to that extent, would you say that you would prefer the system of admission which now obtains in the China and Japan service?—Yes.

28,622. Would you?—Yes.

28,623. Do you come much in contact with the consuls who are not paid a salary — the unpaid consuls?—Yes, I was one myself during a very short period.

28,624. Do you find that their commercial knowledge is as good as that of the consuls *de carrière*?—They very often may be much better, because they are practically in business; whereas, very often a consul in the consular service is a man whose whole time is taken up by details of shipping, and protests, and complaints of sailors, and this, that, and the other, and he has not the time, even if he has the desire, to acquire that sort of commercial knowledge that a commercial man has.

28,625. I suppose the unpaid consul could hardly be expected to draw up a report of any particular trade?—It entirely depends upon his good pleasure to do so, and you cannot force him to.

Mr. E. F. Law.
14 Feb. 1890.

28,626. As a matter of fact, do you know whether many of our reports are written by those men?—Very few. I have always found that if I saw them personally I could get very good information from them; they are useful men to get information from if you see them personally. They are naturally civil to you, it stands to reason they would be; but as to writing a formal report, they do not wish to compromise themselves or to show themselves; it is against their interest in every way possible to do it.

28,627. (*Mr. Lawson.*) Very often, I suppose, they have not the knowledge of the methods required?—It is against them in every possible way.

28,628. (*Mr. Harvey.*) So far as your experience has gone, how do you draw the line between the duties that you yourself perform and those which you think ought to be a part of the ordinary routine of the consul?—As I said, between such questions as can be and should be settled locally, between the local representative of the British Government and the local authorities, and such questions as arise from the consul not being satisfied with the action of the local authorities, are referred by him to his ambassador, or such questions as are not within the competence of the local native authorities. As regards reports and information and statistics, the consul can only give, and should only try to give, local statistics and information. The commercial attaché's business is to collate, compare, and report on these, with such additional information as he may himself have; besides which, there are evidently statistical, financial, and other questions which can only be considered in connexion with the country as a whole, such as a financial report. There is no consul whose duty it is to do that work; it is distinctly the business of the commercial attaché.

28,629. So that, I suppose, you would say, that it is quite possible by adhering to that distinction to feel sure that the appointment of a general commercial attaché, like yourself, does not have the effect of rendering the ordinary consul limp as to the discharge of his duties; that is to say, he may argue, "Well, "I will not trouble about that, because that will come "within the purview of the commercial attaché's "duties?—The only man whom there can be the smallest idea that it would effect in that way would be the consul at the capital, because up to the appointment of commercial attaché, certainly more has been asked from the consul at the capital than is, ordinarily speaking, comprised within the duties of a consul. Of that extra demand he is undoubtedly, to a certain extent, relieved by the appointment of a commercial attaché, but only to a very small extent, because the commercial attaché is very seldom there.

28,630. Does the appointment of a commercial attaché relieve the consul-general of any of his functions?—The consul-general and consul, in the way we are considering the question, are synonomous terms.

28,631. Have you any relation with the Board of Trade in the discharge of your duties?—None.

28,632. Unless the Board of Trade chooses to communicate with you through the Foreign Office?—That is all.

28,633. (*Mr. Lawson.*) Are you satisfied, may I ask, with the way in which your reports are treated?—Yes, perfectly.

28,634. Do you think they reach the public, and the commercial world, as soon as you can reasonably expect?—Yes.

28,635. (*Mr. Harvey.*) Would you consider it part of your duty to report upon any place in which the trade had so decayed that you thought a vice-consul could be dispensed with, supposing that you met with such a case?—If I met with such a place I might mention it casually to the ambassador, but I should not consider it my duty to make an official statement on the subject.

28,636. That I suppose, in the ordinary discipline of the service, would be the duty of the consul-general, would it not?—Yes, if it were a vice-consulate under a consul-general it would be, I presume, but I do not undertake to answer for certain.

28,637. (*Mr. Cleghorn.*) Would you consider it any part of your duty to act in the reverse case?—Yes, I should. It is no part of my duty, as far as I know,

Mr. E. F. Law.

14 Feb. 1890.

to try to cut down anybody's post, but it is my duty to point out where our trade appears to suffer from want of anything.

28,638. (*Chairman.*) I have understood, that on the whole, from your evidence—of course it is difficult for you to make the recommendation—that you would think it might be useful if you, as a commercial attaché at St. Petersburg, had an opportunity of reporting upon the growth and decay of Russian ports or centres of British trade, and so forth, with a view to the direct increasing of the importance of some consulates, and the reverse, and so on, according to circumstances?—Yes, but I should again repeat, for fear that too much may be made of my having said that places might decay, that, as a matter of fact, I have not, in my districts, come across a place which has so decayed. There are, perhaps, such places elsewhere, but I am not in a position to report either one way or the other. As far as I know and understand my duties, it certainly would not be considered my duty to report in favour of the abolition of a post, whereas distinctly saying that I think a consul's salary should be raised, is equally not within my limit of duties. I may point out that the importance of a certain station has developed, and that the work consequently has become very heavy; and those are, in fact, the terms in which I should report. I should never take upon myself, and could not do so, to say that the salary or emoluments were inadequate, but I would point out that the importance of the place had increased, and the work, consequently, with it.

28,639. You do that now?—Yes.

28,640. (*Mr. Harvey.*) You have expressed a high opinion of the consular reports on the whole?—Yes; on the whole.

28,641. Do you find that those consular reports, handed in to our Foreign Office, are used in other capitals, for instance, would the merchants at St. Petersburg care to see our consular reports on Russia?—Yes, I think so.

28,642. Do you think they are read in other countries?—Not very largely; I do not think the world at large sufficiently knows them. The Russian Government, who ought to be good judges, make great use of them.

28,643. That you know?—Yes. Of course, being officials, they know about it, because their embassies report, but I do not think that amongst the commercial world at large, the existence of these reports is sufficiently known; they have not got popularity somehow;—they have never been advertised they have not been run as a business.

28,644. Take now the question of tariff; it would seem to me from my knowledge of our commercial papers, that in all probability we know more about the tariffs of a great many foreign countries, from the consular reports, than the natives know themselves?—I should think we do.

28,645. Would it not be quite reasonable for a merchant in St. Petersburg to look at our blue books to find out his own tariffs, would our blue books be as accessible to him as his own literature?—No; he would have, as a matter of fact, a great many difficulties to contend with; he does not know where to write to get them, and then they would have to pass a censorship to come into the country to him. There are many difficulties in his way.

28,646. In fact, I suppose, you do not meet with them in Russia?—No, not at all.

28,647. I take it that you would be of opinion that every consul should, on appointment, pass a short time in the commercial department of the Foreign Office?—I did not say the consul should; if the idea was adopted of secretaries in the diplomatic service being specially recognised, and receiving a special emolument for attention to commercial affairs, I think that a part of their qualification for that special position should be having passed a certain time in the commercial department of the Foreign Office, or in the office of some large consulate.

28,648. Now suppose some such arrangement as that were made, how would you be able to ensure that the secretary so selected did give time to commercial affairs?—You would have to trust to the ambassador handing these affairs over to him, they come in as a matter of daily work, and must be attended to by some one as such.

28,649. That is only I suppose when commercial questions take the form of a complaint by some trader?—Yes, though they may take a form something more than a complaint. There are general questions put forward by chambers of commerce. I have in my pocket from the Hull Chamber of Commerce, a note about grain sacks. That is a very long question, but it is not a complaint, so to speak; it is a question that is continually going forward. We have got the Russian authorities to make certain concessions. I have made propositions, and they have made propositions, so you see it is a long question that is being followed out. If a particular gentleman has that sort of question handed over to him, I think it will very soon transpire whether he is paying attention to it or whether he is not.

28,650-1. Then, at present, you have no guarantee in the present construction of our embassies that there is anybody there who understands these questions at all?—We have no one whose special duty it is, or who has had any special opportunity of acquiring technical commercial knowledge; it is the general duty of the chancery. If I might be allowed, I should like to point this out with reference to a question that you asked just now. Supposing that any gentleman in the chancery did receive special pay for attending specially to commercial work, I think you might trust his colleagues to put all that work on to him, and I do not think he would escape doing it.

28,652. Is your time usually occupied with the matters that come before you of the nature of grievances and complaints, and requests for information, or of general observations, that you may initiate yourself?—It is rather difficult to say, because it depends, to a certain extent, upon what country I am in, and how long I have been there. In Russia, now, I have got a great many general questions, because I have been there a great deal. There has been a very large question which has been occupying my attention, the whole time, as regards the port and customs regulations as distinct from tariff. That involves also innumerable detailed questions in different ports as to what is being done; how the authorities work; how they carry out the laws or, rather, the regulations, what is wanted, and so on; but, if I were to be sent to Berlin, for instance, as I do not happen to have ever resided in Germany, naturally my first work and my chief time would be taken up with simpler questions and those which might be directly put to me until I got to know more about the place.

28,653. Do you know whether the French nation has any officer corresponding with yourself?—Not that I know of; I am pretty sure that they have not.

28,654. Nor the Germans?—I think I have heard that the Germans intend to follow our example to a certain extent but they have not such an officer now.

28,655. There is a general impression that the German consul, speaking broadly, helps the German trader very much more than the English consul helps the English trader; would you say from your experience that that is true?—I think that the German consul with the local authorities, in a local business question, using the word "business" quite separate fron anything that is concerned with laws or with regulations, will do for the German trader what the English consul would not, and, in my opinion, should not do. He will take an individual trader, and recommend him to particular authorities in a very strong manner for particular business. That the English consul will not do, and, according to my experience, speaking from a business point of view, should not do.

28,656. Does not such intervention as that on the part of the consul—intervention obviously for the purpose of securing the personal interest of an individual—weaken his influence very much when required to be exerted in more important matters?—Yes, I should say that it does; I should say that the English consul stood higher in that respect.

28,657. You would say so?—Yes; I think it is thoroughly known that the English official has no personal interest, and does not exercise any influence in favour of individuals in business, and I think it is most desirable that that should be maintained.

28,658. In what intelligible sense can an English consul help a trader at all?—He can help him by giving him information generally about his business, particularly in such countries as those where I work. A stranger does not know how to go to work; he does

not know the business habits; he does not know the forms; the whole forms and whole nature of the business is different; the consul can guide him about that. If the trader comes out in a difficulty, say, to recover a debt, the consul, perhaps, can give him information —whether he is likely to be paid, or whether he is wasting his time; he can give him general information about law proceedings; he can recommend him to a trustworthy lawyer.

28,659. (*Mr. Lawson.*) He helps to surmount officialism, does not he?—Yes, and he helps him with the officials when official things come in. I do not think it could be better expressed than by saying that he helps him to surmount officialism.

28,660. (*Mr. Harvey.*) In fact, he, being a *persona grata* to the authorities, can do more than a stranger?—Yes; he knows the language, the manners, and the ways of the country, and he can give all the benefit of his experience of the country in that direction to a man who arrives as a stranger. In all these matters comes in the necessity of great tact on the part of the consul, because you want to help your countryman and, at the same time, if you say so-and-so is a scoundrel, and he will not pay, or a certain official is corrupt, you will, perhaps, get into difficulty.

Mr E. F. Law.

14 Feb. 1890.

28,661. (*Mr. Lawson.*) I understand that you think it is a gain, and not a loss, to the English commercial community, that our consuls do not tout for particular firms and particular orders?—Distinctly a gain.

28,662. (*Chairman.*) Unless there is anything you would still like to say, I do not think we need keep you any longer?—Thank you, I have nothing further to say.

The witness withdrew.

Mr. William Edward Davidson called and examined.

Mr. W. E. Davidson.

28,663. (*Chairman.*) I believe you hold the position of legal adviser to the Foreign Office?—Yes.

28,664. An appointment which was in its present form created, or at all events established, only two or three years ago?—In July 1886. I do not know that the matter is very important, but perhaps I ought to say that the recommendation of the joint departmental committee, in consequence of whose report I was appointed, was that a "Counsel to the Foreign Office" should be appointed, and in the minute appointing me I am so described. I have since been generally called "Legal Assistant," but the latter term is somewhat of a misnomer. The duties I perform are those of permanent Legal Adviser or counsel to the Foreign Office. The Law Officers of course also very frequently advise the Secretary of State, but they do so, not as the Law Advisers of the Foreign Office but of the Crown, and of the Ministry for the time being.

28,665. (*Mr. Lawson.*) I think you appear as legal assistant in the estimates?—Yes, I appear as legal assistant in the estimates, but, as I have said, the actual appointment is that of "counsel to the Foreign Office."

28,666. (*Chairman.*) Is the relation you hold to the Foreign Office and your position there a consequence of the recommendation of a committee which sat about that time?—Yes.

28,667. Which sat in that year, in fact?—Yes.

28,668. The subject has been mentioned, I think, by Mr. Bryce himself, who has given evidence before the Commission, and that has led us to ask you to come here to say whether you have anything to suggest with reference to your position in the Foreign Office. We should be glad, therefore, to hear any suggestions that you can make. When there is a legal question at the Foreign Office, are you asked to draw up a case for submission to the Law Officers, to take as an instance such a case as that?—The great majority of the legal questions at the Foreign Office are settled without any reference to the Law Officers, but when matters are referred to them I invariably either draw the reference myself, or I settle the reference. I am entirely responsible for the whole of the legal matters. Of course, in many cases there is a great deal of fact which is supplied to me by the various officers in the departments. I look through it and settle it carefully, and I always absolutely settle legal questions which arise on those facts which are to be submitted, and I add any observations on the legal bearings of the case, and quote any precedents which I think may assist the Law Officers.

28,669. Do the papers, as a rule, come to you in a prepared form, so to speak, like a case stated for your decision?—No.

28,670. Do all the papers relating to a particular affair come to you?—Nothing comes to me except it is referred to me either by the Secretary of State, by the permanent or Parliamentary Under Secretary, or by one of the two assistant under secretaries. They refer to me papers very frequently; my name is usually simply written upon them—I read these papers and make what observations I think right from a legal point of view. I do that in a great number of cases which are never submitted to the Law Officers at all. I should say at least four-fifths, and probably many more, of the cases I advise on do not go to the Law Officers at all.

28,671. I did not make myself clear. There are, I presume, some further cases that would, under ordinary circumstances, be submitted which are of very grave importance, and which, I presume, would go to the responsible legal advisers of the Crown?—Yes, certainly.

28,672. And those papers would pass through your hands on their way?—Yes, always.

28,673. And you would see that the case was stated properly?—Yes. I should either settle the case in the way I mentioned, or else I should draw a case myself, if it was a case which chiefly involved legal matters and not fact.

28,674. Would it rest with you to decide whether a question sent on to the legal advisers of the Crown was a case to be stated by yourself on behalf of the Foreign Office, or would that be a matter for the discretion of the Secretary of State?—Clearly for the Secretary of State, but I think in a case in which I said I thought the opinion of the Law Officers ought to be taken, he would probably confirm that. On the other hand, if any matter arose in which the Secretary of State himself desired that the opinion of the Law Officers should be taken, the papers would be sent to me, and it would be my duty to see that the reference was properly drawn, and the necessary legal considerations submitted.

28,675. Is there a great deal of work in your department?—Yes; I think there is a good deal. Perhaps it would be convenient for me to state the number of these references to the Law Officers for instance. I do not know whether that would help the Commission?

28,676. I wanted to know generally—I think we have had it in evidence—whether there is a great deal of heavy work to do in your department?—Yes, there is a great deal of heavy work, but I have no department.

28,677. And a great deal of it is responsible work?—I think so.

28,678. Of course yours is a newly-created department, and we are anxious to learn from you, as we are considering the constitution of the Foreign Office, whether things are working as they ought to do. Have you any suggestions to make; it really comes to that?—There is no legal department in the Foreign Office, and never has been, but I think that the office I hold is much more responsible one since the departure of Sir Julian Pauncefote to America, because when he was at the Foreign Office he himself—the permanent head of the office—was a gentleman possessing large legal attainments. Now, with the exception of myself, there is no one who possesses even a legal qualification, so that I think the position, so far as relates to the responsibilities attaching to it and to the work, is considerably altered since Sir Philip Currie's promotion to take Sir Julian Pauncefote's place. Before that time there was, of course, another official in the office, of large legal attainments and experience, to whom one could go for assistance, and whose opinion one might take to assist one's own or to confirm one's own; and now nothing of the sort exists. There is no other legal official of any kind in the Foreign Office, either in a responsible or a subordinate position, besides myself. There was no legal official on the permanent staff of the Foreign Office previously to 1876, when a legal Assistant Under Secretary was appointed in accordance with the recommendation of the Committee on Legal Establish-

Mr. W. E. Davidson.

14 Feb. 1890.

ments in Government Offices, which sat in 1875 under the chairmanship of the late Sir George Jessel.

28,679. Have you any suggestions that you would like to make to the Commission about the relations of your department in any way?—I think, rather than make a suggestion, that I would like to call the attention of the Commission to the difference between the arrangements for the discharge of the legal duties in the Foreign Office and in other Secretaries of State's offices. I do not think that the arrangements in the Foreign Office are nearly so complete as they are, for instance, in the Colonial Office. In the Colonial Office there are two legal Assistant Under Secretaries of State, besides several clerks upon the establishment who have been called to the bar (in more than one case with the highest legal honours), and there is also a clerk for legal instruments. In the Home Office again, the Under Secretary of State himself is a lawyer of great experience, and there is a legal Assistant Under Secretary of State, who is also a barrister of experience. In the India Office there is a complete legal and judicial department, besides a legal adviser to the Secretary of State. In the Foreign Office, at present, there is absolutely no one except myself.

28,680. Do you find that you are really practically overwhelmed with the work that comes to you?—I think it undoubtedly would be so in any time of stress. I cannot say that I am physically overwhelmed now. I have certainly much more to do than I can get through satisfactorily to myself, and it must be remembered that during the last three years things have been most extraordinarily quiet. I am convinced, if such a misfortune should occur as the outbreak of a European war, or any unusual excitement arose, the mere work of drafting the cases for the Law Officers would be as much as I should be able to do satisfactorily. I have never been free from arrears during all the time I have been at the Foreign Office. There has either been a larger or a smaller mass, but the mass has always been there, sometimes of many boxes, sometimes of few.

28,681. Apart from when Sir Julian Pauncefote was there, I understand that he was an under secretary, with legal acquirements?—Yes.

28,682. There was an officer representing your department, was there not, also?—Not before I was appointed.

28,683. You mean that you succeeded nobody?—I succeeded nobody, mine was a new office, so far as the Foreign Office is concerned. In one sense it succeeded, in relation to the Law Officers, the counsel who was appointed to assist the Attorney-General in Foreign Office matters, because upon my appointment his services ceased with the consent of the Law Officers. My office was created in 1886, as I understand, to supplement the office which already existed, which was that of a legal Assistant Under Secretary of State.

28,684. Then you are a legal assistant under secretary, only under a different name?—No.

28,685. You are the legal adviser?—I think I do in the Foreign Office now practically what legal Assistant Under Secretaries of State do elsewhere; but I am by no means a legal Assistant Under Secretary of State myself, either in the position, or rank, or authority, or pay.

28,686. (*Mr. Lawson.*) But so far as pay is concerned, I suppose as it is a fixed salary, you thoroughly understood that when you went in, did you not? It is a fixed salary, is it not?—Yes. When I accepted the post of Counsel to the Foreign Office, the position of things in the office was very different. I knew that Sir Julian Pauncefote was there, and I knew, or considered, that he represented a legal Assistant Under Secretary of State, because, when he was promoted, he became permanent Under Secretary from the legal Assistant Under Secretaryship of State, as I understood, he undertook to continue to discharge the legal duties which he had hitherto discharged while legal Assistant Under Secretary, and, in consideration of that, a political assistant under secretary was allowed to be appointed by the Treasury to the Assistant Under Secretaryship which Sir J. Pauncefote vacated on his promotion in 1882. So that I believed at the time I took the appointment, that there would always be two legal officials in the office, and that when Sir Julian Pauncefote, either by promotion or otherwise, left, then either his successor, or one of the two Assistant Under Secretaries of State would necessarily have to be a gentleman possessing legal qualifications.

28,687. (*Mr. Harvey.*) I suppose you have not found your work so urgent that you made any representations for assistance, or anything of that sort?—I have many times discussed with Sir Julian Pauncefote the work, and also with Sir Philip Currie, and said that I thought it was very heavy in itself, and that I did not consider the arrangements for its discharge so satisfactory as they are in other offices. I am not myself responsible, of course, for the actual arrangements made for the discharge of the legal work at the Foreign Office, though I am most anxious to do the best I can with the means placed at my disposal so long as I may be there. I have not made any formal representation, and I have never been asked to do so.

28,688. (*Mr. Lawson.*) How many hours a day, on an average, does your work take you?—I have not kept an account lately, but I did at one time for several months continuously. My time of actual attendance at the office itself then averaged six and a half hours a day (Saturdays, which are not half-days at the Foreign Office, being included). In addition to my attendance at the office, I very often have boxes sent home and work out of hours, which are, at the Foreign Office, from twelve to six. I do not consider that I am in any way bound to do so, but I do, as a matter of fact. I am anxious to get through the work as well as I can.

28,689. (*Mr. Cleghorn.*) Have you no chief clerk or assistant?—I have no one at all.

28,690. No one?—No one. I ought to explain that such assistance of a non-legal kind as can be given to me is always most ably and heartily given to me by my colleagues in the office, and I am greatly indebted to them all for it, but of legal assistance I have none at all.

28,691. I mean you have no one on whom you actually depend, or to whom you look for permanent constant assistance?—No. For instance, if I were to be ill, there is nobody who could take my place. I have hitherto fortunately never been away a day from illness since I joined the office.

28,692. (*Mr. Harvey.*) I imagine that the difference between a legal assistant under secretary and a legal adviser would be, that the legal assistant under secretary would decide a legal point?—No, I think not.

28,693. You, I take it, would not decide a legal point, would you?—Yes; I should send in my report to the under secretary who sent the papers to me, and I think, in most cases, unless I said I thought it was a very important point, and that the Law Officers' opinion ought to be taken, it would be considered to be decided.

28,694. A minute would come to you, would it not, from any part of the Foreign Office, and you would send your recommendation or your advice back to the quarter from whence it reached you, and then the decision would go out as the decision of the Secretary of State?—Certainly; so it would if the Law Officers had advised upon the question; it would be the decision of the Secretary of State, given after considering their opinion. The Secretary of State is not bound to act upon the opinion of the Law Officers, that is a matter for his discretion.

28,695–6. Then what is the exact difference between the work that you do and the work that was formerly done by the legal assistant under secretary, or that is done in the Colonial Office by a legal assistant under secretary?—I do not think there is practically any difference between the legal work that is done by me and by a legal assistant under secretary. I say *legal* work, because I believe that in practice, legal assistant under secretaries do frequently, for the convenience of the office to which they are attached, do other work than strictly legal work. I know that Sir Julian Pauncefote did so at the Foreign Office while he was legal Assistant Under Secretary to a considerable extent, though the bulk of his work was legal. The legal work at the Foreign Office, however, has greatly increased of late years. This was pointed out by the then Secretary of State in 1886, and formed, I believe, the principal ground upon which the Committee based their recommendation that the post of counsel should be created.

28,697. What was the origin of your appointment; was there any committee?—Yes, there was a joint departmental committee, which was appointed, I believe, early in 1886 to inquire generally into the state of the Foreign Office, but I think it only reported upon the legal business of the office.

28,698. Then you consider that the position which was contemplated for you by the Committee of 1886 remained unaffected whilst Sir Julian Pauncefote was there?—Yes.

28,699. But you think it has altered since he left?—I think so. Of course I cannot say what the committee had in their minds. I may have gone to the Foreign Office with a wrong impression, but that is my impression. I think that the committee always contemplated that there should be somebody in a position either of the permanent Under Secretary of State, or of an assistant under secretary, who had legal knowledge.

28,700. You do not sign a letter for the under secretary, do you?—No.

28,701. You do not discharge the duties of an assistant under secretary in any way?—No, in no way whatever. I have no means of communicating officially with anybody, of my own motion.

28,702. Would not the difference be that the legal assistant under secretary, such as there is in the Colonial Office, might himself make a decision and communicate it to whomsoever it concerned under his own signature, but that you could not do it. You would have to report to some secretary or assistant under secretary, and on his agreement with your decision would depend whether the opinion would be accepted?—Undoubtedly, if the under secretary chose to disregard the opinion and not to act upon it, he could do so. He could not, of course, alter the opinion. I should be responsible for my advice, and he would be responsible for the decision he took upon it. I cannot, however, recall any case in which an Under Secretary has not accepted my opinion on a legal point.

28,703. Would you agree that that is the distinction between a legal adviser and an assistant legal under secretary?—I think that is one of the distinctions; it would be the same I think, in a non-secretary of state's office (such, for instance, as the Local Government Board) with regard to an assistant legal secretary and a legal adviser.

28,704. (*Mr. Lawson.*) I suppose that you would consider that the legal points upon which you have to advise, and to some extent to decide, are at least equal in importance with those that are sent up at the Colonial and India Offices?—I cannot say about the India Office, because I must explain that that is on a different footing, but so far as the Colonial Office is concerned, undoubtedly. I worked a good many years in the Law Officers' chambers and I had opportunities of seeing the sort of questions that were submitted by each office. The references from the Foreign Office were certainly both more difficult and far more numerous. For instance, in 1884 there were 112 references from the Foreign Office and 23 from the Colonial Office; and in 1885 there were 159 from the Foreign Office and 18 from the Colonial Office. The Commission are probably aware that the Foreign and Colonial Offices alone submit their references direct to the Law Officers in the form of a letter. All other offices do so by means of a case which reaches the Law Officers through the solicitor to the particular office (if there be one) or else through the Treasury solicitor.

28,705. Do we understand from you that you want additional assistance in your own room?—I think that if a time of great stress arise it will undoubtedly be necessary for the proper discharge of the legal duties of the office that there should be a second barrister, whether he is called a legal assistant, under secretary, or whatever he may be called, who shall be able himself to do work of the kind that I now do.

28,706. (*Mr. Cleghorn.*) Would you give us a general idea of the nature of the cases that are referred to you?—It is rather difficult; almost every kind of legal case comes to me.

28,707. Give us a sample of one or two short ones?—First, every claim for injury, either to his person or to his property, which is advanced by a British subject abroad, to the Foreign Office, would at some stage or other, probably at a very early stage, come before me to advise upon its legal aspect.

28,708. Claim upon whom?—Upon a foreign government for injury to his person or his property in a foreign state. Supposing, for instance, that a British subject were improperly arrested, or treated with great violence by the police of a foreign state, he would represent that case to the Foreign Office, and the Foreign Office would investigate it, and if necessary make a representation on behalf of the British subject to the Foreign Government.

28,709. Would he not go to his own ambassador or minister?—If he did it would come to the Foreign Office, because it would be reported by the ambassador or minister to the Foreign Office, and he would ask for instructions as to dealing with it.

28,710. He would not deal with it without instructions from the Foreign Office, would he?—I think not, as a rule. Of course, that would be within his discretion if the matter were a very urgent one; but, as a rule, he would report it, undoubtedly, before making a representation, and ask for instructions. Then as to cases involving injury to the property of British subjects, there are the very numerous cases in which British subjects complain that they have been unjustly treated in respect of their ships in foreign ports, their goods, their commercial undertakings and contracts abroad. Again, there are many and most important cases in which British subjects complain that concessions granted to them by Foreign Governments have been violated.

28,711. Would such cases come to you?—Such cases, I think I might say, would almost all come to me, and it would be my duty to report upon them; and very frequently at a later stage they would have to be referred to the Law Officers, in which case it would be my duty to draw or to settle the reference which was made to them, and also to revise any drafts of letters that might be written either to the subject himself or to the ambassador in connexion with the case. I think I have not mentioned before that it is my duty to revise *all* drafts of letters founded on my minutes or opinions before these letters are submitted to the Secretary of State. Then any question of extradition or naturalization which arose would probably be submitted to me at some time or another, if there were any legal difficulty about it, or if it did not follow established precedents. Orders in Council putting into force the provisions of the Foreign Jurisdiction Act abroad would pass through my hands, though they would not actually be drafted by me. Again, questions as to the construction of treaties are referred to me frequently. I have to advise constantly on questions of domicil and status; as to the marriages of British subjects abroad; upon conflicts of jurisdiction, or of laws, between this country and foreign states; upon complaints as to the administration of justice in British consular courts; upon petitions for mitigation of sentences passed by them; upon all cases in which Her Majesty's diplomatic or consular representatives abroad apply for instructions on legal matters and so forth. In fact, the cases which come to me range over the whole of public and private international law, and involve also a knowledge of common law, and statute and criminal law.

28,712. Every day, I suppose?—I should say on the average throughout the year that many cases are referred to me daily; it is difficult to say how many cases a day, sometimes there might be half-a-dozen fresh cases and sometimes more, and sometimes two, and perhaps on another day one.

28,713. It varies?—Yes; in the course of a year a very great number of cases of different kinds arise. I have not had time to prepare myself with any statistics as to the exact number, and I should not like to commit myself to more than the general statement, therefore, that the cases referred to me are very numerous, very varied in character, and frequently involve questions of considerable difficulty and importance, upon which it is necessary to advise with the least possible delay.

28,714. (*Chairman.*) If there is anything that you would like to add I should be glad to give you the fullest opportunity of stating it?—I do not think there is at the moment, but if there should be any question upon which any of the members of the Commission think I may be able to give them further information usefully, I should be glad to supplement my evidence upon such points. I had no idea until late last night, when I received their request to attend before them to-day, that the Commission would desire to examine me at all, and I have, therefore, had no time to prepare myself thoroughly as I should have liked to have done.

The witness withdrew.

Adjourned.

EIGHTY-FOURTH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, February 27th, 1890.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN, K.C.B.
Mr. J. CLEGHORN.
Mr. A. S. HARVEY.
Mr. R. W. HANBURY, M.P.
Mr. H. L. W. LAWSON, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Sir PHILIP W. CURRIE, K.C.B., recalled and further examined.

Sir P. W. Currie, K.C.B.
27 Feb. 1890.

28,715. (*Chairman.*) There are a few points upon which we wish to have further evidence from you, partly in connection with the questions upon which you have already given evidence, and partly also with reference to the returns which you have handed to the Commission upon the cost of the diplomatic establishments, and so forth. The first point I should like to ask you upon is the fusion of the diplomatic and the Foreign Office services. Do you think that that could be carried to a further extent than it is at present?—I think it might be carried somewhat further, but there would be difficulties. The services might be fused, with certain restrictions, but I think you could hardly force men who have entered the Foreign Office as a profession to go abroad; and, on the other hand, it would be hardly fair to force men who have entered the diplomatic service to remain at home permanently.

28,716. Quite so, as regards the present occupants of those offices, but what do you say as regards the future?—The difficulty as to the future would be, that to live abroad, a man must have some considerable means. To be a clerk in the Foreign Office, particularly if his family live in London, he need have really none except his pay. That is the difficulty, but I think that the services might be made one, on the understanding that some men would be specially told off for the home service and some for the foreign service; if that was left to the discretion of the Secretary of State, I think there would be no objection to it.

28,717. Would there be any advantage in it, do you think?—Yes, to some extent there would. Of course, it is very important that the men in the Foreign Office should have experience abroad; and it is also very important that the men abroad should have experience at home. That does prevail now to a very considerable extent, but if you fuse the two services, it would, no doubt, lead to an extension of that practice.

28,718. Then I understand you to be of opinion that there might be a fusion, subject to the understanding you mention, that in the discretion of the Secretary of State the young men might be set apart for one service or the other according as circumstances absolutely required?—I think so.

28,719. That would not be an absolutely complete fusion, would it?—No, it would not. I do not think it would do to say that every man who enters the service shall serve an equal time or an equal proportion of time at home and abroad, because it would then debar us from taking any men who have no private means.

28,720. (*Mr. Hanbury.*) Would it do to say the man was liable to serve either at home or abroad, at the wish of the Secretary of State?—I think so; I think there would be no objection to that.

28,721. (*Chairman.*) One question upon the three kinds of clerks which you have in the Foreign Office. I gathered that the gist of your former evidence was practically this: that to a considerable extent, and especially in the place of the supplementary clerks, there might be a greater employment of the lower or second division clerks, that you did not think it necessary throughout the whole Foreign Office to keep up the present three classes, namely, the political or diplomatic class, the supplementary class, and the lower division class?—That is so. I think the supplementary clerks cannot be abolished altogether. They must be kept to exercise a supervision over the lower division clerks, but there is no reason why lower division clerks who show themselves fit for it should not be promoted, in some cases, to be supplementary clerks.

28,722. Do you think they could be employed at all in any of the political departments of the Foreign Office?—No, I do not think we can employ them in the political departments.

28,723. Do you think that there is no work of a routine or simple character in those departments which they could perform?—I think if we took all the routine work out of the hands of the clerks in the political departments, we should not leave enough work to employ them in ordinary times. We are obliged to keep up rather a large staff in those departments on account of the very great and sudden increase of work which we have occasionally; if you were to say that no man in the political departments is to do copying, there would be times perhaps when he would not have enough to do. Of course they are very hard pressed when there is a great deal to do.

28,724. Is there any work abroad in any of the diplomatic establishments of a simple character which might be done under a pressure of work by some of the lower division clerks who are in the Foreign Office?—I think not. I think the same remark would apply, namely, that it would be merely reducing the secretaries and attachés to a state of idleness in many cases when there did not happen to be much pressure of work. As it is now in some of the embassies and legations, they have a man who is called a chancelier, at least, he goes by that name abroad; we call him a translator and vice-consul. He works in the chancery, and I think the result has generally been that a great deal of the work falls into his hands. For myself, I think it is desirable that all the work should be done by the secretaries and attachés. Of course, a good deal of it is routine work, and a good deal of it is not routine.

28,725. Would you be of opinion that this particular office which answers to the chancelier in the foreign diplomatic establishments might very fairly be done away with, and that it is desirable not to have such an officer at all?—I think in some places it is necessary on account of the language. It is generally combined with the office of vice-consul, where it exists. In some places there is a good deal of consular work to be done, and then it is naturally done by this man, and it is at the option of the head of the mission—the ambassador or minister—whether he works in the chancery or not.

28,726. Do you know in what number of places there are officers answering to that description?—In Paris there is a consul and archivist; he keeps the register of the embassy. At Madrid the consul, I think, takes a certain part in the business of the embassy, but I could not answer your question further offhand.

28,727. Speaking generally, and as a principle, I understand you to be of opinion that it would be desirable that, where possible, these places should be done away with, and that all that work should be done by the staff of the embassy?—I think it is desirable that the work of the embassy should be done by the staff of the embassy. I think it is much better to keep people doing routine work than doing nothing at all.

28,728. Now with reference to the entrance examination for the Foreign Office, are you of opinion that the present examination for entrance to the Foreign Office is a satisfactory one, or have you any suggestions to make whereby you think that examination might be made a better test of whether the candidate has abilities suitable for the work of the Foreign Office?—I think that the examination on the whole has produced very satisfactory results, but we have recently suggested to the Civil Service Commissioners some changes in it, which I believe they will adopt. One is to raise the marks for French and German.

28,729. (*Mr. Lawson.*) Do you mean the proportion of marks?—Yes, from 500 and 300 respectively to 600 each.

28,730. Out of the same total?—No, the total will be increased. Other changes that we have suggested are that additional marks should be given for geography, the history of Europe, constitutional history, and Italian and Spanish; and we have also suggested that the history of Europe should be fixed to the period from 1789 to 1860.

28,731. (*Chairman.*) Has there been any extra importance attached to a conversational or colloquial knowledge of foreign languages?—Yes.

28,732. Then with reference to the consular appointments, have you suggestions to make in any direction which might improve the consular service, say, by giving more promotion within it or more hope of reward for good and active service?—I have had a paper drawn up upon that. I understood that there was some little discrepancy apparently in the evidence which was given with regard to the consular service. Sir Percy Anderson stated, I believe, that it was not graded at all, and the Commission appear to have understood that to mean that there was no system of promotion. What I believe Sir Percy Anderson meant was that consulships are not set down as belonging to the first class, but that when a man gets a consulship the appointment stands by itself, and does not necessarily lead up to another post of higher standing. That is a correct statement; but it should not be inferred from it that promotions do not take place. This paper which I have had drawn up, and which I will put in, contains particulars of all the consuls with salaries up to 500*l.* or above 500*l.* It consists of 94 names. Of these, eight still hold the posts to which they were originally appointed, two of the number being vice-consuls, the remainder have either entered the service as vice-consuls or clerks, or have been given promotion from one consulate or another; there are only eight out of 94 who have not been promoted or transferred. As a matter of fact, although it may be said that the consuls are paid more according to the requirements and the expensiveness of the place than on any other system, there is great ambition on the part of the consuls to go from the less well paid posts to the better paid posts; their applications for promotion are considered and, in the majority of cases, are favourably entertained. For instance, I may take the case of the Consul-General at Antwerp. He began by being vice-consul in Nicaragua; he was then successively consul at Cayenne, Pará, Rio Grande do Sul, Stockholm, Réunion and Cadiz; then he became Consul-General at Odessa, which is one of the best posts in the service. He entered the service in 1858.

28,733. (*Mr. Hanbury.*) Is there any limit of time during which they could stop at a particular consulate as there is in the diplomatic service in which there is a rule limiting the time, I think, about five years?—There is no such rule as regards consuls. In some cases a man remains a great many years at his post; some men do not wish to leave their posts, and, as a rule, we should not force a change upon them.

28,734. (*Chairman.*) A suggestion was made to us that the consulates might be grouped rather more than they are, and that within that group the more important places should be the prizes for successful work. It was stated that the conditions of the consular service were such that the consul who did good work, say in the East, would not be at all fitted for work in another part of the world, and it was therefore suggested that a larger and extended system of grouping the countries, which are of a similar character, such as the countries in the East, should be adopted?—I think that is the idea of applying to other parts of the world the system that exists in China, Japan, and Siam, and the Levant, of having consular assistants who would enter the service by open competition, and who would then be promoted to vice-consulates and consulates.

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

28,735. Yes, with some exceptions that is so?—I think the system might be tried; for instance, in Spanish-speaking countries we might, perhaps, have a system of that kind, but I do not think it would do to take away from the Secretary of State, altogether, the right of appointing men directly to consulates, without having passed through the training as assistants.

28,736. I was referring, not so much to the position of the consul himself, as to the efficient discharge of his duties, and I was looking at it from the point of view that he should always be engaged on the kind of work of which he had knowledge. The instance you have given, of grouping the Spanish-speaking countries, is a case in point. A complaint was made by one of the witnesses that in some cases the consuls, although there is not much shifting, even now might be removed from a place where they had become conversant with the habits of the district to another place where they were not specially conversant with the local habits?—As a rule we try to keep a man to the same kind of posts, and, for instance, in the case of a man who has been at a Spanish post, to move him only to other posts where Spanish is spoken. But this difficulty comes in, that a man may press very much indeed to go to some other place where he gets a higher salary. He, perhaps, complains that he has been a long time in South America, and that his health will not stand the climate—that is a very common thing—and he presses very strongly to be sent somewhere else. If we could we should send him to Spain, but if there is no vacancy in Spain, he may, perhaps, be moved to Germany, or to some other part of Europe.

28,737. (*Mr. Hanbury.*) Take a man like Mr. Giffard Palgrave, who had such a wonderful knowledge of the East. He was moved from there to a place of which he had not an intimate knowledge—to America, I think?—He was moved, first to Siam, and eventually to Monte Video.

28,738. Would his knowledge of the East be of much use in Monte Video?—Sometimes a man may have a knowledge of the East, but it may not be desirable to employ him in the East.

28,739. (*Chairman.*) Just go back to the method of appointment, about which I rather interrupted you, I am afraid. Do you think that the system might be adopted of appointing more young men by open competition to the consular service?—There is the difficulty of expense. I think it was pointed out by one of the witnesses that the expense would be very considerable. Our consular service in the Levant, and our consular service in China are, of course, a good deal more costly than the consular service in the other parts of the world; but I think if that difficulty of expense could be got over, the system might be adopted. I own, personally, I am rather in favour of it; I think it would be rather desirable to have, at any rate, a certain number of men in the consular service who had been trained thoroughly to it from their youth.

28,740. And they would be men entering somewhat upon a different examination from those who enter the diplomatic service. I presume in the examination rather more attention would be paid to questions of trade?—I should select them by open competition, as we do in the China and Levant services.

28,741. Do you think also that there might be some system of personal allowances or distinctions of some sort which might be available for rewarding good service amongst consuls?—Yes, I think that would be very desirable. Sometime ago we equalised the salaries of the consulates in China. They were not all on one level; we put them into three grades. Then, there being a number of consuls with equal service, it was thought desirable that some men who had great claims from long service should get a little more. At the same time, it must be remembered, that if you make the salary higher at certain posts, there is a great difficulty in shifting them about. Therefore, I thought it was advisable that, keeping the salary the same, we should have the right to give the men who had most claim some personal allowance. The Treasury agreed to some personal allowances which we proposed, but they would not agree to our having those personal allowances to give at our discretion, that is, that when one man retired from the service, or was removed to a higher post, and his personal allowance

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

fell in, that we should have the power of allotting it to any man who we thought had a strong claim. They insisted that we must obtain sanction in each case. My view is, that in order to make the arrangements you suggest of much value, it ought to be left to the discretion of the Secretary of State how these good service allowances should be allotted, although the total number of them should be fixed. You might have three or four of them, or more, as the case might be.

28,742. Have you any suggestion to make as to the limit of age for the introduction of consuls into the service?—I do not think it would be desirable, as long as the present system of appointment is maintained, to reduce the limit of age, because you have to meet the case of a man having special qualifications. Take, for instance, such a man as the Consul-General at Zanzibar, who was appointed the other day, from the Indian service. It would have been very inconvenient, I think, in that case, to have had a lower limit of age. It is not often that the higher limit of age is approached. As I show by the paper to which I have referred and which I am going to put in, a very large majority of the men in the service have been appointed, when they were young, to small posts, and have gradually risen. The paper will show exactly how the system works. With the permission of the Commission, I will read another as an example. Take the case of the consul at Dantzig: he receives 600*l.* a year. He entered the service in 1870 as an unpaid officer at Port-au-Prince; then he became acting consul; then he was acting consul-general in charge of the legation there; then he became consul. Then he was moved to Königsberg, and now he has been moved to Dantzig. He, no doubt, has gone from a Spanish-speaking country to a German one.

28,743. Still, presumably, he was fit for it, or you would not have made such a change in his case?—I have no doubt that he knows German.

28,744. Would you be in favour of the appointment of more consuls-general, or of more commercial attachés?—I think it would be very desirable to have more if the Treasury were prepared to sanction the expense, which is high. I see that a suggestion has been made by Mr. Law which I think is worth trying; that is, that an allowance should be given in each of the embassies and principal missions to one of the secretaries, in order that he should give special attention to commercial questions. That seems a good suggestion, and I think we might in time, perhaps, get some of those men to qualify themselves to do the work of commercial attachés; that would be less expensive than specially appointing commercial attachés.

28,745. (*Mr. Lawson.*) Mr. Law said, I think, provided the secretary had the commercial knowledge?—I would not give him the allowance until he had acquired a certain amount of commercial knowledge. I agree in Mr. Law's view, that a candidate for the allowance should work for six months, or twelve months, in the commercial department of the Foreign Office; and then he might go to some consulate if he was willing to do so. But I cannot say until we try the system, how it would work, or whether the men in the diplomatic service would take to it; I have no doubt some of them would.

28,746. (*Chairman.*) Now let me ask you a question or two on the operation of the Diplomatic Pensions Act. It is very considerably different, is it not, from the ordinary Superannuation Act, under which the Civil Service pensions have been given. I believe the pension may begin after 15 years' service from the date of the commission, and after 10 years' actual service abroad?—Ten years' actual service, exclusive of the time they may be absent on leave.

28,747. That entitles a man, according to whether he has been in the first, the second, the third, or the fourth class, to a pension, the maximum of which is fixed in the first class at 1,700*l.*, the second 1,300*l.*, the third 900*l.*, and the fourth at 700*l.*; have you any suggestions to make about that?—I can only say that the present scale of pensions was recommended by a committee which sat in 1827. At that time the diplomatic pensions amounted in the whole to 57,000*l.* a year, and the salary list amounted to 140,000*l.* a year. The committee decided that that was too large a sum to give in pensions, and they reduced them to a maximum of 40,000*l.*, and they fixed, practically, the present scale of pensions; therefore that scale has existed since 1828. The total of the diplomatic pensions at the present day is 25,950*l.*, and the salary list (which now includes second and third secretaries, dragomans, and other members of the service who were not formerly included) amounts to 180,000*l.*

28,748. That salary list of 180,000*l.* is composed of the salaries of those who will come upon the pension list?—Yes, who are on the diplomatic establishment.

28,749. It is a more liberal scale, is it not, than prevails in the Civil Service generally?—Yes. As to the question why an ambassador should receive such a large pension as 1,700*l.* a year——

28,750. I would not pick the ambassadors out specially, but that is a larger pension, is it not, in proportion to salary than the ordinary Civil Service pension, and it is also earned at an earlier period?—I would point out that the Queen's representatives occupy a high position abroad, that they do not retire generally at an early age, and that when they have to break up their establishments abroad, and come and live in England, they are not quite in the same position as men who have served in an office in London, and who have been accustomed to a different scale of living.

28,751. (*Mr. Hanbury.*) But their establishments have been paid for them all this time?—They have been paid salaries, but they have not been paid at a rate which enables an ambassador to save anything. I think that that has been recognised by all the committees who have sat on the diplomatic service, that the salaries do not enable the members of the diplomatic service to save anything.

28,752. Do you know what pensions are paid by other nations? In the tables you have sent us we have not got that information; we have only got the salaries, I think?—I do not think we have put anything in to show that; I have not been asked for that.

28,753. Can you get that information?—Yes, I have no doubt I can. I may point out that the existing system has been established for a considerable time.

28,754. (*Chairman.*) Then I observe also, under section 8 of the Pension Act, that when any invalided secretaries are pensioned, the Treasury has the power of granting to them the advantage of receiving one-thirtieth part of the amount of the annual salary instead of one-sixtieth, as in the Civil Service?—I believe the reason of that is that, as a rule, they do not begin to qualify for their pension so soon as members of the Civil Service do. In the first place, the limit of age is 26: they do not enter so soon, and then they do not begin to qualify until they get their commission as third secretary, which is some time after.

26,755. (*Mr. Lawson.*) They do not enter until 26?—Twenty-six is the limit of age.

28,756. The limit of age, but not the average?—No; it is the topmost limit. There has been some correspondence going on between us and the Treasury with regard to the fourth class pensions of 700*l.* a year. Those pensions are practically for secretaries who have never been promoted to independent missions. Formerly that 700*l.* a year could only be earned after a long time of service. According to the Pension Act, a man must have a commission for 15 years, and formerly he did not get a secretary's commission until he became a first secretary, and for many years of his service he was a paid attaché without commission. That was changed in 1861, and a man now gets a commission as a third secretary very soon after his entry into the service. Consequently he may qualify for this 700*l.* a year pension, very much more quickly than he formerly did. There has been an objection made on that score, that a man who had only served just over the 15 years might claim a pension not exceeding 700*l.* a year. We quite admit that that was more than was contemplated; that matter has been discussed, but it is not yet settled.

28,757. (*Chairman.*) There is no pension earned, I think—no right to a pension given to any person in the diplomatic service until he has attained the rank of secretary?—The second or third secretaries may have pensions. They come under the eighth section: "Pension to invalided secretaries." The following clause applies to them—"Where a person holding a commission as second or third secretary in Her Majesty's diplomatic service" "is constrained from infirmity of mind or body to leave that service," "the Treasury may grant to him an allowance during his life not exceeding for each year of his service" "one-thirtieth part of the amount of the annual salary

"which he may be receiving at the time that he leaves "the service."

28,758. (*Mr. Cleghorn.*) He must have served five years abroad?—Yes, he must have served five years from the date of his commission.

28,759. (*Mr. Hanbury.*) Who certifies that he is invalided?—There is a medical certificate.

28,760. Any medical certificate, or a certificate from a Foreign Office doctor?—I think if he gets a medical certificate from one of the leading physicians, that would be accepted.

28,761. Would not it, as a matter of fact, be accepted from any medical man, as we find it was in the Civil Service generally?—I think if we had any doubts, we should require the man to go to some leading physician. I have known that done.

28,762. That case has arisen then?—There have been cases—I will not say amongst the diplomatic secretaries, because I cannot recall a case in which any man has retired under that section; but there have been cases in the consular service where we have made men go before a medical board.

28,763. (*Mr. Lawson.*) Have those cases been decided against the officer?—I can hardly say at the present moment, whether they have or not. I do not remember, but I know that that has been done in several cases.

28,764. (*Chairman.*) Generally speaking, I believe the consular pensions are the same as the Civil Service pensions, and that they do not follow the Diplomatic Act?—Yes.

28,765. Now let me ask you to look at the table showing the total cost of the diplomatic establishments for various countries, which you have been good enough to hand in. I see that the cost for Great Britain is 189,000*l.*; for France, 161,000*l.*; for Germany and Prussia, 145,000*l.*; and for Russia, 147,000*l.* There appears to be a considerable difference in the cost of the embassy in Paris, which is 15,600*l.*, whereas the German embassy in Paris is 9,000*l.*, and the Russian is 10,000*l.* That appears, at first sight, to be a very large difference, and some explanation is necessary why the British embassy should cost so much?—I think the explanation is, that we keep up a larger and no doubt a more highly paid staff. If you look at the particulars you will see that the ambassador at Paris receives 9,000*l.* a year. Then we have the secretary of the embassy with 1,000*l.* a year and an allowance of 200*l.* for rent. Then three second secretaries, 1,245*l.*; two third secretaries, 500*l.*; a commercial attaché who receives 1,300*l.* and 200*l.* allowance; and then a registrar who receives 650*l.* The post of registrar is held by a gentleman who is consul. He has been in the service a great many years, and I should imagine that it will not be necessary to continue that appointment when he retires.

28,766. (*Mr. Hanbury.*) Does he draw that amount as well as his pay as consul?—He draws some pay as consul—some small emolument. The 650*l.* is borne on the diplomatic vote. Then at the embassy at Paris there is a fuel and light allowance of 1,000*l.*, which is necessary because we have such a large and expensive house there. Then there is a commuted allowance, to cover divers expenses, of 500*l.* That makes a total under the head of salaries of 15,295*l.* The ambassador's salary was reduced not long ago from 10,000*l.* to 9,000*l.*

28,767. When Lord Lytton was appointed?—Just before he was appointed.

28,768. (*Chairman.*) Have you at the Foreign Office ever considered why it is necessary to keep so many secretaries at Paris. I think you yourself, speaking of it, used the words "a large staff"?—There is a great deal to do there, and then remember that our service, in consequence of the recommendations of various Commissions, has been made into a regular established service. It was recommended that the men should have commissions as second and third secretaries, and naturally in consequence their pay is high—higher than in other countries where I think they employ unpaid attachés a great deal—certainly they do in France.

28,769. (*Mr. Hanbury.*) Do you know when the last of these committees or Commissions sat?—In 1871.

28,770. (*Chairman.*) The greatest difference in the cost of our embassies, as compared with those of other countries, appears from this table to be at Paris?—Yes, I think it is. That is no doubt owing partly to our having a commercial attaché there. That gives an increase of 1,500*l.* a year. If you take off the commercial attaché, that would bring it down to about the level of the Russian embassy, I think.

28,771. Has there been any reduction in the cost of the embassy at Paris?—The salary of the ambassador has been recently reduced.

28,772. And that of the ambassador at Berlin, I think, was raised?—The salary of the ambassador at Berlin has been raised.

28,773. Our ambassador at Berlin gets 1,500*l.* a year less than the ambassador at Paris—is that not the case?—Yes, the ambassador at Berlin gets 7,500*l.*

28,774. Why should there be a difference between them?—It is not considered that Berlin is such an expensive place as Paris.

28,775. Then that difference would probably answer to the difference in the *Frais de Représentation* supplied by that country?—Yes; the salaries have been adjusted to meet the requirements of the different places, and of course we are giving lower salaries where the expense of living is not so great. The ambassador at Madrid, for instance, only gets 5,500*l.*, and no doubt the expense of living is very much less there.

28,776. Then, taking the salaries of the ambassadors, does this list represent what really ought to be the difference in the various capitals?—I should say that the ambassador in Paris ought to receive more than the others. I believe greater expenses are thrown upon him. The expense of living in Paris is very high.

28,777. (*Mr. Lawson.*) Not so much as in St. Petersburg, is it?—Yes, I think so. No doubt some things are more expensive at St. Petersburgh, but there is not the same wealth there.

28,778. (*Chairman.*) I observe that at St. Petersburg there is the same number of secretaries that there is at Paris, and that there is also a commercial attaché?—There are only two second secretaries at St. Petersburg; at Paris there are three.

28,779. There are nine on the staff?—Yes; there are three third secretaries at St. Petersburg, and there are only two at Paris. Then there is a commercial attaché and a translator.

28,780. (*Mr. Lawson.*) Of course these salaries depend to some extent upon the cost of entertaining and the necessity for it?—Yes, certainly upon the cost to which an ambassador is put in living. All the ambassadors represent to us that their expenses are very great. I am convinced that that is true, because I have been at an embassy. I was private secretary to Lord Kimberley when he was a minister at St. Petersburg, and I know that without being extravagant, he spent a good deal more than his salary.

28,781. Is not it the case that the expense of entertaining at St. Petersburg—I only speak about it from hearsay—is greater than at any other capital?—I should hardly say it was as great as at Paris. I believe that entertainments in Paris are on a more costly scale than anywhere else.

28,782. (*Chairman.*) To go back to this comparison of the embassy at Paris. The difficulty I feel is this. Take the case of the foreign embassies to Russia. If you look at the table you will see that the cost of our embassy is 12,000*l.* in round figures; the cost of the French embassy to Russia is 13,000*l.*, being absolutely more than ours. It cannot be said, I suppose, that French interests are more involved in Russia than ours are, or that French trade with Russia is more than ours. Therefore on those figures a comparison may be made favourable to this country. When, however, we come to the French embassy to Great Britain, we find that it costs something like 10,000*l.*, whereas our embassy at Paris costs 15,000*l.*, which is greater than the cost of any other embassy there. Some further explanation, therefore, appears to be necessary?—Where could the reduction be made? There is the salary of the ambassador, 9,000*l.* We certainly have always heard that the expense to which an ambassador is put in Paris is very great indeed. I think the feeling of all the ambassadors would be that Paris is the most expensive place. To begin with, we have got a very large, and of course very costly, house there.

28,783. (*Mr. Lawson.*) It is paid for?—It is paid for, but it is expensive to live in a very big house.

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

28,784. (*Mr. Hanbury.*) What do the Russians pay for their ambassador?—8,000*l.*

28,785-6. I want to know why our ambassador gets a higher salary than anybody else?—He formerly got a very much higher one——

28,787. Yes, but I am talking of the present moment?—And it has been reduced lately to 9,000*l.* I think it would be undesirable to reduce it any further.

28,788. Why should we pay more than other nations?—We pay, as a rule, higher salaries than other nations.

28,789. We do in the Home Service, I know, because it is said the expenses are so high, but in Paris the expenses for one nation are the same as for another?—My own opinion is that 9,000*l.* a year in Paris does not go any further than 7,500*l.* a year in Berlin.

28,790-1. I am comparing the salary of the English ambassador with that of the Russian ambassador and of the German ambassador in Paris; they are all three living in Paris, and have the same expense. (*Chairman.*) Following up Mr. Hanbury's question, the German ambassador gets 6.000*l.* a year, including his Frais de Représentation, and in both cases the house is free and kept up. We are not saying that the English salary is not right, but still the Commission would like to have some reason for it. (*Mr. Hanbury.*) Do you know whether in the Foreign Embassies, in the case of the German ambassador in Paris, for instance, the Frais de Représentation is supposed to cover all that the ambassador spends on hospitality, and whether, in his case, the 900*l.* salary is left absolutely untouched?—I think it is only a mode of fixing the salary. I do not think it is anything else; it is the way in which they choose to put it.

28,792. Is not it a fact that the whole cost of the German Embassy at Paris is only about 200*l.* more than the bare salary of our ambassador there?—It certainly appears to be so from this return. Of course it is impossible to say whether that return really represents the whole expenditure.

28,793. It does not include the pensions, we know?—Whether it represents all the expenditure on the embassy, I mean.

28,794. (*Mr. Lawson.*) I suppose the Russian diplomatic service is not supposed to be very parsimonious, yet I understand that it is exactly the same with the Russian Embassy in Paris, that is to say, that it is about 9,000*l.* altogether, and that the Russian and the German Embassies are nearly on an equality in that respect?—The Russian establishment is put down at 13,080*l.*

28,795. The Austrian is put down as 10,720*l.* on the comparative table?—You must remember that we keep at Paris a commercial attaché and a registrar. The latter is no doubt an expense that will be done away with as soon as the man retires. That deducts, for purposes of comparison, 1,500*l.* for the attaché and 600*l.* for the registrar, making 2,100*l.* That amount should be taken off in comparing the two embassies, but we, no doubt, keep a more highly paid staff.

28,796. The truth seems to be that a lot of the routine work is done in the German and Russian embassies by men of a lower rank than with us?—Probably it is.

28,797. (*Chairman.*) You have suggested that possibly the men in our service occupying posts answering to the chancelier in other services should be done away with, and that more work should be done by the attachés and secretaries, because there must necessarily be a time when they have not much to do?—I may point out that our present system of having a number of third secretaries and second secretaries was adopted on the recommendation of a Committee of the House of Commons. The former system was to have more attachés who were not commissioned officers as these are, and of course the change has added to the cost.

28,798. (*Mr. Lawson.*) What Committee?—The Committe of 1871.

28,799. Do you mean the House of Commons Committee?—Yes, the Diplomatic and Consular Committee.

28,800. (*Mr. Cleghorn.*) What was the reduction made in the ambassador's salary?—His salary was reduced by 1,000*l.*

28,801. He got 10,000*l.* before?—Yes

28,802-3. Do you happen to recollect how long it is since the last reduction?—The last reduction was made between Lord Lyons's departure and Lord Lytton's appointment.

28,804. That is very recent?—Quite recent. With regard to the rate of salary at Paris, I think that it is undesirable to put all the embassies down exactly to a dead level. Paris, no doubt, has always been looked upon as—I will not say the most important—but no doubt it is looked upon as the prize of the service, and for that reason I think it should be kept a little above the others. In addition to that I have no doubt that the expense incurred by an ambassador at Paris is considerably larger than anywhere else. I think anybody who has seen what entertainments are in Paris, what the general cost of living there is, and what an enormous number of wealthy people there are there, would see that it is a very expensive place. On a small scale I have no doubt you could live there cheaply, but the moment you try to live on a large scale the expense is enormous in Paris.

28,805. (*Mr. Hanbury.*) But then we do not have this dead level which you talk of with the embassies of other nations. The fact is that they start on a lower level, and do not reach such a high one as we do?—There is no doubt that our scale of pay is high, but, as I observed before, all pay in England is higher than in foreign countries. For instance, the clerks in the Foreign Office in Paris are not paid so much as the clerks here, and the judges in France are paid very much less than the judges are here.

28,806. Is not the answer to it, that that has been done because the cost of living in England is assumed to be higher. Here we have the ambassadors of several nations living in Paris, where the cost is and must be exactly the same?—It depends, no doubt, upon how much they entertain and what their style of living is.

28,807. (*Chairman.*) I think that the cost of chanceliers generally is higher and that they cost more than our third secretaries. In our case the two third secretaries cost 500*l.*, say 250*l.* a piece, but the German chancellors are one at 330*l.* and another at 310*l.*, and another at 285*l.*?—Then we have in Paris three second secretaries.

28,808. When we are talking of having so many secretaries, and comparing them with the chanceliers, the former seem to cost less than the others?—Yes.

28,809. (*Mr. Harvey.*) When the 9,000*l.* a year was fixed for the ambassadors at Paris, was there before the Committee a statement of the average expenditure of the ministers for a certain number of years? Why was the 9,000*l.* fixed?—9,000*l.* is a reduction from the previous salary of 10,000*l.*

28,810. Then were these reductions made on a sort of rule-of-thumb plan, or because it was thought possible that an officer could be obtained to perform the duties at the reduced salary?—They were made in order to enable additions to be made elsewhere. Considerable steps have been taken towards equalising the salaries at the embassies. Looking back a few years ago you will find that the salary at Berlin was considerably lower, but the expense of living has much increased there. Representations are frequently made by the ambassadors that they are obliged to spend a great deal of their private fortune, which some of them can ill afford.

28,811. (*Mr. Lawson.*) In those days it was only the Prussian Court which was at Berlin?—Yes, and it was not so expensive, no doubt. I think the ambassador received 6,000*l.* a year formerly.

28,812. (*Mr. Harvey.*) I think you prepared a scheme, did not you, for open competition for interpretorial and consular work in Turkey, the Levant, and Morocco?—I did.

28,813. On page 2 of your memorandum on the consular service, you give a list consisting of one vice-consul interpreter, then a certain number of consuls and other vice-consuls, then assistant vice-consuls, then four students in training. Do those represent the result of your scheme?—That is the result of the scheme after it has been 10 years in operation.

28,814. And are you satisfied with the working of that scheme?—Yes, very much so.

28,815. The criticism we have heard made upon it is that it is more costly, because of the necessity to provide a ladder of promotion for the various men who

enter; would you tell me how the promotion runs through that body of men?—In the first place, the students remain for two years at Ortakeui, in the neighbourhood of Constantinople, where a house and teachers are provided for them. They are lodged at the public expense, they receive 200*l.* a year to enable them to live, and their teachers are paid by Government. At the end of two years, if they pass the final examination, they become assistants and they are then sent to the consulates or to the embassy.

28,816. What salaries then?—They then receive 300*l.* a year.

28,817. And then?—Then as posts fall vacant they are promoted to vice-consulates, and when they have worked their way up through the vice-consulates they are promoted to be consuls or dragomans. You will observe one is vice-consul interpreter attached to the embassy at Constantinople. He does a great deal of dragoman business. There is another one attached to the consulate-general at Constantinople; there is another one attached to the legation at Teheran. Those men should eventually rise to be the chief dragomans, if they are sufficiently capable. Then two have been promoted to consulships, one at Suakin and one at Bengazi. There are then eight who are vice-consuls, and the remainder are still assistants, and of course they must wait for vacancies to get their promotion.

28,818. (*Mr. Lawson.*) These dragomans have been Levantines in the past, of course?—Formerly they were Levantines. The present system will replace them by natives of Great Britain or Ireland.

28,819. (*Mr. Harvey.*) Still you have insured that there is a perfect knowledge of the language?—Certainly.

28,820. And that men are sufficiently long in this group of countries to be thoroughly acquainted with all that appertains to their business?—Yes.

28,821. Now, do you see any trouble whatever in the further development of such a system as that?—The moment you apply this system to countries where the acquisition of the language is not nearly so difficult you would, perhaps, not have the same justification for the large expense that you go to. Unless a man has had a regular training he cannot acquire enough Turkish—at least only a very exceptional man could—or Arabic or Persian to enable him to dispense with the assistance of dragomans. Still more is this the case in China where you have the same system; but when you come to adopt this expensive system in Spain you see that there would not be the same ground for it, because, no doubt, any man who takes the trouble can learn Spanish very well in six months or a year. It is a very different thing from learning an Eastern language.

28,822. Then why should there be the necessity for this larger number of appointments, which constitutes the increased expense?—The object of instituting this service was to obtain men of British or Irish birth, who know the language. That is not the case in Spain or Germany, because, of course, there are plenty of Englishmen who know those languages.

28,823. Then to that extent would it not be all the more easy to apply the system of open competition in the way that you have in the Levant and Turkey, to the other European countries?—I should be very glad, personally, to see that applied if the expense was not thought an objection. Naturally, if you take these men, and to train them in the languages, you then would have to employ them as assistants at the various consulates; and each assistant would require about 300*l.* a year and lodgings—or a lodging allowance. Then having worked his way up to a vice-consulate, he would get about 400*l.* a year. Of course this adds very much to the expense of the service; there is no doubt about it. According to the present system you appoint a man consul; he probably appoints as unpaid vice-consul a merchant in the town, and a clerk whom he pays out of his office allowance; he pays that clerk much less than we should have to pay him; so that the system proposed would be more expensive.

28,824. Still we have no guarantee that under the present system the man who enters the consular service is at all fit for his post; the examination even is not compulsory?—The examination is compulsory, except in very special cases. The reason for enabling the Secretary of State to dispense with that examination is, that if a man who has distinguished himself in other ways, and who is no longer young, is appointed to a consulship, it would not be possible to make him go through an examination; but all men who enter under ordinary conditions go through the examination.

28,825. A simple test examination?—Yes, a simple test examination.

28,826. (*Mr. Hanbury.*) No part of that examination is in the language of the country to which they are sent, is it?—Not necessarily.

28,827. As a matter of fact, we have no guarantee whatever that any consul can speak the language of the country to which he is sent. (*Mr. Harvey.*) Is that so? I see that one condition is that they are expected to satisfy the Civil Service Commissioners, "that they "have a sufficient knowledge of the current language, "as far as commerce is concerned, of the port at which "they are appointed to reside, to enable them to com- "municate directly with the authorities and natives of "the place." (*Mr. Hanbury.*) I am not referring to port consuls, I am referring to consuls elsewhere?—They must know French.

28,828. (*Mr. Harvey.*) Do you consider that that test examination is really sufficient to provide the sort of men that we want for the consuls?—I think, as a fact, that the men whom we have as consuls are competent to perform their duties. I have heard very few complaints. Of course there are hard bargains in every profession, and I have no doubt we have got some consuls who are not satisfactory, but the majority of them are. We very seldom hear any complaints, and there is a good deal to be said for selecting a man who has seen something of the world in other capacities.

28,829. (*Mr. Hanbury.*) What means have you, when they have once been appointed, of knowing what they are doing, and how they are getting on. Do you have reports on them sent by anybody?—They are in constant communication with the Foreign Office; when they come home they come to the Foreign Office, they are seen, and can be judged from their reports; also they are under the superintendence of the minister or ambassador of the country in which they are.

28,830. Does he report upon them in any way?—He would certainly report if there was any complaint against them.

28,831. As a matter of fact, he does not make any formal annual report?—No, I do not think there is anything of that sort.

28,832. (*Mr. Harvey.*) Still, I understand you to be of opinion that it would be possible to extend the application of open competition to the consular service?—I think, to a limited extent, it might be done. Of course, such a scheme would require a great deal of careful working out before one could really pronounce an opinion upon it.

28,833. Yes, but the Secretary of State being always at liberty, in exceptional cases, to appoint exceptional men?—To appoint exceptional men.

28,834. (*Mr. Lawson.*) As he does now in the case of the diplomatic service, when he selects a commercial attaché like Mr. Law?—Yes.

28,835. (*Mr. Harvey.*) We have had a suggestion made to us that the whole of the consular service should be divided into groups, based upon similarity of language, and similarity, somewhat, of political conditions, and that promotion should take place only within that group, so that you should ensure that within that group all the consuls thoroughly understood everything connected with the business of that group. Would you favour such an idea as that?—I do not think it would be well to establish any hard and fast rule. As I said, considerations of health very often come in. A man has lived for some time in a hot country, he is very anxious to be moved to a colder place. As far as shipping goes, the duties of a man are very much the same in all European countries.

28,836. (*Mr. Lawson.*) With respect to the organisation of the diplomatic service, I understood you to say that the number of secretaries is due to the recommendation of the Committee of 1861, is it not?—Yes, 1861.

28,837. I find that the Committee of 1871 recommended that at each embassy and legation there should be a permanent officer having charge of the records acting as translator, and receiving a fixed salary for his services. That is the man, I understand, whom you recommend should be more or less abolished?—I was asked whether I thought it would be a good thing to employ lower division clerks. I presumed they

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

would hold that sort of appointment, and I said, no, because I consider that if you put all the routine work in the hands of a man like that, you would at times leave the regular members of the embassies without sufficient work.

28,838. Then if these regular members of the embassies have nothing to do, would it not seem the simpler way to decrease their number and to put in these chanceliers, or men of that class to do this routine work?—That practically would be altering your diplomatic service, and it is a large question to go into. If you are to have trained diplomatists you must have this ladder of third, second, and first secretaries.

28,839. I was not dreaming of that. All I was thinking of was whether in some places where there is all this routine work to be done, which might be put into the hands of a lower paid class of man, you could not reduce the number on the principle suggested by this committee. I mean to say that you might have everywhere a translator or chancelier?—If you will allow me, with reference to that point, I will read from a memorandum which Lord Granville wrote on the recommendation of that committee with regard to the question of a permanent officer: "Lord Granville is "not prepared to recommend to the Treasury to adopt "generally the suggestion that a permanent officer as "keeper of records and translator should be attached "to the embassies and larger missions. The appoint- "ment of keeper of records exists at Constantinople "and at Paris, where the archives are very voluminous; "but at other places it does not appear to Lord Gran- "ville necessary to incur the expense of such an "appointment. As a general rule the tendency of such "an appointment would be to take away from the junior "members an inducement to make themselves ac- "quainted with the correspondence, to relieve them from "the very useful employment of making references and "reports; and to release them from an incentive to "acquire proficiency in foreign languages, by render- "ing their services for the purposes of making "translations quite secondary. Lord Granville con- "siders that every inducement should be held out and "every obligation imposed on the junior members of "the diplomatic service to pay strict attention to these "points; though peculiar circumstances may, in some "cases, render the appointment of a translator to "missions necessary."

28,840. I understand that, so far as the acquisition of difficult languages is concerned, you offer an inducement in the shape of an allowance of 100*l.* for Arabic, Turkish, Japanese, and Chinese?—Yes.

28,841. Therefore it is only a matter really of correspondence. Then you do think we cannot in any way take advantage of the experience of other countries in this direction?—I do not think it is desirable. If your object is to reduce the numbers of the diplomatic service something perhaps might be done in that direction, but then it gives you, of course, a smaller number of men to choose from for your high posts, and in times of pressure you would find it difficult to man all your embassies; even now it is difficult.

28,842. But would it be so with an amalgamated service?—With an amalgamated service I think probably the result would be that the Foreign Office would be more largely manned than it is now, because there is always more or less a pressure of work there, and if the services were amalgamated it would probably absorb a great many of the men.

28,843. The men who are doing nothing abroad would be brought home?—Yes. I would not say "nothing," but comparatively little.

28,844. Doing very little?—Of course they have much less regular work than we have here.

28,845. Leaving the question of these foreign chanceliers, do not you think it would be an advantage to the Foreign Office if, when there is a great pressure of work, you could bring men home?—We can do so under the present system with their consent; and I think that it is desirable that that system should be extended.

28,846. (*Mr. Harvey.*) Would the power for you to bring those men from the diplomatic service, when you had a stress at the Foreign Office, be increased if the examination and the conditions of entry for the diplomatic service were assimilated to those of the Foreign Office?—Yes; if the services were amalgamated the facility no doubt would be greater. As it is now, we do not, as a rule, have any difficulties; there are generally men abroad who are anxious to come home for a time.

28,847. (*Mr. Lawson.*) I want to deal for one moment with the difficulty you see in abolishing what is really the property test for the diplomatic service; is not it a matter of practice that men are not appointed to places where a large standard of expenditure is always maintained, unless they feel themselves that they are capable of bearing it?—I think that all foreign service entails a certain amount of expense. There is no rule of property qualification laid down, but the practice is that the private secretary, when appointing a man, says it is considered that he should have 400*l.* a year; that is really what is done.

28,848. Yes, I am aware of that. What I meant was that in a service such as yours there is a good deal of understanding that does not take the form of an absolute rule; would there be any great difficulty in working an amalgamated service, knowing, as you do, the conditions of most of the men who are your colleagues and under you?—I think there are many men in the Foreign Office who could not afford to go abroad.

28,849. They would not be asked, or they would not accept?—No.

28,850. Then there would be no difficulty in that?—Of course it would be rather difficult if the men are all put exactly on the same footing to ticket them, "This "is a man who has got 400*l.* a year," and "This is a "man who has not."

28,851. Of course, but practically in the case of the more expensive posts in the diplomatic service which require more than that, you have to do it at the present time?—I think if the Commission saw fit to recommend that some extension should be made of the partial amalgamation that may be said now to exist, we might, perhaps, find some scheme by which the services might be made practically one, and at the same time provide that no man should be obliged to go abroad if his means did not allow him to do so.

28,852. Would not this be the result—I will take a place like Constantinople. Suppose at any one time, or for any period of time, there was but little to do there, and you had a good deal of business of another sort to do at the Foreign Office connected with another part of the world; you could bring home one of their men, and use him temporarily, and of course he could go back there in case of pressure?—That would certainly be an advantage. At times of pressure in the Foreign Office, we generally do have a good many men from abroad, but they come in at their own request; we should not compel any man. If this system that you suggest was carried out, we should have more control over them, and I think it would be a good thing.

28,853. At the present time, of course, the system is by exchange?—By exchange, and also by a man saying that it is an object to him to be in London for a year; he asks to be attached to the Foreign Office, and if he is a useful man, and we think he will work well, we generally say "yes."

28,854. How is he paid—at his present rate of salary?—It makes no difference, he keeps his second secretary's pay, or whatever it is.

28,855. You do not make any difference in that case, on account of the difference between the cost of living at home and abroad?—No.

28,856. In regard to the question of diplomatic pensions, I understood you to say, that, as a matter of fact, you had not had any case in the fourth class in the diplomatic service where you could recollect an application with a medical certificate for ill-health?—I remember that there was such a case the other day.

28,857. Supposing after a man has retired under those conditions he is found to be doing work and earning a salary in the City of London or anywhere else, would you interfere with him?—Any man who has retired on the ground of ill-health, whose health is restored, may be offered employment again.

28,858. Is that done?—I think the Treasury rule says, if he does not accept it he forfeits his pension.

28,859. I was thinking rather of the practice than of the rule?—I do not know any case in which a man's pension has been taken away.

28,860. (*Mr. Hanbury.*) What are the terms of the medical certificate?—That depends on the medical man.

28,861. When an official retires from the diplomatic service, does the medical certificate state that he is permanently incapacitated before he can draw this pension?—I do not know whether it is possible to say that a man is permanently incapacitated; he might recover from his ill-health.

28,862. They do give that certificate in the Civil Service, and I want to know whether that is the case in the diplomatic service?—I do not think there is any rule as to the wording.

28,863. What I want to get at is on what medical certificate do you grant a pension in the diplomatic service?—I should say if a man went to one of the leading London physicians, and got from him a certificate stating that he considered the man was unfit to perform his duties, and that his health did not allow him to go abroad, or anything of that sort, that that would be sufficient.

28,864. And he would continue to draw a pension for the remainder of his life on that certificate?—Of course if he afterwards recovers his health, he may be offered further employment.

28,865. What means have you of knowing whether he recovers his health?—Probably, if we heard of him speculating in the City, as was suggested, or riding to hounds, we should come to the conclusion that he had recovered his health.

28,866. (*Mr. Lawson.*) Do not you think steps ought to be taken from time to time to find out whether he has sufficiently recovered from his ill-health to do the State some further service?—I think the people who retire are not generally persons whom it would be a very great advantage to the public service to get back again.

28,867. No; but then, perhaps, it is not to the advantage of the State to go on paying them a pension?—The only way in which you could withdraw a man's pension, would be to offer him a post abroad, and it would perhaps be a greater misfortune if he accepted it than it would be if he should continue to draw the pension.

28,868. (*Mr. Hanbury.*) When you say that those people who retire on medical certificates are not, as a rule, people that you would like to employ again; is that on moral grounds or merely on medical grounds? It comes to this: Is the medical certificate ever used as an excuse for getting rid of incompetent men or men whom for other reasons, except those of health, you would like to get rid of?—We certainly should not recommend a man to the Treasury for a pension unless he produced a satisfactory medical certificate, and the Treasury would not grant his pension without seeing it.

28,869. That is not quite my point; what I want to know is this, whether this medical certificate is ever made use of to get rid of public servants on other grounds than those of ill-health?—Not to my knowledge.

28,870. (*Mr. Lawson.*) In our second Report, which applies to all the departments, we say that, "We are "of opinion that the competency of the pensioner in "respect of health to perform the duties which he is "required to undertake, should be verified in case of "refusal by independent medical testimony to the "same extent as we have proposed to require before "the pension is granted. It is the duty of the "Treasury and the departments to be vigilant in "recalling to service all pensioners who are likely to "be fit for it. And the onus of proving cause of "exemption rests on the pensioner." Do you think that ought to be rigidly enforced in your department?—Certainly. I think that a medical certificate should be genuine.

28,871. That you should take those precautions that we suggest?—If it is thought necessary I see no objection to taking them, but in a very small service like ours the circumstances under which any man retires are so well known that it would be hardly necessary that we should make rules about a medical board, but I see no objection to making a man go before one.

28,872. Taking the third-class pensions, do many men come under that class to your knowledge, that is to say, the class for envoys and ministers of the second class?—Yes, the posts in South America, for instance, entitle a man to a third-class pension.

28,873. And he has only got to be there five years, and there is nothing more asked of him, is there. He must have "actually resided in some foreign State or "States, either continuously or on different occasions "during a time amounting in the aggregate to five "years." That qualifies him for receiving a third-class pension of 900*l.* per annum?—Each class comes under the same conditions. I will ask permission to read a short memorandum on the subject: Sections 6 and 7 of the Diplomatic Pensions Act (page 265 of the Foreign Office List) empower the Government to grant pensions to members of the service at the expiration of 15 years from the date of the first commission, and provided they have actually served 10 years. The pensions are divided into four classes, namely, not exceeding:—For a first-class pension, 1,700*l.*; for a second-class pension, 1,300*l.*; for a third-class pension, 900*l.*; and for a fourth-class pension, 700*l.*, subject to special conditions attaching to the grant of pensions of the first, second, and third class, and to the general condition that the pension shall not exceed the salary which the officer was drawing at the time of his retirement. These conditions are found, as regards first, second, and third class pensions, to work fairly and equitably as regards both the Government and the members of the service. The pensions of the fourth class I have already made a statement about. They are the pensions given to the secretaries.

28,874. Fifteen years from the date of his first commission you said may mean more than 15 years in practice, because a commission is only given to a secretary?—It is only given to a secretary, and it would be more than 15 years in practice.

28,875. What would it be, 18 years?—Yes, it is two years before a man gets his commission as third secretary.

28,876. Do you think that the diplomatic pensions ought to be put upon the same footing as other pensions?—I think not. I think the circumstances are exceptional.

28,877. Turning to another subject, I should like to ask you whether you can make any exact statement to the Commission as to the proposed amalgamations in the German missions further than what you did in your former evidence?—Do you mean whether it could be carried any further?

28,878. Yes, and faster?—One has just been made.

28,879. Which is that?—You will see that there is a note in the Estimates stating that on the retirement of the minister at Stuttgardt there would be one. Well, the minister at Stuttgardt has now retired, and the subject of his pension is before the Treasury.

28,880. As a matter of fact, I think, that we come second or third in the list of Powers, putting Prussia on one side, in the number of our German legations and missions?—Of independent ones?

28,881. I think of independent ones?—Because in the greater number of them we are only represented by the ambassador at one of the great courts.

28,882. Take Saxony for example: France has no legation there; we have a legation?—We have a chargé d'affaires there.

28,883. At an expense of 950*l.*?—Yes.

28,884. At Coburg we have a chargé d'affaires, I suppose?—Yes.

28,885. France has nothing?—No, Coburg, is a family court; that is the reason why we have a secretary there.

28,886. France has no representative at Wurtemburg, but we are now going to abolish our minister there, I understand?—That is so.

28,887. Our legation there costs 1,700*l.* a year?—I presume that the French representatives at the minor German courts were withdrawn in 1870, and have not been replaced.

28,888. Does not it seem to you that probably France has as great an interest, if not a larger interest, in the small German courts as we have, and that we at least might lower ourselves to their standard?—I may point out that the actual number of representatives we keep is small. There is one in Bavaria.

28,889. Bavaria, Coburg, and Wurtemburg?—Wurtemburg is now to be abolished.

28,890. Is it to be abolished altogether, or is there to be a chargé d'affaires?—The post of minister will be abolished, but a junior secretary will for the present be left there.

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

28,891. France has nothing at Darmstadt, and we have a legation or part of a legation there costing 1,350*l.*?—I think a comparison with France is perhaps hardly correct. I think you will find that the other Powers have representatives there. Compare us with Russia or Italy; I think Italy is represented at Bavaria by an independent minister, and so is France.

28,892. (*Mr. Hanbury.*) Not in Bavaria?—Yes.

28,893. It does not say so on this list?—You will see Bavaria with Austria-Hungary, Brazil, Spain, and the other countries in the list.

28,894. (*Mr. Lawson.*) At Bavaria, it is true, but at Hesse-Darmstadt Great Britain is represented, and no other power, but Russia is separately represented. At Bavaria we keep a minister?—Bavaria is no doubt an important place. According to thts list which I have put in, and which I believe to be correct, all the Great Powers maintain a representative there. It is important as being the chief place in South Germany.

28,895. I see this is the note in the Estimate: "It "is proposed on the recurrence of vacancies to amal- "gamate the missions at Munich, Darmstadt, and "Stuttgardt so as to reduce the cost"?—If that is done, only one mission will remain.

28,896. What I want to understand is, are you going simply to remove the minister or absolutely to amalgamate the missions; is that clear?—I am not aware exactly what has been settled about it, but I presume when it says that we are going to amalgamate that it means that we should remove the missions. Of course Darmstadt was, until lately, a family court. The Queen's daughter was the wife of their Grand Duke, and that had something to do with the mission being kept up.

28,897. (*Mr. Hanbury.*) Does it amount to this, that you are going to reduce the staffs in Bavaria and——? —Bavaria, Darmstadt, and Wurtemburg.

28,898. To the same extent as Saxony, because I see that Saxony is only about one half the cost of Bavaria? —Saxony has only got a chargé d'affaire with 950*l.*

28,899. (*Mr. Lawson.*) May we take it from you—it is of some importance, though it is a small matter,—that no more chaplains will be appointed, and that the existing paid posts will be swept away on the occurrence of vacancies?—I have not referred that to Lord Salisbury.

28,900. Of course the list is very anomalous and invidious, perhaps, too?—I have got a statement, I think, showing exactly the special circumstances in each case.

28,901. We have here a statement handed in by you. Vienna, of course, is clearly an exceptional case?—An unusual case.

28,902. (*Mr. Hanbury.*) I should like to ask you why, in the case of some of our diplomatic establishments, they exceed those of any other nation. Take the case of Brazil, for instance, which is 5,830*l.* as against 3,800*l.* for France, which again is very much higher than the diplomatic establishments of Germany, or Russia, or Italy. Is there any special reason for that?—We have very important commercial interests in Brazil, and therefore we have a first-class mission there.

28,903. Is it our commercial interest then, that is the sole reason for the difference in cost?—I should say it was a reason for our keeping up a mission on a large scale there. We give our minister 4,000*l.* a year, and 500*l.* for house rent.

28,904. 4,000*l.* a year is very much higher than the total cost of the whole diplomatic establishment of any other nation. France, for instance, only gives her minister 1,200*l.* a year at Brazil?—Our interests are very much greater in Brazil than those of France. The secretary of legation gets 700*l.*, the second secretary 330*l.*, and the translator 300*l.*; it has always been looked upon as an important post, and it is highly paid.

28,905. The greater cost is simply due to the fact of our larger commercial interests?—No doubt.

28,906. Does the same remark apply to Mexico, which again is very much higher than the diplomatic establishment of any other country?—In Mexico we keep up a full envoy.

28,907. What is his salary?—3,000*l.* and 600*l.* house rent.

28,908. Which again, of course, is very much larger than the whole diplomatic establishment of Germany there?—I should say that our interests were much greater in all those countries.

28,909. Well, but for a long time we had no representation at all at Mexico?—Because our relations were broken off; they would not receive a minister from us. In fact they would not receive a minister from any power that had recognised the Emperor Maximilian.

28,910. Does that again apply to the diplomatic establishment at the court of the Netherlands, which is over 5,000*l.*, as against 3,600*l.* of France, and only 2,800*l.* of Germany; what is the reason for the very great difference there?—I do not think we can really say that we have arrived at the total cost to other countries. We cannot be quite sure that there is not expenditure by those other countries which is not put into this table. I should not like to base any statement upon it. The lists put in are what have been furnished to us.

28,911. Yes; but this gives the whole cost of the staff, does it not. We have got it in detail, officer for officer, as against the English establishment. —(*Mr. Lawson.*) If in our case there were a special occasion or a special necessity there would be a special vote?—Yes.

28,912. (*Mr. Hanbury.*) You see there is a great difference here?—The French only give their mission 1,200*l.* apparently, and the Frais de Répresentation 1,200*l.*; that makes 2,400*l.*

28,913. As against our——?—As against our 3,600*l.*

28,914. 3,600*l.*, which is equal to the whole diplomatic establishment of France, and nearly 1,000*l.* greater than the whole diplomatic establishment of Germany, exclusive of the house. Then again, going to Portugal, is there any special reason why our diplomatic establishment there should be so very much greater than that of any other power,—5,000*l.*, against the 2,500*l.* of Germany, and 3,800*l.* of France; is there any special reason?—I am afraid it is impossible for me to say on what basis France and Germany settle the cost of their diplomatic establishments.

28,915. What is the cost of our minister in Portugal? —The cost of our minister in Portugal is 3,750*l.*

28,916. Is not the salary of our ambassador very nearly the whole of the cost of the diplomatic establishment of France there, and more than the total of the diplomatic establishment of Germany by nearly 1,000*l.*?—The cost of our diplomatic establishment is less than it was as a whole. In 1827 the cost of the diplomatic establishment, without including the secretaries' salaries, amounted to 140,000*l.*, and now, after a lapse of 60 years, it is, including all those, 180,000*l.*

28,917. Yes, but in the year 1890, we are still met with this fact, that at these places which I have mentioned, the simple salary of the ambassador is, as a rule, greater than the diplomatic establishment of any other nation at those courts?—It cannot be denied that our ministers are more highly paid in some places than the representatives of other countries. The only reason that I can suggest is that, as a rule, salaries are higher in this country than they are in other countries.

28,918. I must ask you again: Does not that apply to the cost of living in England, and if so, how can it apply to the cost of living in Portugal, or in France, where you are comparing the salaries of our ambassadors with the salaries of the ambassadors of other nations living in those parts?—I think it may be said that the English scale of living is more expensive than the scale of living in other countries, and that you cannot expect our English minister to adopt abroad a scale of living which is not that of people in the same position here.

28,919. (*Mr. Harvey.*) Would the fact that the English travel more as a people have anything to do with it; would the fact that the English minister abroad has to entertain more Englishmen than the representative of a foreign power in this country has to entertain of his countrymen have anything to do with it?—I should say it had a great deal to do with it. There is no doubt that our countrymen travel a great deal, and when they go to foreign countries they expect to be entertained by our representative.

28,920. (*Mr. Hanbury.*) Does not that apply to the United States Embassies and ministers, which, notoriously, are lower than any other?—I should say that

they may expect to be entertained, but they probably are not. As far as I know, the representatives of other courts do not consider it a part of their duties to entertain their countrymen.

28,921. Then do I understand that these high salaries are mainly for the purpose of entertaining travelling Englishmen?—I think that they are given in order to enable the representative to keep up a fitting state and mode of living, and to exercise that hospitality to the natives of the country, and to his own countrymen, which is expected from him.

28,922. But is not that done by the representatives of other powers?—I should say not.

28,923. Not?—I think not. In most foreign capitals one hears that the British minister entertains more than his colleagues.

28,924. (*Mr. Lawson.*) May I ask whether you expect an English minister or ambassador to entertain his own countrymen when they travel, because I never knew that?—His own countrymen certainly expect him to do so.

28,925. Then ordinary people who have not letters, or personal knowledge of him?—Anyone who has a letter, and most people provide themselves with letters when they visit foreign capitals.

28,926. (*Mr. Hanbury.*) Is that the sole reason. I want to know whether apart from that there is any other reason for these high salaries?—I am afraid I cannot give any better reason than those I have already given.

28,927. What advantage do we derive from our ministers either entertaining more Englishmen, or entertaining more foreigners than other nations do?—I think that the entertaining of the natives of the country is a great advantage to a diplomatist in the discharge of his functions. It enables him to get on terms of intimacy with the people with whom he has to do business, which he cannot easily do otherwise. Dining has been called an important part of diplomacy.

28,928. But that, apparently, is not the view taken by other nations?—Perhaps dining is not so much an institution in other countries as it is in this.

28,929. Are any of these diplomatic establishments paid for not wholly by the Foreign Office? Persia, I believe, is partly paid for?—Partly by India.

28,930. And China?—A portion of the cost for China is contributed by India.

28,931. Siam?—No.

28,932. Japan?—No.

28,933. Now going to the question of pensions, what is the reason why, in the diplomatic service, an official can be invalided on a pension after five years, whereas in the Civil Service he must have had 10 years of public service?—You are referring to the second and third secretaries.

28,934. Yes; apparently it is in section 8 of the Act?—On page 231 of the Foreign Office List you will find "Rules as to pensions of the Fourth Class. In virtue "of Her Majesty's Commissions, the service of "second and third secretaries will count for their "pensions, under the Act of 32 & 33 Vict. c. 43., from "the date of the issue of their first commission; but "the amount of pension to be assigned to them will be "calculated, so long as they remain second or third "secretaries, for each year that has elapsed since the "date of their first commission, at one-thirtieth part of "the last salary of which they were in receipt at the time "of the pension being granted, provided that no pension "shall continue to be issued to a person not incapacitated by ill-health, medically certified, who may "decline active service before he has reached the "sixtieth year of his age, after which age no person "shall be required to serve as second or third "secretary."

28,935. I am talking about a man who retires on a medical certificate. In the Civil Service he cannot retire on a pension on a medical certificate under 10 years, whereas in the diplomatic service he can retire after five years. I only want to know what is the justification for that difference?—That is the pension to invalided secretaries. On page 265 of the list you will see, "Where a person holding a commission as second "or third secretary in Her Majesty's diplomatic "service, and having served in such capacities, or one "of them, for a period of not less than five years, is "constrained from infirmity of mind or body to leave "that service before the completion of the period "which would qualify him for a pension under the "other provisions of this Act, the Treasury may grant "to him an allowance during his life not exceeding "for each year of his service in the said capacities, or "one of them (if he has only served in one), one "thirtieth part of the amount." The principle is the same, but it was made one thirtieth instead of one sixtieth.

28,936. I know, but what is the principle?—In the case of the diplomatic service, the Act takes into consideration the fact of employment abroad, the higher level of age from which service counts for pension, and rather a higher level of age in entering it.

28,937. And that is the sole reason? You see it is a very great difference both in the scale of pension and the time at which it can be taken?—It is a difference between five years and ten years.

28,938. Yes, there is a difference in the scale of pension also; it is on the scale of ten thirtieths as against ten sixtieths in the Civil Service. What my question amounts to is this: what special reason is there why not only should a pension be earned very much sooner, but why should it be calculated on a very much higher scale, for a term of actual service?—Allow me to read a short memorandum on that point:—"There has been some correspondence between the "Treasury and the Foreign Office on the subject, and "the former has suggested that secretaries of embassy "and legation should be subject to the same condi-"tion as second and third secretaries with respect to "the production of a medical certificate, but also that "the pension should be calculated as in the case of "Civil Service superannuations, at one-sixtieth of the "salary for each year of service. The Foreign Office "does not consider the conditions as to a medical cer-"tificate unreasonable, although it is not required by "the Act—that is, for the 700*l.* pensions; (that does "not apply to those that you were speaking of) but "demurs to the one-sixtieth scale, first, because diplo-"matic officers do not in practice qualify for pensions "until they are about 26 years of age, whereas ordi-"nary civil servants enter much younger, and begin "to qualify at once for superannuation; and, secondly, "because secretaries of embassies and legations would "thus be placed in a worse position than second or "third secretaries, whose scale of retirement is fixed "at one-thirtieth of the salary."

28,939. I know. One of the reasons given against an alteration is that it would be injurious if a comparison were struck between certain secretaries and certain other secretaries in the Foreign Office or in the diplomatic service, but I am making a comparison with the Civil Service, and I want to know whether there is any special reason why, apart from the fact that they have entered the service a little later, though the date you have given is the very latest at which they can enter, as I understand, whether there is any special reason why they should be allowed to draw a pension after only five years' service, and that the pension should be calculated on so much higher a scale than anything that is known in the Civil Service?—I may explain with reference to my statement that 26 was the highest limit of age, that, taking 24 as the average time at which a man enters the diplomatic service, he would not begin to qualify for a pension until two years later, when he gets his commission, and therefore, the average time in beginning to qualify for a pension is 26 years. As to the five years' question, I think I may say that no pension has ever been granted for five years' service, and I have no knowledge of such a thing having happened. You must remember that all these things are subject to the sanction of the Treasury. The Act only gives the power to recommend.

28,940. (*Mr. Lawson.*) It says "the Treasury may "grant"?—"The Treasury may grant to him an "allowance during his life." I think I may appeal to Lord Lingen to say that the Treasury would inevitably refuse if the Foreign Office committed such an act as to recommend a second secretary for a pension after only five years' service.

28,941. (*Mr. Hanbury.*) When did the last committee on pensions sit, because the only committee you mentioned on pensions is the committee of 1827, and this Act is an Act of 1869?—There has been no change in the amounts of pensions, at least, of these classified pensions; whether this comes from an earlier Act or not, I do not know.

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

28,942. What I have been asking you about comes from the Act of 1869?—It comes from the Act of 1869, but the Act of 1869 adopted the provisions, with regard to diplomatic pensions, of the Act of 1832.

28,943. May we take it there has been no alteration since then?—There has been no alteration; we are governed by that.

28,944. I think, in one of your answers to Mr. Lawson, you used a phrase about the private secretary appointing certain persons in the diplomatic service, you used the words private secretary?—But not as appointing anybody.

28,945. Something very near it, I think; however, before whom do these confidential reports, which ambassadors are bound to send home annually, on junior secretaries and attachés come?—I can only say they do not come before me.

28,946. Do you know, as a matter of fact, whether they are sent?—I do not.

28,947. Would they come before the private secretary if they were sent?—I presume they would come before the Secretary of State.

28,948. Yes, but they would not go into his hands direct, would they; they would go through the hands of his private secretary first?—I really cannot say, for I have not seen them. I do not believe any such reports are made.

28,949. You see my point is this. Here we have a distinct rule of the diplomatic service?—Yes.

28,950. (*Mr. Lawson.*) In your former examination, I think you said they were not sent?—I believe that is so.

28,951. (*Mr. Hanbury.*) You did not know at the time, and I want to ascertain now whether you know, as a matter of fact, that they are sent?—I believe they are not sent.

28,952. Then, as a matter of fact, this very important Rule 15 of the Regulations for Her Majesty's Diplomatic Service is regularly broken?—I do not believe that the rule is enforced. There are other means of acquiring the information. It has been found that all the information that is wanted with regard to members of the diplomatic service is attainable without regular reports being sent by the heads of missions.

28,953. Who has the forming of these regulations on page 231; as long as a regulation exists, I suppose, it ought to be obeyed?—Those regulations were originally issued a great many years ago. They are dated 1886, but this is only a re-issue of them. Rule 15 is an old rule, which has, no doubt, in practice become obsolete. Personally, I should be very much disinclined to enforce it. I think that such reports as those made by a minister on the people with whom he is living on terms of intimacy, and who really are almost members of his family are not desirable in any way, nor would they be of any particular use. If we want to know anything about the members of the diplomatic service it is very easy for us to learn it, and if there is anything against a man it, no doubt, very quickly reaches our ears.

28,954. Yes, but what means have you at the Foreign Office of keeping in touch with the history of your officials?—We have means of being intimately acquainted with all the members of the diplomatic service.

28,955. Even of those who do not come to London periodically?—There are very few who do not. If they do not, members of the same legation do, and we hear from them what is going on.

28,956. Therefore, as I understand, you have got no formal official way of getting any information about your subordinates?—We have no formal official way, but informally and unofficially we have every means of getting the fullest particulars about every man in the service.

28,957. Then would you suggest that this rule, which provides that your ambassadors should report upon the conduct of junior secretaries and attachés, should be not only treated as obsolete but should be struck out from the regulations altogether?—I think it may remain in abeyance.

28,958. But do you think it is a good thing to have a regulation which is not observed?—Perhaps not in the abstract, but I think it is one of those regulations which may look well on paper, but are not of any great value practically.

28,959. You admit that the question of promotion is a very important one, and that you must have some security against favoritism. Would not these reports of a second person—of the ambassador under whom he was serving—be to a certain extent a check upon favoritism?—I am not aware that there is any favoritism at all in promotions.

28,960. Of course, we know there never is anywhere, but still it is as well to have a check against it, I presume, and this is the only check, so far as I see, that exists?—I can only repeat that the Secretary of State has ample means of obtaining information as to the qualifications and conduct of members of the service, and although, of course, if it was thought desirable to do so, this rule might be enforced, I do not myself think it of any use.

28,961. My point is this, that the ambassador who, under this regulation has to send in periodical reports, does that with a full sense of his responsibility; whereas, if you only listen to the conversation, or even the gossip of people who have no official responsibility, when they speak of their colleagues or their subordinates, you have not the same guarantee for a faithful report from them?—There would be no serious objection to having these reports sent in; but, in my opinion, they would be mere formalities, and useless formalities

28,962. Then again, why should they be useless formalities?—Because I think experience has shown that reports of that nature, which have to be sent in every year, at a stated time are so.

28,963. Does not that show that the ambassadors do not do their duty in that respect; is not an ambassador under whom an attaché serves, the man best qualified to give an opinion of his services?—If the commission attach importance to our having these reports sent, there will be no difficulty whatever in calling the attention of the heads of missions to the subject, and requesting them to send them.

28,964. I have not stated whether we attach importance to them or not; I only ask you your opinion of your own regulation?—My own opinion is that it would be a useless formality.

28,965. That regulation was a consequence, was it not, of a recommendation of the Committee of 1871?—Yes, I believe it was.

28,966. I see that in one of those paragraphs there is a distinct recommendation that a report be made by the chief of the mission annually?—Until my attention was called to it I was not aware of the existence of the rule.

28,967. (*Mr. Lawson.*) I was going to ask you whether you could tell us where we can find the salary of the naval attaché; I suppose it would be in the Naval Estimates?—Yes.

28,968. He is no part of the diplomatic establishment?—No; not in point of pay.

28,969. There is only one naval attaché, I believe?—There is only one.

28,970. Is it contemplated to appoint any more?—I think it has been under consideration; but that is a question for the Admiralty, and not for us.

28,971. You have nothing to do with it?—We have nothing to do with him, except that he acts formally under the Foreign Office. He is a member of the diplomatic service while he is so employed.

28,972. (*Mr. Cleghorn.*) Have there been any reductions in any of the salaries of the ambassadors?—I do not think that any of the embassies have been reduced; most of them have been raised within the last few years. Some legations have been reduced; Brussels, for instance; and, I think, several others; but I could not say at the moment.

28,973. Is there anything like a periodical revision of the salaries at these foreign Courts?—There is, from time to time; changes are made.

28,974. By whom?—By the Secretary of State, with the sanction of the Treasury. We have no power to alter salaries without the sanction of the Treasury.

28,975. No, that I understand; but still you have power to recommend to the Treasury?—Yes, we have power to recommend.

28,976. Then there is no rule, as I understand you, as to any definite period at which these salaries and the expenses generally of embassies and legations are revised or gone through?—No, there is no periodical revision of them.

28,977. Do you think it would be any good to have such a definite period fixed, either annually, or biennially, or triennially?—Of course, you must wait for a vacancy before you can reduce the salary of a post. You cannot say to a man who has got 3,000*l.* a year: "After this "year you shall only have 2,500*l.*"

28,978. Perhaps not?—That would be a difficulty. As a matter of fact, revisions frequently take place; perhaps it is found necessary to increase the salary of one post. Then we should always endeavour, in order to meet the views of the Treasury and also with a view to public economy, to make a reduction in some other post.

28,979. That is to say, you try to make the one meet the other?—We try to make the one meet the other.

28,980. What I come back to is this: that there is no rule or understanding whereby upon vacancies at any particular place occurring, there shall be a reduction or a revision?—No fixed rule, but reductions are made when they are found possible. Sometimes a pledge is given to the Treasury that when such a post becomes vacant there shall be a reduction. In some cases that is done to meet an increase sanctioned elsewhere.

28,981. So that the aggregate should not be increased?—So that the aggregate should not be exceeded. As a rule, that is the way in which our expenditure is regulated. We always endeavour to avoid any increase to the aggregate sum by finding equivalent reductions whenever any increase is necessary. That reduction of salary at Paris which I spoke of, and which took place two or three years ago, was utilised in order to increase the salaries at Berlin, and Madrid, where they were found to be inadequate.

28,982. So that there was no saving to the State there?—There was no saving, on that occasion.

28,983. Then, as I understand, you do not think it would be of any practical utility to have a rule or regulation whereby periodical revision of the expenses in all the embassies should take place?—I do not think a periodical one would; it would be very difficult to make it periodical, I think.

28,984. Then you would prefer to leave each case to be settled as the circumstances arise?—I think that is the best plan.

28,985. On the question of commercial attachés, am I right in thinking that there are two of those gentlemen in existence?—Yes, there are two.

28,986. One of whom we have seen, and the other ——?—Is Mr. Crowe, who resides at Paris, but is commercial attaché for the western States of Europe.

28,987. He takes in all Europe with the exception of ——?—Russia and Turkey in Europe.

28,988. Have you formed any opinion as to the results of these appointments?—I think they are decidedly useful. I may refer to Mr. Law, as he has been before the Commission. He is a very active man; he has travelled about to many of the ports in Russia, Turkey, and Persia, and has obtained a great deal of valuable information. I think also that his visits have tended to encourage the consuls, and to point out to them in what direction their reports should go. He has also drawn up very valuable reports on various subjects.

28,989. You are aware that he has very extensive boundaries?—Yes.

28,990. He himself told us that they are much too extensive for him to overtake. Now, would you go the length of saying that more of these attachés should be appointed?—I think that it would be very useful; but such appointments are very difficult to fill. I think that the suggestion for giving special allowances to regular members of the diplomatic service in order to induce them to take up and study commercial questions is a good one, and might be carried out much more economically than by appointing exclusively commercial attachés.

28,991. Still, you would favour the idea of having certain gentlemen who would take this special duty more particularly under their charge?—I think it a very good idea.

28,992. And, so far as you have observed or know, the results of what those two gentlemen have already done have been useful?—Decidedly, very useful indeed, they give us a great deal of very valuable information.

28,993. Do you think that the services of the consuls and vice-consuls at the various ports could be more utilised for the advancement of English trade than they have been or are?—That is not a matter with which I have specially to deal, but I know that a great deal has been done in the last few years to draw their attention to questions of importance. I am not able to suggest any direction in which more assistance would be given by them.

28,994. I daresay you are aware, at least I think I am right in saying that it has been alleged, that the consuls for other countries do more for the trade of their countries than English consuls have been in the habit of doing for theirs?—It is not a matter that I could speak of from my own knowledge, because I do not particularly deal with those questions, but from what I have heard from others, I do not think it is the case.

28,995. You do not think so?—Some years ago, when a great effort was first made by the Germans to push their trade in all directions, their consuls may, for a time, have shown, perhaps, more activity than ours, but now the attention of commercial men has been called to the importance of getting information on those questions, and consequently the consuls have made further efforts. I have no doubt they do at least as much, and I believe more than the consuls of any other country.

28,996. But that is comparatively a modern movement?—I think that probably 10 years ago very much less was done in that way by the consuls of any country. It is no doubt the result of increased competition.

28,997. I suppose you favour the idea of Englishmen being appointed at all places where it is at all possible?—I certainly would appoint an Englishman in preference to a foreigner, if there was an Englishman available.

28,998. Yes, but even at what you would call a moderately paid consulate, would you prefer an Englishman?—The consulates are divided into two categories; the first what the French call the *consul de carrière*, which is the regular consular service, and the other where a resident merchant undertakes the duties of consul and only receives an allowance to pay for his office expenses.

28,999. Do you think that when that gentleman is a native of another country he is likely to favour the trade of his own country more than that of England?—In many cases his own country might have no important trading interests; in others he might be a native of the country——

29,000. No, take any port in Turkey, and, say, a German is appointed?—Yes, but as a rule that would not be done.

29,001. I merely instanced that as the first thing that occurred to my mind?—We should not appoint a foreigner if we could get an Englishman, but, of course, there are some ports in the world where there is no English merchant. You mentioned Turkey; there are some small ports in Syria where there is no resident Englishman.

29,002. Then, as a matter of necessity, you fall back upon the best you can get?—As a matter of necessity we should fall back upon the best man we could get.

29,003. I suppose we should hold that an Englishman would have more interest in promoting the trade of his own country than a native of any other country?—Certainly.

29,004. Even if we had to pay a larger salary for the services of an Englishman, it might not be a loss in the end?—But we should never think of paying a salary to a foreigner. The paid consuls are invariably Englishmen.

29,005. Are they?—Certainly. The only cases in which foreigners act as consuls is where they are unpaid; and then they receive a small allowance for office expenses, but nothing more.

29,006. (*Mr. Lawson.*) In reference to the regulations of the diplomatic service, do not you think it is a pity to allow this 15th regulation to remain amongst them, considering that it has never been enforced, and that you do not desire to see it enforced. I believe that it is the only one to which those conditions apply?—I was only expressing a personal opinion when I was pressed very much on this subject; without the sanction of the Secretary of State, I could not express a formal opinion as to whether it should be struck out, or should not be enforced.

Sir P. W. Currie, K.C.B.

27 Feb. 1890.

29,007. But still, you and your predecessor, the permanent heads, have been of that opinion, I take it?—Well, yes, I think so.

29,008. Do not you think it misleads the public, to a certain extent, when they see this rule, and it is very precise: "Heads of missions will be required to report annually." I am not combating your opinion, only asking you whether that rule ought to be there at all?—That is a matter with regard to which I cannot speak without the sanction of the Secretary of State, who may hold an opinion entirely different from mine.

29,009. Still, it has never been enforced?—As far as I know it has never been enforced.

29,010. If annual reports are a mistake, are you against all official and formal reports?—I should not, in a service like ours, which is not a large one, be in favour of reports on individuals.

29,011. Then you are as much against periodic reports as you are against annual reports?—I should be against formal reports on people's qualifications, because I do not look upon them as reliable. In any special case, if we heard of misconduct on the part of a member of the diplomatic service, we should refer to his chief.

29,012. As an outsider, reading your regulations, I should have imagined that this rule was so precise as to be obligatory upon you, and, therefore, I should think that it would have been better to have removed it?—I will mention the matter to the Secretary of State.

29,013. (*Chairman.*) There is a small point about the Queen's messengers. Do you think any change might be possible in the rank of the men that are employed in that work?—Yes, I think it might. I think that as these messengers retire it would be possible to replace them by such men, perhaps, as retired non-commissioned officers. I should, myself, consider that an improvement.

29,014. Is there any other point which has arisen in the course of your evidence to-day, or anything else which you would like to mention to the Commission? I think I may take it upon the cost of the establishments generally, that you entertain the opinion, which is the opinion of the committee which last sat upon these diplomatic establishments, that the cost of them is not extravagant?—I think not. I think on the whole it would be very difficult to make any large reductions without impairing the efficiency of the service, although in some respects they may appear high.

29,015. You think that, considering the higher scale which generally prevails for public salaries in England, and taking the diplomatic establishments as a whole, they are not unreasonably in excess of the establishments of other countries?—I think so; and it is necessary to give good salaries to secure good men. Comparing the salaries which our representatives receive and the salaries which persons in the public service in England in corresponding positions receive, I do not think they are too large. I consider that a comparison with the salaries received by persons in other countries is misleading. I think they can be best compared with the salaries given to other public servants in this country.

29,016. I suppose you would be of opinion, generally, that the object for which a large salary is given at Paris, or Berlin, or anywhere else, is that, taking it generally, it should be very nearly sufficient to meet the ordinary cost of the establishment, and probably in foreign countries that has not always been viewed in the same light?—I think, certainly, that a man should not be called upon to spend a very large sum in addition to it. As far as I have heard from our representatives, there is hardly any place where they really do live upon their salaries. With regard to foreigners, I should say that the great Powers are generally represented at the great courts—especially at a place like Paris—by men who have private fortunes, and who, if they entertain, spend a good deal more than their salary. With regard to the representatives of foreign Powers at smaller places, they probably do not entertain at all, and live in a very small way—in a way that would not be considered sufficient for our representatives.

29,017. We should be obliged if you could give us the information respecting the pensions of foreign ministers which Mr. Hanbury wished to have?—I will endeavour to obtain it. I understand that what is desired is: "Information as to the system of pensions "in the diplomatic service in foreign countries."

The witness withdrew.

Adjourned till Thursday, March 6th.

EIGHTY-FIFTH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, March 6th, 1890.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN, K.C.B.	Mr. R. W. HANBURY, M.P.
Lord BASING.	Mr. H. L. W. LAWSON, M.P.
Mr. A. S. HARVEY.	Mr. J. W. MACLURE, M.P.

Mr. H. WALPOLE, C.B., *Secretary.*

The Right Hon. Sir CHARLES DILKE, Bart., called and examined.

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

29,018. (*Chairman.*) Perhaps we had better get on the notes first what has been your service and experience at the Foreign Office?—I was appointed Under Secretary of State in April 1880, and I held that post till December 28th, 1882. I was at the Foreign Office during the re-organisations of 1881 and 1882. I had previously been a member of the Committee of 1871, which, I think, has been referred to in the course of your proceedings. I have had some experience of the embassy and the messenger system, by having been chairman of a Royal Commission which carried on treaty negotiations abroad through an embassy; communicating with the Secretary of State through an ambassador.

29,019. You have also, I believe, been in the habit of residing a good deal abroad?—I have not resided much abroad, but I have travelled a great deal abroad, and have seen of course something of embassies, and legations, and consulates, in that way.

29,020. That being your experience, I think possibly the most convenient plan would be for me to ask you to be so kind as to give the Commission the benefit of your experience, taking your own points in your own way?—The point to which I should attach most importance, and which I should ask leave to name first, is that of the amalgamation of the services. In my opinion it would be desirable to amalgamate not only the Diplomatic and the Foreign Office services, as has been proposed, but all three services; that is to say, the Diplomatic, the Consular, and the Foreign Office services. I would treat the Diplomatic and the Consular services as the Foreign Office abroad, or the

Foreign Office as the Diplomatic and Consular service at home. I would make them one service,—the one like the Fleet, and the other like the Dockyards; the one like the German army, and the other like the German General Staff; men going backwards and forwards from one to the other. That is the case with most other countries; it is especially the case with the French service. Of course in saying that, I say nothing with regard to the difficulties which may be caused by existing rights; as to that I am not specially skilled. There are members of this Commission who would appreciate those difficulties more exactly than I could do. Generally speaking, of course I should wish to reserve existing rights, but as a council of perfection I have no doubt that the amalgamation of the three services would be to the advantage of the country and of the services themselves.

29,021. (*Lord Basing.*) Do you mean by the consular service the paid service only?—I would have none but a paid service—the exceptions would be very small, I think. Of course there are places where it is desirable to have a kind of titular consul, and in those cases I think special treatment might be accorded to them. It is done, I think, by foreign Governments; I believe they all have certain unpaid servants but generally speaking, I think the services should be paid services.

29,022. (*Chairman.*) Take first the amalgamation of the Foreign Office and the diplomatic service; how would you meet the difficulty which it has been suggested to us arises from the expense of living abroad?—As a matter of fact there are very few men in the Foreign Office who would not have sufficient income to live abroad if they lived carefully. The men would to some extent sort themselves. You would not of course send a man abroad except under very exceptional circumstances if he were not himself willing to go. The great majority of the clerks in the Foreign Office under present circumstances are willing to go abroad and like to go abroad from time to time, and there are as a fact in the office only about three or four whose circumstances would be such that they could not afford to do so. There is, I think, a good deal of exaggeration as to the amount of income which is necessary for a careful man to live upon in foreign countries. Of course there is the case of men who live at home in London with their relations, and who can live almost for nothing; but those are exceptional cases. One or two of the four or five men in the Foreign Office who could not afford to go abroad are nevertheless men, although I say they could not afford it, and although they say so themselves, who are not living with their families in London, but are living carefully in London, and who, I think, could themselves afford to go abroad if they lived as carefully there as they do here. It is often said that men must in the diplomatic service keep up a certain position. That really only means that they must live in a fairly central portion of the town; it does not imply any very great expenditure, because in all cities there are quarters which are thoroughly respectable and fairly central, and which are cheap. For instance in London, Bloomsbury is a quarter of that kind; and there are quarters of the same kind in most foreign cities. Therefore I think there is a certain exaggeration about the amount of income which is required for a young man who lives carefully to live in a foreign capital.

29,023. Then you think that that condition which is generally stated to the parents of young men coming into the service might be done away with, namely, that they will have to be guaranteed so much a year when they become attachés?—As a matter of fact there are some men serving abroad who are Foreign Office clerks in whose case no such condition was made, and some of them are men who are by no means amongst the most wealthy of the clerks in the Foreign Office. The French have a similar condition, but it is never acted upon. They can act upon it; it is laid down by a French circular that a man must have 6,000 fr. a year of private fortune to be admitted to their service at all, but it is not insisted on in practice. The rule is there, but they do not act upon it.

29,024. Do they make more use in France of unpaid attachés?—In the Foreign Office, yes; in the diplomatic service, I think not; they have some, but not a large number. Generally speaking, I think that a few unpaid men might be used if you want to have a staff at your embassies on the same scale, as regards numbers, as it is at present. There are two reasons which may cause you to wish for that. The one is to have your embassies nominally as strong as those of other countries, because other countries pad their embassies with men who have not very much work to do, and it may be thought undesirable in some places to have smaller embassies than are kept up by foreign countries. Then there is another reason which may be given, but to which I do not attach importance; it is that the copying work which has to be done in the embassies, although confidential, and therefore only to be trusted to members of your regular staff—highly confidential men—is nevertheless very dull and monotonous work—disagreeable work—and work which the men do not like; and of course if you reduce the numbers of men in your embassies you throw more of that disagreeable work upon the men, and the men must work a considerable number of hours in the day. That is opposed to the traditions of the diplomatic service, and there is a certain difficulty, no doubt, in getting men to do it, especially in getting the present men to do it, who have been used to the other system.

29,025. Then your suggestion with reference to amalgamating the Consular service with the Diplomatic and Foreign Office services, if carried out, would involve a very large increase of expenditure, would it not?—Well, not necessarily, I think. I will presently, if you will allow me, go into some little detail of the French service, showing that they have not tried to establish what is called a ladder or scale of salaries for their consular service. Their salaries are calculated solely, according to the theory, at all events, with reference to what it costs to live in each place. That is to say, the salaries are all of them salaries which are so calculated as to afford no special advantage to the men taking the apparently more highly-paid place over the men taking the apparently more lowly-paid place. Their consular salaries are salaries calculated purely on the cost of living.

29,026. (*Mr. Hanbury.*) Does that apply to the diplomatic service at all?—It does not apply in an equal degree at all events to the diplomatic service. I think a saving might be made with a view to carrying out amalgamation and paying in some cases higher salaries in consequence, by reducing the staff of the embassies in the way in which I have just suggested. In my opinion there is not work in the embassies for the number of men who are employed in them.

29,027. (*Chairman.*) Could you give a concrete instance. Could you take one particular embassy by way of illustration?—I would take any embassy. In any embassy I have reason to think that under the present system you do not and cannot exact from the men, many of whom are not paid at all—some of whom in the lower ranks are paid very small salaries and have come into a service in which they do not expect to have to work very long hours,—you cannot practically exact long hours in the chancelleries from them. In each embassy, therefore, the work falls mainly into the hands of the men who are inclined to do it. In some cases those men are men of one rank, in other cases of a different rank. You cannot lay down a rule throughout the service, and say that the work is done by the first secretary or that the work is done by the second secretary, for, as a rule, it is done by the men who wish to do it, and those are the men who ultimately get on. Now, take any ordinary case—take Lisbon, for example. Perhaps the Commission have the Foreign Office List before them and will see how many men we keep at Lisbon. As a general rule at a place like Lisbon there is really no diplomatic work. Then an exceptional pressure will come, such as the pressure which came at Lisbon lately, but in those cases I think that could be done which is sometimes done now; namely, a man could be sent out specially from the Foreign Office to strengthen for the time the staff of the legation.

29,028. At Lisbon I see there is, besides the envoy extraordinary, a secretary, a second secretary, and a translator?—Yes.

29,029. Would you be of opinion that the staff could be reduced?—I should say so, certainly, in the ordinary state of work at Lisbon, not of course at a special moment like that which has lately occurred at Lisbon. I should say generally, that the staff in almost every embassy and legation is unnecessarily large if the men were to work long hours and to do the kind of work which a Foreign Office clerk is expected to do.

29,030. Do you think anything could be done, supposing such a reduction to be made in the higher

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

offices at the embassies, by permanently attaching some Foreign Office clerks of the lower division or the second division, or something of that sort?—That raises another question. I myself personally am opposed—I know this Commission have taken the other view, and I know that very few agree with me—to the existence of clerks of different kinds. The experience I had in the Local Government Board leads me to think that, saving all existing interests, there should only be one class of clerks, but as regards the Foreign Office, I would keep it separate from the ordinary offices in this country, and treat it as a branch of the diplomatic and consular service. Therefore, when you ask me as to lower division clerks, I must begin by saying that I am not in favour of the distinction which at present exists between lower division clerks and what I think are called establishment clerks.

29,031. (*Mr. Lawson.*) They are called establishment clerks in the Foreign Office. I presume you mean the first division clerks?—I beg your pardon, yes.

29,032. (*Mr. Hanbury.*) Do you mean you would not like to have men in the Foreign Office of the same type or class as the lower division clerk?—Of course I know these things must be retained on account of the existing interests. I know you cannot make a clean sweep of the system at the present time; but I should say, theoretically speaking—I am very much of an outsider in these matters—that the whole lower division system could not last; that the notion of a lower class knocking their heads against a barrier is one which it will be impossible long to maintain; that they will break through that barrier, and that all distinction between classes of clerks will be broken down.

29,033. (*Chairman.*) Pursuing that point only a very short distance further, do I understand you to think that, especially with reference to the Foreign Office, you would have a clerk of a higher kind coming in?—I would have only one examination for the Consular, Foreign Office, and the Diplomatic service, and I would treat that as a service apart. If you have lower division clerks as you have them, say—given the fact that they exist—I am of opinion that they can be used in certain branches of the Foreign Office as they are used at the present moment, and indeed I am of opinion that—given their existence—they can be used more largely than they are at present.

29,034. I think we shall come to that point further on in your evidence?—Yes. I may give one other reason, if you will allow me, in favour of amalgamation, which is that I think it would tend to fill the service with men more inclined to work than many of the junior diplomatists are, and that it would reduce the numbers of the junior diplomatists, and therefore would give better promotion. At the present moment the absence of promotion in the diplomatic service is one reason why you cannot expect to get very willing and very general work; men do not see a sufficient chance of getting on. Take the case of an ordinary secretary of legation. He sees unfortunately in most cases very little chance of ever rising to be a minister, far less an ambassador. Take such a case as that of Mr. Edwardes, for instance, who is the very well-known secretary of legation at Washington, and who has made reports which have been very much praised in Parliament. I should fear that Mr. Edwardes has very little hope of becoming even a minister, let alone an ambassador, from the small number of higher posts and the great number of years men have to be kept in the lower posts, in fact from the stagnation of promotion in the service.

29,035. You were speaking of the reduction of numbers at the embassies; have you anything further to say on that point?—If you want to have a number of young men in embassies for what are really social purposes, and because other countries have them, then I think you must look to having honorary attachés, such as our present unpaid attachés, and such as the Austrian unpaid attachés. They are very numerous in the Austrian service, and their embassies are filled with them; they are men who go into the service only for a time, but who can be trusted to do a certain small amount of copying work, and do it confidentially, but who will not make a permanent career of the service, and will not expect promotion.

29,036. (*Mr. Lawson.*) Social ornaments?—Yes; doing a certain amount of copying work.

29,037. (*Mr. Hanbury.*) And distinctly not expecting promotion?—Not expecting promotion.

29,038. Is that the case in the Austrian service do you say?—I think these young men do not remain in the service as a rule.

29,039. (*Mr. Lawson.*) There are a few of them in England?—There are a few of them in England. I think you would be always able to find men of that kind; I think the ambassadors themselves, if asked to find such men, would mostly be able to find such men among their personal friends.

29,040. There are one or two at present in our service?—Yes, there are a few.

29,041. (*Chairman.*) As I understand, you are in favour of that practice?—I do not really myself think it necessary. I should not mind making our embassies more short-handed than the embassies of foreign countries. I think the various countries in their diplomatic services tend somewhat to imitate one another in the scale of their embassies. I do not think it really necessary that they should do so. When I speak of amalgamation, I ought perhaps to add that I should not propose to make the service an absolutely close service; I would not propose to take away the power that already exists and that is already exercised, of bringing in outsiders. I do not think it would be possible to prevent a cabinet from having the opportunity of employing at a particular post a particular ambassador whom they thought the best man to send there. Therefore I do not wish to be understood as desiring to make it an absolutely close service.

29,042. Would you make the same exception with regard to certain consulates?—I would make the exception; but I should hope that it would not be acted upon except in very rare cases indeed. There have been cases where men have been brought in as consuls-general who have been from the first most valuable men,—for example, Mr. Crowe, who was brought in, I think, by Lord Palmerston as a consul-general; but as a rule, I should hope that the practice would be discouraged, with a view of giving a fair chance of promotion to the men in the lower posts. Would you like me to mention other ways in which I think money could be saved with a view to any increase of charge which might be involved in amalgamation?

29,043. Yes, if you please?—I think that money might be saved by the abolition of certain posts, as well as by the reduction of the numbers employed in others. At the same time all the money so saved could not be devoted to increase of salaries, I think, because there are possibly some stations where the pay of the head of the mission is not sufficient at the present moment. I agree with Mr. Bryce, who, I think, believes that Washington should be a more highly paid post. When I was at the Foreign Office I sent forward a memorandum proposing that we should make our legation at Washington into an embassy. The difficulty is that the Americans will not respond; they will not make their legations into embassies; but I should be inclined to make ours an embassy, even without reciprocity. There are many cases in diplomacy where there is an absence of reciprocity, where country A dealing with country B is represented by an envoy of higher rank than country B in dealing with country A. That is especially the case with regard to representation at and from the Vatican. There are cases each way. There are many such precedents; and I cannot see why we should not convert our legation at Washington, which really on the whole is now our most important representation abroad, into an embassy, so as to enable ourselves to treat it as being really, so far as promotion goes, that which in fact it is—about the most important post. On the other hand, I think that the importance of Vienna and Rome and of Constantinople has declined; it may be only a temporary decline, but under the present grouping of the Powers, Berlin appears to me to have become more important, and Vienna, Rome, and Constantinople less important than they were. I should look, therefore, speaking generally, to perhaps a larger expenditure at Berlin, but in the long run to a smaller expenditure at Vienna, Constantinople, and Rome. Then there are what are called the small German missions. It has often been proposed—it was proposed before the Committee of 1871—to abolish or at all events to greatly reduce those missions; and they have been reduced. But since 1871 there has been a considerable political change in practice in the position of the smaller German Courts; and I cannot but think that there would be a positive advantage in our ceasing to be diplomatically represented at those smaller Courts. The German Empire view with some jealousy the re-

presentation of other Powers at those Courts; and I think that it would be positively advantageous that it should cease.

29,044. There is a reduction contemplated; are you aware of that?—Yes.

29,045. (*Mr. Hanbury.*) Would you abolish the representation altogether at all of these small Courts?—Yes, I would abolish it altogether. If you need to get information at those Courts, it seems to me that a well-chosen consul-general or a well-chosen consul would be quite able to do it.

29,046. As we have at Buda-Pesth, for instance?—Yes; it is indeed the case that if you could afford to employ at some of these small Courts your best men—men of very great ability—they would succeed in getting information there. No doubt men, now high up in the service, have been employed in past days at those small Courts, who have made them centres of information. But you cannot hope to be permanently represented at those Courts by your best men—you cannot expect that your best men will be anxious to represent you at those small places; and on the whole I think they should be abolished.

29,047. (*Chairman.*) The whole of them?—The whole of them. I see no reason for making any exception.

29,048. Coburg, Baden, Darmstadt, Saxony, Wurtemberg?—Yes.

29,049. (*Lord Basing.*) But Wurtemberg is not in the same position as the others?—There are no two of them in exactly the same position; but really I should make no exception. I do not think that it is necessary that we should have diplomatic representation at any of them, Coburg, Munich, Stuttgardt, Carlsruhe, Dresden, and Darmstadt. The most important places at the present moment seem to me to be Washington, Berlin, and St. Petersburgh, and next to those in order, Paris. With regard to Paris, while it is very important for good relations between ourselves and France that there should be a popular embassy at one end or the other of the line, the capitals are so close that it does not very much matter whether it is through the French representation here or through our representation at Paris. There are certain reasons which make it difficult for an English ambassador at Paris to exercise the same influence on the relations of the countries which may be exercised by a popular French ambassador here. French society is so broken up by political divisions, that practically an ambassador at Paris may do more harm than good by entertaining there.

29,050. (*Chairman.*) So that your opinion rather points in the direction of diminishing the importance of the embassy?—I think that while you, no doubt, need to keep up a big house and to pay a large salary to an ambassador in Paris, you need not keep so large a staff at Paris as you do at the present time.

29,051. (*Mr. Lawson.*) Things are very different now to what they were during the Second Empire in that respect?—Yes. Of course the centre of Europe has shifted since the Second Empire.

29,052. (*Chairman.*) While we are upon that point, could you express any opinion upon the actual cost of two embassies, taking Berlin and Paris?—We have a very beautiful but an expensive house in Paris, which we shall have to keep; and no doubt, therefore, there is a certain reason for a large expenditure upon the ambassador's salary or upon the virtual salary at Paris, which may not exist in the same degree at Berlin. I am not able to give information as to the real value of the ambassadors' salaries at Berlin and Paris respectively contrasted.

29,053. Do you think it is the case, which one hears generally stated, that no ambassador is able to live upon the salary that he receives?—I should say that no ambassador can save upon the present system except the ambassador at Constantinople. At Constantinople, where there need be no entertaining, an ambassador could save. I do not know that any ambassador ever has saved at Constantinople, but I think he could save. I should doubt his being able to save at any other embassy on the present system; but then the present system involves a large amount of entertaining, and it is a question how far that entertaining is necessary or desirable. There is entertaining of two kinds; there is the entertaining of British subjects, and there is the entertaining of the people of the country to which he is sent. With regard to the entertaining of British subjects, an ambassador is sure to entertain British subjects to a certain extent, because his own personal friends will come to the place where he is, and he will naturally wish to entertain them; but it is not specially an advantage to the country that he should do so, and I do not know that that ought to be considered in settling the scale of his salary. I do not think that, except in very distant places, it ought to be understood that an ambassador should entertain those who bring letters of introduction to him It has almost ceased to be the custom in Paris: letters of introduction are not given, I think, to Paris except where there is some special reason, such as a man desiring to study the educational system, or some other special reason. Generally letters of introduction are not given to Paris, and I cannot see why an ambassador, at Rome for example, should be expected to entertain those who go there to spend the winter, any more than the ambassador at Paris. On the other hand, with regard to entertaining the people of the country to which he is sent, it is most important, if he entertains the right people; but then unfortunately you have no means of securing that that should be the case. In most countries now society has little influence upon politics, and an ambassador and an ambassadress are naturally tempted to entertain people whom they meet and whom they like rather than to entertain the people who have political power; and therefore it is doubtful how far the entertaining does much good. A certain amount of entertainment is necessary. An embassy must not remain altogether shut up. It evidently must from time to time give a large party and a large dinner to the ministers of the country to which the ambassador is accredited.

29,054. Then looking at it from that point of view, are you prepared to suggest that there might be a reduction in the salaries?—I think, saving existing rights, that there might be a reduction at Vienna and at Rome. Constantinople is a little difficult. Some reduction could take place there, because I think an ambassador could save there at the present time; but I do not think that a very large reduction would be possible at Constantinople, because there are expensive houses to be kept up, and the climate is such, and the local circumstances of Constantinople are such, that an ambassador is almost driven to live a part of the year in Pera, and a part of the year in Therapia, so that two very large houses have to be kept up.

29,055. (*Mr. Lawson.*) It is a very heavily manned embassy, is it not?—Yes; I would in all the embassies reduce the numbers.

29,056. (*Mr. Hanbury.*) You have been mentioning the number of embassies that you would like to reduce; how should that be done?—I would reduce the numbers at the embassies. Do you mean as regards the salaries?

29,057. Yes; for instance, the salary of our ambassador alone at Paris is almost equal to the charges of the whole diplomatic establishment of any other country?—Germany, of course, does not entertain at Paris. The Germans I fancy give one party at Paris, and that a very formal party and as small as possible, every year. Of course there are special reasons why the Germans should not entertain in Paris.

29,058. Take Italy and Russia?—Russia does entertain in Paris considerably, and, but for the fact that we have a most expensive house to keep up, I see no reason why there should not be a reduction. I believe that the house we have at Paris is a very costly house.

29,059. That is what I want to get at; that a great deal of our expenses in Paris are really due to the fact that we are over-housed?—It is a very fine house, and a very beautiful house, and no doubt a very costly one. In connexion with amalgamation and with the reduction of staff, I think that there is no reason why, in the long run, and saving all existing interests, you should everywhere have virtually two heads of your mission. At the present moment the first secretaries of embassies are substantially ambassadors, who take the place of the ambassador when the ambassador is away; so that there are two men for social purposes, and for purposes of consideration, virtually of equal rank. In other services, in the Russian service for example, that is not the case. At Washington I believe that when the Russian minister is away, the Russian consul-general from New York comes down and takes his place as chargé d'affaires. In the long run, and saving the interests of the people who are now employed, I can see no reason why our consul-general at New York should not take the place of our minister at Washington when he is away.

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

29,060. Would that do in other countries besides the United States?—I have not sufficiently considered it to be able to say whether it would or not. There are men employed in embassies abroad, other than secretaries of embassy, who are competent, from their ability and standing, to take the place even of an ambassador, if you will disregard past tradition in the matter—say in Paris for example—the commercial attaché, Mr. Crowe, would be capable of holding his own with any minister or ambassador with whom he could be brought in contact. I have no doubt that in other capitals, by going through the book and considering the service, you would find that that was the case; that is to say, that there are more men than are really needed in many cases.

29,061. You said that some of our missions abroad might be done away with; do you think that in some cases consulates might take their place?—I think so. There would of course, under the system I should suggest, be less distinction between consulates and embassies than there is at the present time. It would not be like it is now, as a rule—a matter of taking a man who had been seeing sea captains all his life and putting him to do diplomatic functions. Under the system which I should propose, which is the system which exists in the French service, a man would not have been seeing sea captains all his life; he would have been changing backwards and forwards from one set of functions to the other.

29,062. (*Mr. Harvey.*) Would not this be a convenient time for you to state how you propose to organise your amalgamated service?—Well, generally speaking, I should say that the French system, which I would explain, would afford a base for the consideration and treatment of the matter.

29,063. (*Chairman.*) Perhaps you would kindly explain that now?—I will; but perhaps before I leave this point I might mention that there are one or two matters which come very closely into this. It may be said that we have a power of amalgamating at the present time, and no doubt some men have passed from the one service to the other. There is the case of Sir William White, who is now an ambassador, who began his life in the service as a clerk in a consulate; and Sir William Kirby Green, who is now a minister, who began life as a clerk in a consulate also.

29,064. (*Mr. Lawson.*) Sir Spenser St. John?—Sir Spenser St. John is another case. Of course there are some persons called consuls at the present time who have really been brought in as diplomatists at a late period in life, and who are among the best men in the service, such as Sir Evelyn Baring, and Colonel Euan Smith and Consul O'Neill. One advantage in amalgamation which I have not yet mentioned would be that the consular department of the Foreign Office would be worked by men understanding the consular work. At the present moment there are one or two consuls employed, I think, usually in the consular department of the Foreign Office,—but the consular and the African department are together, and I believe that the consuls do the African rather than the consular work. There has been a certain amount of friction and trouble caused by the fact that the consular department of the Foreign Office is not worked by men having an intimate personal knowledge of the consular system. And in a less degree there are sometimes difficulties in the Foreign Office, and friction between the Foreign Office and the diplomatic service caused by many of the men high up in the office not having been abroad. That does not apply to the younger men. Most of the younger men in the Foreign Office have had some sort of foreign service on special missions. I should also say, with regard to amalgamation, that at the present moment there is nothing to prevent the Secretary of State from misusing his consular patronage. I do not mean to say that it is generally done, but there have been cases, which will be familiar to members of the Commission, in which men have been brought into the consular service late in life who are not thoroughly fit for it, for one reason or another. Another argument which I should like to mention in favour of amalgamation would be that it would explain and justify and enable you to continue that separate treatment of the Foreign Office from the rest of the civil service, which, in my opinion, is necessary. I think, unless you at all events amalgamate the Foreign Office and the diplomatic service—of course that would not apply to the consular service—but unless you amalgamate the Foreign Office and the diplomatic service, you will not be able permanently to maintain that separation between the Foreign Office and the rest of the Civil Service which, in my opinion, is desirable. The Foreign Office work seems to me to be very different.

29,065. (*Chairman.*) You are speaking now of the restricted competition for entrance to the Foreign Office and the diplomatic service?—Yes. I do not think it is possible. I do not know whether anybody really does think it is possible to apply to the Foreign Office absolutely unrestricted competition. I agree with those who think that foreign governments would place men in the Foreign Office under such a system. The examination of course is, and would always be, largely an examination in foreign languages; and you are specially exposed to receiving men of mixed parentage who have been educated abroad and about whom you know very little—I have no doubt that if you had unrestricted competition chiefly in foreign languages for the Foreign Office, if you did not keep out men of mixed parentage and of foreign education, you would in the course of time get some men in the office that you could not trust.

29,066. (*Mr. Lawson.*) That has not always been your opinion, has it?—I dare say not, but if it was not, that was before I had seen the working of the system.

29,067. (*Mr Hanbury.*) Would you put any check upon the number of nominees, would you have a certain number of men nominated for every vacancy so as to keep a check on patronage? You see it is quite possible that the Secretary of State might nominate only one man?—They have the same system I may say in France of restricted competition after examination, and there they nominate everybody who applies, except their political opponents. The nomination is rather more widely given there than it is given here, but still it is given here already sufficiently widely to cause the standard to be very high. I think that the standard for the last six or seven years has virtually ranked with the First Class at Oxford or Cambridge. It is a very high standard indeed. Of course the diplomatic standard is nothing like so high.

29,068. (*Chairman.*) There are not the same number of competitors for that?—It is nothing like so high.

29,069. (*Mr. Lawson.*) As a matter of fact you have had university men of first rate distinction competing for the Foreign Office?—Yes. In answer to Mr. Hanbury I should rather look to the weight of public opinion upon the Secretary of State to prevent an extremely restricted competition.

29,070. (*Mr. Hanbury.*) But public opinion has not much opportunity of being formed; it does not know what is going on?—It is informed by the unfortunate rejected persons, very often.

29,071. You would not lay down any hard and fast rule that there should be six at least, or something of that kind?—I should have no objection to do so. Of course you could drive a coach and four through even such a rule as that, because you might nominate one man of considerable brain power and a number of men of very inferior capacity.

29,072. (*Mr. Lawson.*) Still their powers are not accurately ascertained before they come up for examination?—Sometimes a good deal is known about one or two of them beforehand. I have often heard before an examination, "There is so and so coming in; he is a "very good man indeed. He is a high first-class man "from Oxford, and so forth—sure to get in—sure to "beat the other men."

29,073. (*Chairman.*) Perhaps now we have come to the point at which you might explain the working of the French system of nomination and examination; but if there is anything you have left out pray take it in your own way?—I was asked with regard to the French system how far they employed unpaid men, and I replied that they had a large number of unpaid attachés in their Foreign Office. With the exception of those men, all the men who come early into the regular service with the view of remaining in it come in by examination, and they stay three years in the Foreign Office. They spend their first three years in the political section, if they choose the diplomatic side, and they spend their first three years in the commercial section of the Foreign Office if they wish to begin as consuls. At the end of three years they go through another examination. That is a point of difference between the French system and our own. In France there are really three examinations for the service. Before a man goes up for examination at all he must

produce a certificate of having passed what may be called a matriculation examination of a university, or of having come out of one of the great professional schools, the École Polytechnique, and a number of other schools which are named in the order, so that he must produce a certificate showing that he has gone through a certain amount of education before he goes into the examination at all. Then there is an examination similar to our own, and after he has been three years in the office, there is a further examination. The further examination turns apparently upon the work that he has been doing in the office, but it is also an examination in commercial, and political, and public law, chiefly an examination in those subjects. After the three years, and the further examination, the men become either paid attachés in the Foreign Office, third secretaries of embassies, or vice-consuls. The age is from 21 to 30.

29,074. (*Mr. Lawson.*) Do they take those appointments indiscriminately, or have they any choice in the matter?—Yes, they have a choice, subject to the vacancies. It is like it is in our Royal Artillery or Royal Engineers—it is a choice for the best men, and virtually I believe it works out pretty well to be a choice for all the men. The men seem to take the sides in fair numerical proportions, and they know, whichever side they take, that they can always change back again later on, and probably will change back again later on, and will even change two or three times in the course of their career. The men pass an examination in commercial law after the third year as well as the general examination in international law—those being the only subjects that carry high marks—commercial law and international law—for the consuls in diplomatic history, and international law for the diplomats. Those men who go into the consular side become members of a branch of the service which has limited numbers, and is divided into classes. No French vice-consul can become a vice-consul of the first class until he has served three years in the second class; and no one can become a consul until he has served 10 years as a vice-consul, including three years as a first-class vice-consul or as a first-class chancelier. The French, as the Commission knows, have in their embassies a class of persons known as chancelliers, who are very closely connected with their consular service; they perform consular functions in connexion with the embassies as well as a large amount of routine work. The French to some extent recruit the higher branches of their consular side from the chancelliers of the embassies—the chancelliers being men who do much the same work as is done in our embassy at Paris by Mr. Atlee. There is power in France to bring men straight into the service without passing through examinations at all, but it is not exercised to a large extent. Instances could be found, however, where consuls have been jobbed into places for which they were not fit; but it is exceptional—it is severely condemned by public opinion, and the practice is not increasing, but I ought to mention that the power does exist.

29,075. (*Chairman.*) Then when once a man has gone into the consular service in the way you have described is there a free interchange?—Yes, there is a free interchange.

29,076. At his own option?—A free interchange by a joint system, of the man's own option and of the option of the minister and of the heads of the two sides of the Foreign Office. They discourage men remaining a long time in distant consulates. In order to induce the men to be willing to change they give them considerable financial advantages in connexion with their changes; they pay the whole of their passage money from the distant places and bring them home pretty frequently on leave, and they try to induce men not to settle down at consulates a very long way from home. They consider it is bad for the efficiency of the service that men should remain a very long time in distant consulates, and they accordingly discourage it; but I fancy that if a man in spite of the discouragement is extremely anxious for personal reasons to remain a long way off they sometimes leave him in a consulate for a good many years; but they discourage it.

29,077. It is a directly contrary policy to what is pursued in England, is it not?—Yes. They state that the varieties of men's tastes as regards distance from France, as regards climate, as regards interest in special questions, and in special countries, make them ask for places of their own accord in such a way as substantially to scatter their service over the whole world, very much by the wish of the men themselves. That is to say, it is not often necessary for them to put men where they do not want to be placed.

29,078. (*Mr. Lawson.*) The system works automatically?—Yes. Their consular salaries are attached to the post. As I have said before, the element of promotion hardly enters into the question of salary with them, because the salaries are calculated according to the cost of living.

29,079. (*Chairman.*) That is supposed to be the governing idea in our English system too, is it not?—Yes, it is. At the same time in the English system there are undoubtedly some consulates that are more sought after by applicants than is the case with others. There has been a change quite lately in the French Foreign Office. I said that the men coming into the office would pass three years either upon what may be called the consular and commercial side, or upon the diplomatic side; but as a matter of fact it is now two and one; that is to say, a man passes two years upon the side that he chooses, and one year upon the other side, out of his three; that is, each man passes either two years on the consular and commercial side and one on the diplomatic, or *vice versâ*. That is a recent change. There is another door into the French service. They have a special department which answers to our chief clerk's department, called Les Fonds, and they have a department which answers to our library, called Les Archives, and they have a treaty department which does not answer exactly to our treaty department, because our treaty department does a great deal more than mere formal treaty work; and their treaty department, which is a treaty department strictly so called (they term it Le Protocol), is a third separate department. Those little departments are manned rather, I think, upon that hereditary system which exists in our library in the case of the Hertslet family, which exists in the Russian Foreign Office in the case of the well-known de Martens family, and men do come into the French service through those three little departments. It is not a very important exception. The French do not employ lower division clerks. All their clerks are freely interchangeable, and there is nothing answering to lower division clerks. The Germans do employ a separate class both in their Foreign Office and in their embassies, but they are chiefly ex-non-commissioned officers in the army, men who have borne a high character in the army, and who on leaving the army have received a certificate which entitles them to employment wherever employment can be found for them, upon a curious German military system. Those men are largely employed in the Foreign Office and in the embassies. They receive small salaries. They are considered to be highly confidential men, and thoroughly to be trusted to do the confidential copying work. Of course they are not men who can do much except copying work, but they do confidential copying work.

29,080. (*Mr. Hanbury.*) Could any work of that sort be done in our service by our non-commissioned officers?—I am afraid that as a rule our non-commissioned officers are not men of quite the same stamp, and that those that are obtain lucrative employment in civil life. A really good non-commissioned officer in the British Army, I think, can get on very well in the world.

29,081. (*Mr. Lawson.*) Or in the reserve forces?—Yes. One side of the French system that is worth noticing perhaps is that they seem to have more consuls-general and fewer heads of missions than we have. They have, I think, several consuls-general and consuls in places where we have diplomatic establishments. That probably is one result of amalgamation, because there is ot the same distinction between consul and diplomatist as exists with us, and therefore the French consul can more easily be used, than an English consul upon the present system, to do what is really diplomatic work. I have mentioned a few cases in the English service where men who have come in as consular clerks, like Sir William White and Sir William Kirby Green, have become ambassadors or ministers; but such cases are of course far more common in France under a system of amalgamation. The men move backwards and forwards very freely, as may be seen by considering well-known personal cases. M. Herbette, the French ambassador at Berlin, has been a consular clerk, a a consul, a clerk in the Foreign Office, a director of the commercial side of the Foreign Office, and is now ambassador at Berlin. M. Tissot, who was a most distinguished French ambassador here, began life as an élève consul and had been most of his life a Levantine consul,

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

had gone backwards and forwards from one Levantine consulate to another. M. Jusserand, who is the second man in the French embassy here at the present time, and one of the most distinguished of their younger men, is a very remarkable instance of the same kind. M. Jusserand was here as an élève consul; he was a consular clerk here in London only about eight years ago; he then went back to the Foreign Office, and served in the Foreign Office, and he is now here with the rank of councillor of embassy. M. Mariani, who has just died, the ambassador at Rome, was most of his life in the consular department of the service, although he was part of his life in the office itself. M. Mariani came into the service through the Archives, and was six years under the Foreign Office before he ever became an élève consul; yet he died ambassador at Rome. I might mention several other cases, but M. Jusserand's case is perhaps worth noting, because it seems to show how very rapid in the French service promotion is by merit. M. Jusserand is only 35 now; he has only served altogether 14 years, including his service of three years in the Foreign Office, on first entering the service. He was first in the examination held at the end of 1876. He chose the consular side. He spent his three years in the consular direction in the Foreign Office; he then became an élève consul and served his time as an élève consul here in London. He then became a clerk in the commercial department of the Foreign Office in 1880, and in the next year, in 1881, a diplomatic despatch writer upon the diplomatic side of the Foreign Office. At the end of 1881 he was sent on a special mission to Africa. He then returned to the office and was in the protectorate department of the French Foreign Office from 1881 to 1886. He then returned to London as councillor of embassy, where he had been consular clerk only eight years previously. That is a remarkable example. The case of Baron d'Estournelles is also a remarkable one as regards exchanges.

29,082. (*Mr. Harvey.*) So that promotion was made on reports of his merits?—I have no doubt it was. I do not know that as a fact; but I have no doubt that was it.

29,083. (*Mr. Hanbury.*) Do you know what system of reports they have as to merits in the French service?—I do not know; it is always very difficult to get at that. The French circular is very like our own circular, but how far it is acted upon in practice is a matter which I can no more tell you for France than I can tell you for England. I do not know how it is acted upon here.

29,084. We have had evidence that it is not acted on at all?—It certainly is not known in the Foreign Office; it does not come to the Foreign Office, it is not known even to the heads of the Office; but what is done by the Secretary of State and his private secretaries in the matter I cannot tell. I do not know that anything is done at all.

29,085. (*Mr. Lawson.*) We have had evidence that reports are not even asked for, and that they are never sent in?—I do not know how that is, but I fancy there must be virtual reports in private letters.

29,086. (*Chairman.*) You have described this consular system in France generally. Were you able to so compare it with our own system as to be able to say whether it appears to have advantages?—I think so. I think the French service is far from perfect, because I think they, like ourselves, have more men in their embassies than they need. I think all the countries are alike in that. I think all the embassies have more men than they need, and I think that in the French service, as in our own, the work is not sufficient for the whole staff, and is really done by the men who wish to do it; but I think that amalgamation makes their service better than ours. I think that their men have a more real chance of promotion, and work with more spirit and zeal; still I am far from putting it forward as being a perfect service. I have only mentioned cases bearing on amalgamation in the one way. I ought to mention cases bearing the other way. Vicomte de Petiteville, who was formerly in the embassy in England, is now a consul, and there are many cases of that kind where men prefer to go from embassies to consulates.

29,087. One question about the consular service: having regard to the services which are done for France by her consuls, would you say that they are to any considerable extent better than the work that is done by our consuls?—I think that the French consular system gives them men who are more capable of taking all-round work than our consuls as a body are; but I should be quite unable to say that they are equally able to deal with the ordinary mercantile work. I have not sufficient experience to answer that question one way or the other. All I can say is that in the ordinary way one hears such things in travelling. I have not heard more complaint amongst French merchants and sea captains of their consuls than I have heard amongst English merchants and sea captains of our consuls. Of course such complaints are very common in all countries. I can hand in the French Budget which I think you have not before you. You have their Foreign Office, but only the Foreign Office. This book gives the whole of their diplomatic and consular budget (*handing in same*). I would suggest that it is only possible to compare the cost of the two systems if you have the whole of this budget before you, because some things appear in the Foreign Office Vote in one country which do not appear in the corresponding vote in another country, but in another part of the diplomatic or consular estimates. I would suggest to the Commission, if they wish to compare the cost of the various services of the different countries, that they ought to take our various votes—Foreign Office, consular and diplomatic, and the embassy and legation buildings votes, and having added those, and, if they like, the foreign secret service, then should add together the whole of the votes in the case of the foreign countries and then compare the totals.

29,088. (*Mr. Hanbury.*) Would that apply to the separate diplomatic establishments of any particular country?—No, it does not apply to that; it does not apply to some of the papers which I believe Sir Philip Currie put before you, but it does apply to any attempt to compare the total cost of the two services. You cannot do it unless you add all the votes together. There is only one deduction, so far as I know, which ought to be made in doing that. You ought to deduct from the French estimates their protectorates; because the French Foreign Office administers the protectorates. Tunis, for example, and all their protectorates in further India and Madagascar, in the same way in which our Foreign Office used to administer Cyprus, but we have taken Cyprus, which was the only protectorate in the Foreign Office, from the Foreign Office and put it in the Colonial Office; and our foreign and diplomatic votes are entirely free from such expenditure; whereas the French votes are largely swelled by their protectorates.

29,089. Does that include pensions, or could you tell us anything about the system of pensions?—I cannot. I know they have a system of pensions, but I cannot tell you what that system is. I could obtain information for the Commission in regard to it.

29,090. That budget you have handed in I suppose would give the total of the pensions?—I do not see it.

29,091. (*Mr. Lawson.*) Probably it is only the effective vote?—It appears to be only the effective vote.

29,092. (*Mr. Maclure.*) The pensions go in a different vote altogether, I think?—Yes, I believe so.

29,093. (*Chairman.*) Have you yourself made any comparison of the cost of the different systems?—I have attempted to do so. It appears to me that the French system is on the whole slightly more costly than ours. The salaries in the French service, especially in the high ranks, are very much smaller than ours. That is the case all through continental administration, as of course the Commission know; but on the whole their expenditure appears to me to be slightly larger than ours. With regard to the salary of the minister it has been said that secret service money is used in France for supplementing salaries. A pledge was given in this country some years ago that no portion of secret service money should applied to supplementing ordinary salaries; but no such pledge has ever been given in France, and it is said that money is found from the secret service for supplementing salaries there. It has been said that when a very large vote was given in the Exhibition year for what was called *Frais de Représentation* to the minister, I think, as much as 6,000*l.* was given to the minister at the Foreign Office for entertaining in the Exhibition year. It has been said that that, coinciding with the knocking off the estimates of the whole of the secret service votes by the French Chamber which occurred in the same year, was really intended to take the place of money which was allotted from the secret service for entertainment, but although that has been stated it has been denied, and I am entirely unable to say whether it is true or not.

29,094. Is there a large amount of secret service money voted in France?—There is 100,000*l.* for the

secret service, I think, of which 28,000*l.* a year is for the foreign secret service.

29,095. I suppose in any comparison that you have made you have included that secret service money?—Yes, I think so.

29,096. (*Mr. Hanbury.*) Are the allowances to their ministers pretty much the same as we make to our ambassadors?—It is very difficult to compare in detail. For example, I have tried to compare the cost of housing in different embassies, but it is very difficult to find out. You can find out in one case who is housed and who is not. For example in London the French house their ambassador and no one else; in Brussels they house no one, not even their minister; he has to house himself out of his salary and allowances. In some places they house the whole of their staff. In Constantinople they house the whole of their staff; not only, I think, at Therapia but also at Pera.

29,097. (*Mr. Lawson.*) And feed them?—Yes, I think they feed them, or the ambassador feeds them. So that it is very difficult to make a comparison.

29,098. (*Mr. Hanbury.*) Could you hand us in a statement so far as you know, taking the French service for instance, of the cases where they house and where they do not?—In Belgium I think you will find that the French house no one, not even their own minister; I think here they house their minister, and I believe they provide furniture for the embassy.

29,099. (*Mr. Lawson.*) At Turkey they say that the embassy houses at Pera and Therapia are provided?—That is provided for the whole staff I believe; they house everybody.

29,100. According to the return given us by Sir Philip Currie it would be the same as the London system, which, of course, it is not?—Yes, and this information is difficult to obtain, but I could obtain it. I think the best way of comparing the cost of the two services is to compare the totals. Then with regard to the German Foreign Office Sir Philip Currie, I think, has not given the details. I have worked out the details here, and I will hand those in if you like.

29,101. (*Chairman.*) The German Foreigh Office?—The German Foreign Office only; I have not been further. The total corresponds fairly well with Sir Philip Currie's figures—within 2,000*l.* or 3,000*l.*, I think. I have taken the mark at exactly a shilling, and he may not have done so.

29,102. Your total is 145,000*l.*?—For the German Foreign Office not so much as that.

29,103. The diplomatic service included?—I do not think I have included it there—I have taken the Foreign Office only—at all events I have only given details of the Foreign Office.

29,104. Were you speaking entirely of the diplomatic service?—I might add with regard to the question of habitation that at Rome the French house a portion of their staff in the Farnese Palace; they do not house the whole, they house more than the ambassador, but yet not the whole staff; so that is an example of another case again.

29,105. I suppose what you have said of the higher class in France is still more true of Germany, is it not?—Yes, I think so.

29,106. The higher salaries are lower than in England?—Yes, generally speaking, all over the Continent that is the case. In England I suppose that in order to arrive at the total cost we have the diplomatic vote, the consular vote, the buildings, and the Foreign Office vote, and I believe that comes to about 520,000*l.*, roughly speaking. I have not added my figures very carefully, and I do not know whether the Commission have the figures before them, but I make it about 520,000*l.* roughly. The French total service, according to that budget, and deducting the protectorates appears to me to work out at between 540,000*l.* and 550,000*l.*, slightly more than our own.

29,107. Have you worked out at all what is the difference between the cost of the consular service of France and our own?—It is difficult because consular and diplomatic services are so much mixed up together. For instance, our consul-general at Warsaw used always to be a person who was really a diplomatist, but who was called consul-general in order not to offend Russian susceptibilities. That was the case even when Poland had home rule. So again the French have replaced in many spots in Germany legations by consulates; but the work done is precisely the same by the consul that was done by the legation. Therefore it seems to me almost impossible to really compare consular system with consular system and diplomatic system with diplomatic. The names are used indiscriminately. For instance, in Egypt people are called consuls-general, but of course their functions are purely diplomatic.

29,108. How would the comparison stand between the number of posts at which we should require commercial consuls as compared with France?—I should think that we naturally, through the great mass of our trade, ought to have more consulates than the French.

29,109. So that would be a material element in the comparative cost of the two systems?—No doubt.

29,110. (*Mr. Maclure.*) Have not the French many unpaid vice-consuls?—No, I think they have not. Consular agents only. Their vice-consuls are paid.

29,111. We have a large number?—Yes, we have a very large number.

29,112. (*Mr. Harvey.*) If the total cost be more and the individual salaries be small is the excess of cost over the charge of our service owing to the larger number of men employed?—I am not certain how far they can be said to employ a larger number of men. I should say generally speaking that the chief difference was in their lower salaries being larger than ours. Their highest salaries are much smaller than ours, but I think their salaries about two thirds of the way down the scale in their diplomatic and consular service are larger than our average salaries. Of course there is a reason which I need hardly state for English salaries being higher in the higher offices than the French, although it does not account for the whole difference of the scale, which is, that the schooling of children for example is very much higher in England than it is upon the Continent; a French ambassador will send his children to a lycée, and a German ambassador will send his children to a gymnasium, where the expenditure need not be more than a third or fourth of what the cost of a boy at an English public school is.

29,113. (*Chairman.*) Then there is to be taken into consideration also I presume the scale of salaries all round in England as compared with foreign countries?—Yes. The German Secretary of State receives 2,000*l.* a year, but then of course the Chancellor of the Empire to some extent performs the duties which are performed here by the Secretary of State. The Secretary of State in Germany is not quite so important a person as the Secretary of State for Foreign Affairs is here.

29,114. (*Mr. Hanbury.*) Comparing the case of an English ambassador in Paris with, we will say, the German ambassador, would your main reason for making the English ambassador's salary so much higher be that the whole scale of our Civil Service at home was higher?—The enormous difference between English and Continental salaries is not anything like so observable, I take it in the case of ambassadors as it is in the case of ministers or of heads of departments. The two head men in the French Foreign Office after the minister receive only 22,000 and 20,000 francs a year respectively, the commercial and consular director receives 22,000; the political director receives 20,000; and these are the only two large salaries paid in the office after the minister's. The minister's and these two salaries are of course extraordinarily small as compared with our biggest salaries, but there is not anything like the same difference I think between the salaries of the French ambassadors and of our ambassadors as there is in that case.

29,115. I think there is?—Nothing like the same disproportion.

29,116. Nothing like the same extent?—No.

29,117. I want to know why, for instance, England should pay an ambassador, we will say in Paris so much more than Germany should pay?—The German ambassador, of course, does not entertain much in Paris, for special reasons.

29,118. Take Italy then?—I cannot see any very great reason why our salaries should be so very much higher than the Italian salaries in Paris. I gave the cost of the education of children as being one example of a reason, but of course it would not account for any great, any enormous difference.

29,119. You know of no other reasons?—I have not thought of any at this moment.

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

29,120. (*Chairman.*) Is it or is it not the case that the principal representatives of France, Germany, and Russia abroad, are, as a rule, much richer men than the English representatives?—I do not think that on the average the French ambassadors are men of so much wealth as the average of the English ambassadors. Certainly some of the French ambassadors have been very poor men indeed. M. Tissot was a man who had never saved anything from his consular salaries. M. Mariani, who died at Rome the other day, was a poor man, and many of their ambassadors are quite poor men. The Germans have employed men of wealth undoubtedly, and with regard to the Russians some of their men are do doubt men of great wealth.

29,121. (*Lord Basing.*) Would you admit that the difference in the salaries of high diplomatic officials in England as contrasted with other countries is out of proportion to the salaries paid to high officials in the civil service or the military and naval services in those countries?—No, our salaries are high all round.

29,122. There is nothing special?—On the contrary I was rather arguing with regard to the ambassadors that the difference was less than the average difference. There is one French economy, as compared with our expenditure, which I should like to mention. Perhaps I should not say economy, because the total cost of their service is as great as the total cost of the corresponding service with ourselves, but they get a great deal more for their money; it is economy in that sense. I mean their messenger service. The French and Germans each spend roughly speaking, I think, upon their messengers about the same sum that we spend upon our messengers, but they get a great deal more for their money. If you were to compare the number of messengers, and the journeys that the messengers make, I think you would find that the French and Germans get more for their money than we do. Although the total expenditure is as large with the French and Germans as with ourselves, the salaries are very much smaller.

29,123. (*Lord Lingen.*) Are the men of the same rank?—No, they are thoroughly confidential and trustworthy men, but they are not gentlemen.

29,124. (*Chairman.*) Do you make a suggestion that there might be an alteration in our system?—I sent a memorandum round when I was at the Foreign Office, which was not acted upon, and I should like to make the same suggestion here. I suggested that it would be possible gradually to fill the Queen's messenger service with thoroughly confidential men most carefully chosen, but who would not receive salaries on the scale of those paid at the present time.

29,125. Do you think that there is room for using Queen's messengers to a larger extent than they have been used?—Yes, I do not think it in the least safe to abolish the Queen's messenger service; and one reason why I am most anxious, because, of course, the sum involved is not large enough to make it worth great anxiety as a mere matter of money—one reason why I am most anxious to change the system is because I am certain the House of Commons will abolish it if it is not modified. If the House of Commons have reason to think that the messenger service is occasionally used as a home for men who are not chosen simply because they are the best men possible to do the work, I am sure that sooner or later the House of Commons, which does not like the service and does not quite understand the necessity for it, will throw out the vote. Therefore as I believe it is necessary for the public service to maintain a Queen's messenger staff, I am very anxious to see it reformed.

29,126. Perhaps you will state one of the principal reasons which induce you to attach so much importance to retaining a messenger service?—Because all Governments open letters; you cannot trust your bags and you cannot trust your secret despatches to the post.

29,127. (*Mr. Hanbury.*) Your telegrams have to be trusted to the post?—They are in cypher; and a foreign government can make nothing of them.

29,128. Could not letters be written in cypher also?—Yes, certainly, but it costs more than to send men, I think. Cyphering is a terribly slow process. I am one of the unfortunate people who have had to do it. It so happened whilst I was employed on the commercial negotiations in France that there was a change of ministry in France, and we were unable to carry on negotiations for a month, and I went to a place which I have in the south of France for a month and had to do my own cyphering while I was there; so I know what it is.

29,129. (*Chairman.*) What class of men do you contemplate might be employed as messengers?—I should think it might be possible to find non-commissioned officers of thoroughly good character. I think you must take teetotallers. There is a good deal of temptation in heavy travelling. The men get no proper meals, and if they are given to drink at all, they are certain to become drunkards. At the present moment in order to try and save money the Foreign Office have been running down the messenger service dangerously, I think as regards the number of messengers sent. I believe that at the present moment the bag is carried between Calais and Paris by a facteur of the embassy in Paris who is very well known to everybody in the Foreign Office—a facteur who is known as Louis. He is a perfectly confidential person, but he is a French subject; and I do not think that the employment of a French subject to carry that bag can be defended. Certainly, as regards any successor that Louis might have, I should feel most anxious with regard to the safety of that bag. You would never know whether your bag had been opened. The seals could be imitated, the bag would arrive intact, the despatches would not be taken away, but they would be read; they would be read upon the road and copied.

29,130. (*Mr. Hanbury.*) Are there any other cases of that kind?—I do not know of any other; but I think you will find that Foreign Governments spend as much money on their messenger staff as we do; and in addition to that they largely employ attachés in supplementing it. The French and the Russian Governments I know send attachés backwards and forwards from London to Paris continually. The Russians have men crossing several times a week, attachés from London or from Paris, as the case may be, and carrying bags each way, in addition to their Feld-Jaeger service. I think you will find that they trust the post less than we do, but on the other hand, they do not pay salaries of 400*l.* a year to persons for carryings bags.

29,131. What do they pay, do you know?—About 100*l.*, I think, or 120*l.*

29,132. (*Chairman.*) Do you think there is any necessity at all for maintaining Queen's messengers at the present rate of pay?—No, saving existing interests.

29,133. Is there any function which they discharge which is of a character that demands a high rate of pay?—None. Except to save existing interests I can see no sort of reason for maintaining the present rate of pay. I think you might obtain perfectly confidential men at comparatively low rates of pay; but of course the greatest possible care ought to be taken in the selection of those men, and they ought to be ruthlessly dismissed, would almost say upon the slightest suspicion; because you cannot afford to have men whom you cannot thoroughly trust. I may give a reason for this. I know the House of Commons are inclined to think that the Foreign Office exaggerate the necessity for secrecy, but there is an institution known as the Cabinet Print. I have often protested against that print existing at all, it is so dangerous. Almost everything, almost the very most confidential and secret documents of all, are printed in that print. Occasionally something of immense importance is kept out of it because of the danger, but that is very rarely done, and as a rule on all the days of the year but one or two everything of the most secret kind is printed for the use of the Cabinet, and is also sent to the Embassies; it is horribly dangerous, and I think it would be desirable not to have that print at all; but if it exists, as it has now existed for many years, it is a thing which foreign governments would be very glad to get hold of from day to day, and which certainly, if they do not get it already, they will try to get if your system helps them.

29,134. (*Mr. Hanbury.*) I do not quite understand; is this an objection to having a printing office?—No, nothing is ever got out from the printing office; the Foreign Office printing office is perfectly to be trusted.

29,135. (*Mr. Harvey.*) So far as we are concerned your point here is that those things if continued should never be sent by post, but should always go by messengers?—Certainly; and ought to go by a messenger whom you can thoroughly trust, and not by a foreign subject.

29,136. (*Mr. Maclure.*) I understand that you would not abolish Foreign Office messengers, but you say that

our salaries are higher, which of course we know they are. Do the Russian messengers travel as much as ours, and are they in as continuous employment; they are not, I think?—My impression is that they travel more.

29,137. The complaint of the Foreign Office messengers is this, that they are perpetually on the move?—My impression is that you will find the others travel more. If you notice the figures in the Russian and the German estimates you will find that the salaries are very much lower, but that the costs of the service is as high; that looks as though they travelled more. Certainly no one can travel more than a Russian "courier," I think; he is the ideal of a traveller.

29,138. (*Chairman.*) Your evidence points to this, that in the case of these Foreign Office messengers it is very desirable to take great care in appointing the men?—Yes.

29,139. With reference to some of our own home messengers, do you think that there might be more care exercised?—Yes. If you choose, for foreign service messengers, to have men of a certain class whose social standing would give you more knowledge of them than perhaps with regard to others such as I have suggested, you might get even those at a very much lower scale of pay than you pay at the present time. For example, if you were to adopt a plan which I proposed when I was at the Foreign Office, and which was not accepted, you would get men at a much lower scale of pay. Throw it open to officers of the Army and Navy, retired officers of certain ages, men who had happened to retire young for one reason or another, who could produce very high certificates of character and conduct, temperance and sobriety. Throw it open to those men, and have an examination, say in French and German, for it—some simple examination in the colloquial knowledge of French and German—and let it be fought for among those men. You would get any number of candidates at a lower scale of pay than the present rate. It is at the present moment a matter of great patronage—it is very much sought after.

29,140. (*Mr. Lawson.*) For half-pay officers?—Yes, certainly. As I say, at the present moment these posts are sought after; they are looked upon as very desirable billets.

29,141. (*Chairman.*) Leaving that point, perhaps we might come to the question of the staff of the Foreign Office and the extended use of the clerks of the second division, or what has been hitherto called the lower division?—Given the fact that I myself am opposed to the existence of several classes of clerks in one office, and cannot see how that system can be expected to last, and accepting its existence as a fact, if there are to be two classes of clerks, or let us say more than one class of clerks in the Foreign Office, I am of opinion that lower division clerks could be more largely employed than they are at the present time. I should imagine that about one-third of the work done in the political departments of the office is non-confidential work, and that it is capable of being easily separated from the confidential work. About a third of the time of the clerks in the office, and even in the smallest departments something like the whole time of one man in each department is taken up upon non-confidential matters, which I shall ask your leave to describe. Take, for example, the appointment of foreign consuls in the British Empire, the attesting the certificates of births and deaths, and obtaining information from Somerset House as to persons who have died or inherited money, and so forth, procuring facilities for travellers, giving letters of introduction, answering letters about letters of introduction, and forwarding information to other persons. The last is a most important item. A great number of things arrive from abroad which have to be sent, some to the Geographical Society, some to the Palestine Exploration Fund, some to a department of the Government other than the Foreign Office. Then there is obtaining facts for foreign governments. Foreign governments are continually writing, saying, We are proposing legislation upon such and such a subject, can you give us any information as to the condition of your own laws upon the subject. That involves a letter to the Home Office or a letter to the Local Government Board, and so forth; and then another letter when the information comes back. All this non-confidential work at present done in the various political departments might easily, I think, be picked out by Mr. Villiers when he opens the letters. I can see no reason why when he sorts the letters under the various departments and sends them to the departments he should not pick out all the non-confidential work which is of this description—that is strictly non-confidential, and not even mixed up with confidential work—and should not send all that to a non-confidential department manned entirely by lower division clerks, or what I think Lord Lingen would probably call a copying room; but whatever name it is called by, to a non-confidential section of the political departments. When a foreign consul is to be appointed in the British Empire, a foreign government writes proposing a particular person. If it is for a home appointment, the Foreign Office has to write to the Home Office about it; if it concerns a colony, to the Colonial Office; if India, to the India Office. There are two replies from the office written to, a preliminary reply saying they will ask for the information and find out, and then a further reply saying that they have asked for the information and found out. Each of these replies has to be communicated, or the substance of it sent to the Foreign Government which has asked the question, and I believe that on an average in every case of the appointment of a consul there are four letters each way, four letters in and four letters out. The men at the head of the office do not as a rule know much about this kind of work, because it never reaches the secretaries—it never goes beyond the head of the department. The head of the department looks at the draft, and initials the draft, but it never goes beyond him—never goes up to a secretary. There is an enormous amount of this non-confidential work. Certificates of births and deaths are continually applied for in connexion with wills, or with the death of intestate persons—foreign governments having aided some person in trying to find out facts with regard to persons from whom he may receive successions. There is a great deal of forwarding work, sending things to other departments and to learned societies. Of course you cannot say that all forwarding work should be dealt with as non-confidential, indeed some forwarding work may be highly confidential, for example, forwarding the reports of military attachés to the War Office, or the reports of the naval attaché to Admiralty, but Mr. Villiers, or whoever opens the letters in the absence of Mr. Villiers, could pick those out without any increase of labour, because he has to look at every document at the present time to see what department it should go to, and it would not increase his work for him to see whether it was confidential or not. Letters of introduction I have already mentioned, I think. There is a large class of letters besides the ordinary letters of introduction, such as letters to obtain facilities—letters for merchants in China, Japan, and Siam, and the further East, generally asking the consuls to give them facilities, and letters for travellers who desire to study particular institutions; a gentleman going to the United States who wished to be put into relation with the Labour Bureau, a gentleman going to Germany who desires to study the German system of education, and so forth; such letters are largely given. Then I have also mentioned the inquiries of foreign governments as to legislation and institutions in this country. These present a little difficulty because they are very often verbal. A foreign minister, or a first secretary, or secretary of embassy, will come to the Foreign Office, and will see the head of the commercial department, or he will see the Under Secretary of State for Foreign Affairs—the Parliamentary Under Secretary—and he will, in the course of conversation with him, express a desire for information with regard to particular institutions existing in this country. But even that, I think, might easily be dealt with in the non-confidential room, because the gentleman to whom the request is made might easily make a little memorandum of it, and send it down to the non-confidential room, to be there dealt with. There is an answer to what I have just said. The answer is that in ordinary times, when there is no great pressure of work upon the office, the men who do these things, if they did not do them, would have nothing else to do. These things can be delayed; they can be put aside when a great pressure of work comes in, and to some extent it is true that if you have a non-confidential room manned entirely by lower division clerks doing this non-confidential work, the regular staff of the office would sometimes be sitting twirling their thumbs; that is true. It is for the Commission to weigh the advantage and the disadvantage of the two systems. You must have the Foreign Office over-manned for its daily ordinary work because the pressure of work comes so very suddenly upon the office that there is no time to bring in a staff from abroad. You may have the office

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

quiet, especially certain departments, quite quiet in the morning, and by 7 o'clock in the same evening they will be in full swing, with more work than they can possibly get through, and all this non-confidential work falls heavily into arrears in consequence. That in itself increases the work because great numbers of people write to complain that their letters have not been answered. Of course work of this sort must be put aside when confidential work of importance comes in. I have stated my suggestion, and I have stated the difficulty in the way, but on the whole I think it would be desirable if you have two classes of clerks at all that there should be a non-confidential room in which this work should be done by lower division men. In connexion with the work of the lower division clerks were you going to ask me anything about the question of secrecy.

29,142. We should be glad to hear your opinion upon that?—Of course there is the general question of lower division clerks and secrecy. I speak with a good deal of hesitation upon this point, because I think that the employment of lower division clerks in the office has slightly increased since my time, and the rooms in which they work may not be the same as those in which they worked when I was there, and generally changes may have been made with which I am not thoroughly acquainted, but I rather doubt whether it is either practical or convenient to carry out the idea of attaching lower division clerks to departments and making them work in separate rooms in connexion with the department. It involves an enormous number of small rooms, and it is very difficult to prevent men coming backwards and forwards into the room. In the treaty department I believe there is a lower division clerk who in practice, although not in theory, does work in the same room with the other men; he has a separate room, but I believe as a fact he works in the same room as the other men. Now the work in the treaty department is highly confidential. Our treaty department is not like the foreign treaty departments, not like the foreign Protocol, it does not do formal work alone. Our treaty department also takes in addition to the formal treaty work all work that grows out of treaties. Now the Commission will see at once that some of the most confidential work in the office grows out of treaties. Take Newfoundland, take the American Fisheries, take the late trouble with Portugal, all those matters and several others which I might name of the most difficult and dangerous questions that we have, in some sense, grow out of treaties. I believe that Sir Philip Currie has since he has been at the head of the office seen the difficulty of the present admixture of the different kinds of work in the treaty department, and has taken out of the treaty department from time to time very important questions as they grew to be important. I fancy, although I am not sure of this, that he took the fisheries question out of the treaty department and restored it to its natural department, the American department. But continually these confidential questions spring up in the treaty department. Take Samoa, for example. If there should be, as there probably will be, further trouble sooner or later in Samoa, it will naturally be dealt with in the treaty department because it will grow out of a treaty.

29,143. (*Mr. Harvey.*) We have it in evidence that after four or five years lower division clerks may see confidential papers in the librarian's department?—In the librarian's department, yes. The librarian's department is highly confidential, that is to say, although as a rule the confidential work which they would see would not be of a character very attractive or very important to foreign governments, it would be very valuable in many cases to newspapers, it would be what the newspapers would call very good copy. Any intelligent man employed in the library, if he wished to commit a breach of confidence, might in the course of his work make notes, which would be valuable for sale to newspapers undoubtedly, and of course the more you make rules that particular classes of clerks are not to see confidential matters, the more you show a distrust of them that one would think would tend to prevent their having the same high sense of honour that they would have if you trusted them freely.

29,144. (*Chairman.*) Are there any economies you could suggest in the office. What do you say about the question of its being over-manned?—I do not think that the Foreign Office is over-manned. It certainly is not sufficiently manned always to be able to keep pace with its work even by working long hours and by working hard. The impression that the Foreign Office is not a working department, which is caused by the lateness of the hour in the morning at which it begins work is hardly true. There are one or two men in the office who have never done their fair share of the work; but taking the average of the office through, I think it is a hard-working department. They certainly work late in the evening and they work fast and hard.

29,145. The hours of course must be different from other offices?—The hours are peculiar hours, which is largely caused by the fact of the Secretary of State being a member of the Upper House; he does the bulk of his work when he comes back from the House of Lords.

29,146. I suppose a good part of his afternoon is spent in seeing the ambassadors?—Yes, that of course is an enormous waste of time.

29,147. Will you please go on?—As regards the lower division clerks I have views which I should be prepared to state to the Commission if they want to hear them, but I am modest about them. I have no wish to press them upon the Commission at all. I do not think that they are views that other people share, and I do not know that they are very specially applicable to the question of the Foreign Office.

29,148. I am sorry that we had not had the advantage of hearing you before on that subject.—I almost hesitate to give them, because I feel that they are somewhat crude, and that men with the experience of Lord Lingen will see weak points in them which I ought to have seen myself.

29,149. (*Mr. Hanbury.*) Why is it assumed that these lower division clerks are not to be treated with the same confidence as other clerks are to be treated?—I myself have already said that I think the Foreign Office is very exceptional, because it is the only office except the Admiralty, in the case of this country, and the War Office, in the case of other countries, where the army is more important than it is here—in which foreign governments would be likely to plant men for the purpose of obtaining information. That I think makes it very special, and makes the whole mode of entrance to it important from the point of view of secrecy; but, speaking generally, I should agree with what I feel to be the belief of the Commissioner who speaks to me that it is very undesirable to set up these artificial rules with regard to secrecy as between one class and another class of clerks.

29,150. You have stated in evidence, for instance, that the highly important work of the messengers who carry these very confidential documents is done by a class of men in the German service who, if anything, are rather below the lower division clerks?—Yes; the Germans from their very large army, and from their very strict discipline, and from the very general spread of education in Germany, and the high character of their population, are particularly lucky in being able to find a great class of what you may call the non-commissioned officer type, which is rather wanting in other countries. It is not so easy to find them in other countries as it is in Germany; for instance, supposing the Russians wanted to set up a similar system, I think they would have a very great difficulty in doing so. They have, some difficulty in recruiting from Russians their Feld-Jaeger messengers. The Germans are happily placed as regards finding confidential men not technically gentlemen.

29,151. (*Chairman.*) I have asked you about the over-manning of the office, and I think you have pretty well explained that. I am not sure whether there is any other point which you would like to mention?—There is one matter which I should like to mention as regards the office which I might mention here, because it is rather connected with the idea of establishing a separate non-confidential division of the political side. It has been suggested I think by various Foreign Office reformers to establish a separate political room at the other end of the scale, that is to say, an upper separate room which has been called an intelligence department. I should like to say that I am somewhat opposed to that idea. I fear that while the ablest among the younger men are in favour of it, it would lead to the ablest among the younger men concentrating all the real work in the office into the hands of a very small number of men, and making the dreary monotony of the work of the other men more distressing than it is. As regards the past, as regards documents, the library of course is and must continue to be that intelligence department; but as regards the actual work of the moment I should fear

that the creation of anything like an intelligence department would be likely to cause a grabbing of the most important and the best work by the men in it to the detriment of the office as a whole. Of course it depends upon what you mean by an intelligence department, but I am a little afraid of the suggestion.

29,152. I do not think the suggestion has been made to us as far as I can remember?—I have heard it made, but I do not know whether it has been made here or not; I know it is a favourite idea with some of the very ablest of the young men in the office.

29,153. (*Mr. Lawson.*) The idea is to have an intelligence department something akin to that at the War Office, is it not?—Yes. Of course in any foreign office it must be the case that there are only four or five men with a real general knowledge of foreign affairs and a keen interest in them. Other men may take an interest in the particular branch of work which they are doing, but there will be naturally a very small number of men who take a general interest and who really are generally competent all round; and it is a very natural thing that those men should want to get hold of all the best work in the office, but I am not sure that it would be a good thing for the office that they should.

29,154. It would be establishing another artificial barrier really inside the office itself?—Yes; I am afraid so. I should rather look for the same good results from the system of amalgamation, or from steps in the direction of amalgamation, by bringing men backwards and forwards, and giving them a more varied experience of the different forms of work, and especially by absolute regard to merit in promotion. I think that it would be important to have in view the promotion in the office and among the consulates as a reward of merit; that is to say, that we should have less regard to seniority in the service, and more regard to merit than is the case at the present time.

29,155. (*Chairman.*) Within the office itself as well as outside the office?—Both in the office and outside. I think it is easier to promote a man for merit in the office to a good place outside, or a man for merit outside to a good place in the office, than it is to promote him in the office, or outside as the case may be; that is to say in the one case you more distinctly appear to put him over the heads of men of his own standing than you do in the other.

29,156. That is an additional reason in favour of what you suggest?—In favour of amalgamation. Yes.

29,157. (*Mr. Hanbury.*) How would you propose to find out his merit if he is abroad?—I think the men are pretty well known. I think the head of an office like Sir Philip Currie, or Sir Julian Pauncefote before him, or Lord Tenterden before him, pretty well knew the merits of all the men in the service. It is a service in which naturally from its character there is a great deal of gossip and men's merits are very well known. I think you may say generally that in the Foreign Office and the diplomatic service—not so much in the consular service—almost every man knows the merits of almost every other man in the service.

29,158. (*Chairman.*) Are there any other points which suggest themselves upon which you would like to say anything?—There are some points which are of interest and importance in connexion with the office, but they are a little off the lines of this Commission. I think, for instance, with regard to the character of the work in embassies and in the Foreign Office, and the amount of work that there is to do, the fact that the most important work is very often contained in the private letters of ambassadors is certainly detrimental to the efficiency of the service, although it may possess advantages from the point of view of the Foreign Secretary. As a matter of fact, ambassadors put their most important things into their private letters. Some ambassadors write very few private letters, other ambassadors write an enormous number of private letters. The late Lord Lyons, who was from some points of view a model ambassador, from the punctuality and regularity with which he discharged his duties, and the immense amount of ability and energy which he brought to bear upon them—Lord Lyons was, perhaps, from that point of view, not so useful to the service, because in his case he carried on his work chiefly by private letters written in his own hand. Those letters never came into the office, never came into the embassy; no record was kept of them, they were the property of the Secretary of State for the time being to whom they were addressed. That system is detrimental to the efficiency of the Foreign Office and of the embassies, but the question is rather off the lines of this Commission.

29,159. (*Mr. Harvey.*) Is there any office rule upon the point?—There is no rule. You cannot insist on an ambassador writing a given number of despatches; you cannot insist on his not writing a given number of private letters. I do not see how you can make a rule. Of course, private letters, when it is necessary to lay them before Parliament, are turned into despatches; that is to say, by the order of the Secretary of State they are treated as despatches, and become despatches, and are bound and registered in the office.

29,160. (*Chairman.*) Do you think it possible to make any suggestion which might tend to improve that?—I do not know; we can only hope that Secretaries of State may have the patriotism to discourage a practice which is convenient to themselves.

29,161. (*Mr. Harvey.*) If in laying before Parliament a long correspondence it should be found that the correspondence is practically incomprehensible without the insertion therein of certain letters which are the private property of the Secretary of State, I suppose then they are at once put in?—Yes, they are turned into despatches and numbered as despatches by the leave both of the Secretary of State and of the ambassador. The Secretary of State or his private secretary writes to the ambassador and says, I want to make your letter of such and such a date into a despatch, and then the ambassador says, I have not the slightest objection, only I must see a proof of it.

29,162. (*Mr. Lawson.*) I suppose they are what we may call formalised, they are put into shape?—If necessary.

29,163. Because the papers we see in Parliament are all in one form?—Yes, if necessary they would alter it to "My Lord," and so on.

29,164. You could not of course draw up a regulation upon that for an ambassador?—No.

29,165. But as touching the embassy itself it must have a prejudicial effect?—Yes, it has, because men do not know what is going on.

29,166. (*Lord Lingen.*) I think I understood that the basis of all the evidence which you have given to the Commission rested upon this, that you think the Foreign Office, the diplomatic service, and the consular service, should be amalgamated?—Yes.

29,167. And that as part of that amalgamation you would say that the Foreign Office differs from the rest of the Civil Service?—Yes.

29,168. Then accepting that as your opinion, I understood you also to say this that in the Foreign Office (we need not go into the rest of the Civil Service), if it could be so brought about you would prefer to have one class of clerks and not more than one?—Yes.

29,169. And that class of clerks would be, I presume, on the whole the sort of clerk that you have in the political departments of the Foreign Office?—Yes, I ought I think to explain that my view in favour of one class of clerk does as a fact, although you have not so asked me, extend to all the offices. I would only have one class of clerk in each office.

29,170. I think I should like at present for our purpose to consider the Foreign Office only, that being according to your evidence from its connexion with the diplomatic and the consular services on a somewhat different footing to the rest of the departments. Now take the chief clerk's department, which deals with accounts, and the treaty department, which deals very largely with records, and the librarian's department, which only deals with papers of a certain date not of immediate interest, would you apply your system to all those divisions?—I have already pointed out that unless the treaty department should be altered to be a mere treaty department, it is really a political and confidential department which ought to rank in nature with the other political departments by the practice of its work, but as regards the library and the chief clerk's department and the treaty department itself (if it were confined to mere treaty work) I am quite of opinion that it would be possible to treat them as separate offices with a different staff of clerks altogether.

29,171. And by treating them as separate offices, would you mean a cheaper order of clerk?—I think that it is possible to have a cheaper order of clerk, although I myself dislike the orders. There is one reason which tells against orders which I think ought

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890

to be borne in mind. A man who is in this chief clerk's department, or in the library or in the treaty department, and who belongs to this cheaper order of clerk, may show great ability there; he may be employed in practice in some other department; it has happened before; there is a gentleman in the Foreign Office at the present time, Mr. Maycock, who I think comes from one of those departments and who has served nearly the whole of his time in the political departments of the office. I think, as it has occurred before, it will occur again. Then you find those artificial rules as to the grade of the service to which they belong standing in the way of a man's promotion, making it difficult to put him over the heads of other men.

29,172. If you had one order of clerk with the class of clerks that are in the political department—I think the witnesses that we have had before us have suggested this—that it would be a very great advantage for a clerk at home or who was going abroad to be in positions where he would have to take a great many resolutions for himself, and that it would make him a much more competent official if he had been passed through the chief clerk's department, and passed through the library. We have always been met with this objection, that in these auxiliary departments everything that you want is experience, and it would not do to pass men through them only for a short time. Do you think that is a well-founded objection?—I think there may be something in it. The French, who have the amalgamated system, as I have pointed out, kept their fonds and archives and protocol, that is their chief clerk's department, their library, and their treaty department, separate from the rest of their office, and the amalgamation in that case concerns rather the chancelleries and the consulates than the diplomatic service.

29,173. Without pressing that point further, leaving those departments, like the chief clerk's and the library, aside, and coming to the clerks in the political department, is there not a great deal of copying in that department, which is now given to those clerks to do. By copying, I mean not only copying enclosures, but when a minute has been settled, and the draft of a letter by the principal officers writing that letter with their own hands before it goes out of the department. It is perfectly true that two or three years of that sort of work makes the junior a much more competent person; he becomes familiar with official forms, he has all the current business of the office going through his hands; but in the Civil Service the promotion being somewhat slow, if you keep a youngster from for six, seven, eight, nine, or ten years at that sort of work, you have taken all initiative out of him whatever; at least that is my experience?—I quite agree.

29,174. Now, how would you meet that if you have only one class of clerk, because the promotion will leave a great many of these men doing strictly copying work?—I repeat, if you are to have two classes of clerks, and I presume that—although that is not my personal view, that is the view taken by the great majority of more competent people who have considered this question—if you are to have two classes of clerks, I am distinctly of opinion that you can do a great deal of this non-confidential work by lower division clerks in the Foreign Office.

29,175. I should rather like to take your opinion that we are to have one class of clerks; then how should you deal with this question, that for the sake of the future of the office we are rather injuring our future senior officers by keeping them so long on this lower class of work?—I am afraid that it is a weak point in the system of a single class of clerk, and that it is useless to disguise the fact that that is a weak point in the system. I should answer myself that I would promote by merit the men who showed that they were likely to be the men to rise to the higher ranks. I would promote them rather rapidly. Of course there are drawbacks in that course, and I perfectly see those drawbacks. I may say that the difficulty of spoiling the men by keeping them at this A B C work in the Foreign Office and the diplomatic service is carried very far indeed. Men spend, I am sorry to say, 20 years, and even 25 years, of their lives doing this A B C work.

29,176. What would you say of the men at the end of those long periods?—It is very bad for them.

29,177. I will not dwell further on that point. Are you satisfied with the terms of admission into the Foreign Office?—Yes, I think so. Do you mean as regards the examination?

29,178. What I particularly want is your opinion as to the element of competition?—I have said that I am opposed to open competition for the Foreign Office. I believe that foreign governments would make use of it for the purpose of planting men upon the office; that the examination in the case of the Foreign Office must be in foreign languages; and that you would have men of mixed parentage and of foreign education, of whom you would know nothing, planted upon you, and that you could not trust them.

29,179. But accepting the principle of limited competition, you would still be in favour of competition?—Yes.

29,180. The competitors having been duly selected?—Certainly. I should hope that Secretaries of State would take a very non-personal view of their patronage in connexion with the office; that is to say that they would less and less as years go by use it as private patronage, and more and more use it as trustees for the public for the purpose of getting the best men.

29,181. Another point, as to the difference between ambassadors and ministers. If we take the case of Washington and Paris, where you have got republics, is there anything that an ambassador in Paris or in Washington could do now which a minister could not do, or would it be simply a compliment to the United States to give them an ambassador?—It would be a compliment, and it would also, and I attach more importance to the second argument, enable you to get your best men from your whole service for Washington apart from any difficulty caused by its being what is called an inferior post. You could not at the present time easily expect that a man who had been say ambassador at any European capital, should consent to go afterwards as minister to Washington.

29,182. Would it make any difference to his pension whether he was ambassador or minister?—I believe it would, but I am not certain of that. Apart from pension, apart even from salary, there are few men big enough, of course there are some men big enough, to be able, having been an ambassador, to become a minister. It takes a very big man to say, "Oh, I do "not care a bit."

29,183. We had from one of the witnesses before us a good deal of evidence about the use of consuls on the commercial side, and I think I may say the gist of that evidence was that the Germans attended much more to the commercial side of the consular service, and took much more pains to make it efficient on that side than we do; have you any view on that subject?—I have no personal knowledge. I have a good deal of hearsay knowledge of it, I very often heard it said by persons whom I should be inclined to trust, but as I say I have no real knowledge of my own.

29,184. The French consul, I rather gather from your evidence, from the very fact that he was constituted a part of the foreign service is more a diplomatic than a commercial person, is he not?—He may be in more cases diplomatic than commercial than he is with us; but still of course there are a great number of French consulates where the consul is purely commercial.

29,185. Do they make reports on the commerce of the country in which they are situated, as our consuls do?—I have not seen them published. I know they make such reports, but I do not think they are published with the same liberality. What is done I think is to send these reports to chambers of commerce, I think they are handed round to chambers of commerce rather than published.

29,186. The witness that I am referring to dwelt very much upon this fact, that our consuls very often did not know the language of the country in which they were employed, sufficiently for the duties of their office, it was pointed out to him that a native and unpaid consul who is allowed himself to trade has at any rate the advantage of knowing the trade of the country and of knowing the language. What do you think of that class of person for us—the unpaid local trader who is also a consul?—There are some places where he can be very usefully employed, but of course the danger is of the position being used for advertising purposes by one man to the detriment of his competitors, and of your Queen's Commission being made use of really in trade.

29,187. If you had a practically free hand, would you retain that class of unpaid local traders for vice-consuls?—I would sooner give salaries, and have competent men. Apart from the question of whether I could afford to do it I would sooner have the paid men,

but of course I must cut my garments according to my cloth; it would be a question of cost.

29,188. (*Mr. Lawson.*) Dealing with the Foreign Office for a moment in answer to Lord Lingen expressing your views as to the solidarity of the department, do you not see that there is a great difficulty in keeping the second division clerks in that office, without any hope of rising to the first division, or of doing a higher class of work, and that it is likely to affect the service prejudicially?—I think it must be so; it is very strongly my opinion that that must be so in all the offices.

29,189. You are aware that we have recommended that the bar should be done away with in the case of the other departments?—Yes; but so long as you have two names and two scales of pay, and two modes of entrance, there will be a bar I am afraid.

29,190. But still there will be the hope of promotion?—Yes.

29,191. In the Foreign Office there will be none?—Yes.

29,192. Therefore, whilst everybody can see the difficulty and the harm that will be done by keeping the diplomatic clerks to the routine work for so many years a good deal of harm might also be done by keeping the lower division clerks to it in the same way?—Yes.

29,193. Supposing that we are obliged to retain these two classes, I presume that you are not in favour of having the third class which you find in the Foreign Office?—No; I think it is a needless complication.

29,194. At any rate it is a mistake, as their entrance is now by limited competition, to cast a slur upon them, as is done at the present moment by debarring them from doing higher work?—Certainly. But I believe at the present moment the difficulty has sometimes been met by promoting them in the diplomatic service occasionally.

29,195. By transfer?—Merely nominally.

29,196. According to your view by the present system of examination for the diplomatic establishment of the Foreign Office you get a sufficiently good class of men?—Yes.

29,197. Would you say a better class than you get for the diplomatic service itself?—Far.

29,198. Do you attribute that a good deal to the fact of the virtual existence of a property disqualification of 400*l.* a year?—I do not think so; but I do not think it is of very much importance really. The whole tone and tendency of the diplomatic service in the past and its prospect of promotion have not been such as to tempt very able men into it as a rule. I think when an able man goes into it, it is rather because his father or somebody belonging to him wants him to go into it, because he has been connected with it himself rather than because the boy has much belief in it or interest in it.

29,199. Does not this insistance upon the property test, tend to make an artificial standard of living in the diplomatic service itself?—I think something makes an artificial standard of living; I should rather imagine that it is probably the whole tone and opinion of society upon the subject of diplomatists. It is not really necessary that a youg man should have a large income to live in a great capital and to live as a gentleman.

29,200. Not if he lives reasonably and moderately?—That is so.

29,201. Of course he can spend anything he likes?—Yes, of course.

29,202. As a matter of fact, in transfers from the Foreign Office there has been no talk of property?—No.

29,203. If the two services were amalgamated, I think Sir Philip Currie admitted in evidence that it would be a great gain to the Foreign Office to be able to recall men at times of pressure?—Yes.

29,204. Could that be done more easily do you think with a service which combined the three branches in one whole, diplomatic, consular, and Foreign Office?—Well, as regards a commercial negotiation no doubt you could find on the consular staff men who would be most useful to you, even if the men were kept a long time at the consulates, if they were freely interchangeable.

29,205. At the present time supposing that there is a commercial treaty to be negotiated do they ever send for consuls?—When I had to negotiate with the French Government I sent for Mr. Crowe, who had come into the service as consul-general and who was commercial attaché at Berlin at that time.

29,206. Of course he has passed from the one service to the other?—Yes. He has always been in a somewhat peculiar position. He came in as a consul-general but he discharged functions more diplomatic than consular. Then he went to Berlin, where he discharged both diplomatic and commercial functions; and so he does at Paris. Nominally he discharges commercial functions only; but really he is a good deal employed in what are diplomatic capacities, I believe.

29,207. We had the advantage of hearing Mr. Law; he was taken straight into the service from outside?—He was; and there was some objection made at the time; but I believe that it has been admitted since that the appointment was a good one.

29,208. If the whole service were amalgamated, do you believe that the traditions of our Foreign Office would make men who entered loth to take the lower work, as they would imagine it to be, of the consular branch?—I do not know. Some of the consulates, such as the consulates in healthy places, I think would be in demand among the men who thought that they had no great future before them. I think they would like them.

29,209. Do many men consider that when they enter?—After a little time I mean. I do not mean the moment a man enters; but after he has been there some time.

29,210. It was suggested by Mr. Law that every diplomatist or certainly all those who ever thought of taking up commercial work should pass a certain time in the commercial department of the Foreign Office; do you believe that would be of much practical use?—It has been lately decided by the French that all their men shall pass a year at least out of three years in the Commercial Department, and I think it might have an advantage here. Generally speaking, I am in favour of transferring the men freely for them to see a good deal of the various sides of the work.

29,211. If the whole of the services were amalgamated you would have to revise entirely the scales of pay, to make exchange possible?—I have no doubt consular revisions would have to take place, but perhaps not so much as is supposed, because at the present moment there are many exchanges of men each retaining their own rate of pay.

29,212. Between the diplomatic service and the Foreign Office you mean?—Yes. So that you will have men doing the same work at the same place, but drawing very different rates of pay now.

29,213. Practically the opinion expressed before this Commission has been unanimous in favour of amalgamating the Foreign Office and the diplomatic service?—I am glad to hear it.

29,214. But with regard to the consular service, very little has been said. What I want to know is how you could bring that into the system?—I should be glad to see it partly brought in, even if it could not be completely brought in, if there are difficulties, financial and other, which prevent a complete amalgamation. Even then I should be glad to see important consulates that fall vacant offered, at all events, to the Foreign Office and the diplomatic service before being conferred upon persons brought in from the outside. I have a great horror of the use of any Government employments as mere patronage.

29,215. Would you appoint them without further examination in commercial law for example, or any subject of that sort?—I have no objection, myself, to a second examination after the men are already in the service; but it is generally found that you have to leave a loophole. There are some men that you want to bring in whom it is impossible to subject to an examination, and then if you do leave a loophole it destroys the system of examination.

29,216. But you are against a ladder in the consular service itself, I understand?—I do not think it is necessary, according to what we see of the French example.

29,217. Therefore let us take a concrete instance; supposing a man were a second secretary, and he were offered one of the best consular posts, he might be transferred; but if he wanted promotion he would have to go back after some years to the diplomatic service or to the Foreign Office?—Yes.

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

29,218. He could not look for his promotion in the consular service?—No, because there would be nothing above his post.

29,219. He could not claim it?—Not as a rule. That is the case now with the consular service. There are some men who go straight into important consulates where they perform most valuable services, but where they have no chance of promotion, and who remain for the whole of their lives in the same place.

29,220. It has been pointed out to us that the absence of a chance of promotion has rather a mischievous effect?—But still under my system these men would have a better chance, because by performing from time to time duties for ministers for example, they would become known in the diplomatic world, and the best of them would become ministers or ambassadors.

29,221. We have in our service two great bodies of consuls de carrière in Turkey and the Levant, and in China and Japan?—I have no doubt there may be reasons especially connected with the native languages for making those to some extent a close service. I believe that it is necessary, and no doubt it is very necessary to have at all events a portion of the staff speaking the native languages better than you can hope for if you do not treat them partly as close services.

29,222. Then you would leave them as they are?—I do not know that I would leave the whole service as it is, but I think some special provision for having a constant supply of men speaking those languages is necessary.

29,223. You know how they are trained of course?—Yes.

29,224. I want to get it exactly from you that your proposed amalgamation would only apply to the consuls outside those countries?—It would apply chiefly to those.

29,225. You do not contemplate the abolition of unpaid or commercial consuls?—I am afraid that there is no hope of getting the money to replace the unpaid consuls by salaried consuls. I had sooner as a principle have salaried consuls, but I am afraid it would be hopeless to expect that the salaries could be obtained.

29,226. In no case, I suppose, could you have salaried consuls in small places like the great list I have got here in Sweden and Norway, where the fees are about 5*l.* a year?—In some of those places consuls have been appointed simply because they are unpaid, simply because they do cost nothing. If there had been a proposal to pay a salary, the result would have been that the consulate would have been abolished.

29,227. They are very small, as you say, but if they are pleased with the dignity of the name, so much the better?—Yes.

29,228. Therefore you do not propose at present to decrease to any large extent the number of unpaid posts?—No, I prefer the system of paying people to the system of not paying them, but as a practical matter I should not.

29,229. When transfers have taken place from the consular to the diplomatic service, it has always been in the case of exceptional men who have distinguished themselves at their consular posts, has it not?—Chiefly I should think. The men that I named were all distinguished men, but then of course naturally it would be the distinguished men that would occur to one; there may be other cases, which I did not think of, of men who would not be called distinguished.

29,230. But there are not the same chances of coming to the front, of course, in the consular service as there would be in the other two services?—That is so.

29,231. Therefore a man who entered it might want a comfortable berth, but he would sacrifice the hope of distinction to some extent?—Under the present system certainly, but I should propose, for example, by employing consuls in diplomatic work, from time to time to give them a much better chance of becoming known.

29,232. Yes, but you took the example of a man at New York?—Yes.

29,233. I imagine it would be very difficult under the present system to spare him from New York, which is the commercial centre of the United States, and to send him to Washington, which is simply the political centre?—It is only a question of sending him there for a time. In most cases you have someone who is able for a time to do the work, under the general direction of the other man, conveyed by post.

29,234. (*Mr. Harvey.*) You told us that there was no ladder in the French service. If that be so, how is promotion secured?—The promotion is generally by changing from one branch of the service to the other. A man does not so much get promotion within the consular service as he gets promotion by being moved from the consular service into a higher post in the diplomatic service, or in the Foreign Office again.

29,235. Now is the effect of that, that the French consular service is a fairly contented one?—I have no means of saying whether that is so or not. I cannot answer the question.

29,236. I think, in answer to Mr. Lawson, you said that you had given some attention to the system of open competition in force for the consular services in Turkey and the Levant. I have no doubt you are aware that a ladder system was set up in connexion with that?—Yes.

29,237. The evidence that has been given to us would seem to shew that the cost of that service was considerable. Did you ever think that the cost of that service as organised on that system and with that ladder was excessive?—I should have thought not, but I cannot say that I have sufficient knowledge to be able to form a clear opinion. I have some knowledge of the Consulate at Bangkok, and I have some knowledge of the consulates in Turkey, and Japan, and on the China coast, but I cannot say that I have that knowledge which would justify me in giving an answer to the question. I do not feel that I should be justified in answering.

29,238. But you would be of opinion, would you not, that if you had to adapt a similar system with a ladder similarly arranged to the whole service the list would be, I may say, unendurable?—Yes, I am afraid it would.

29,239. Is not that almost a fatal objection to any idea of amalgamation so far as the consular service is concerned?—I cannot think that it is, because the best consulates are very much sought after at the present time. When one of them falls vacant an enormous number of applications are received by the private secretary of the Secretary of State, and they are frequently given to pure outsiders. I cannot but think that no harm could be done, but on the contrary good would be done if they were given to those already in the service who might wish for them, and who might deserve promotion.

29,240. Taking the present arrangement of the consular service as we have it in the Estimates, would you think that that would lend itself to an amalgamated service?—I should think the best way of bringing about amalgamation was to bring it about gradually; that is to say, to recommend a gradual filling up of the great consulates by consuls instead of by outsiders, and the facilitating of exchanges between the Foreign Office and the consulates where men themselves desire it, bringing in fewer men from the outside except men of great distinction specially chosen for embassies.

29,241. (*Mr. Lawson.*) Would there be any difficulties of etiquette at the great courts in bringing in men from the consular service?—I do not think so. There is a great deal of joking about the consular spot or blot, the *tache consulaire*, but I never heard that it was in the way of M. Herbette at Berlin or M. Tissot here that they should have been in the consular service.

29,242. (*Mr. Harvey.*) Supposing you had such an amalgamated service as you contemplate, what would you make the limits of age for entrance. As you are aware the present limits are 25 to 50?—Yes. I am rather disposed to rely upon the tradition of the service at the time being, and upon the discretion of the Secretary of State, than upon any absolute limit of age. I do not like the idea of bringing in outsiders to the consular service; but I could not lay down an absolute limit of age for the whole service because I would not prevent a cabinet from choosing an ambassador of 75 if they want to bring in a particular man for a particular post; therefore I could not lay down an absolute limit of age for the whole service in such a system. Then again if you are applying it to the consular service only, I see no reason for having a special limit of age for the consular service. I should have a late limit of age, say 30 or something of that sort, for bringing in men in the ordinary or normal way.

29,243. We have had a good deal of evidence given in favour of the great importance of a man remaining for some time at a consulate in order that he may get the necessary acquaintance with the language and local

customs. How does the French system affect that. A member of the French consular service is continually being moved about; does he get the requisite local knowledge and the requisite knowledge of the language?—The men who have got a knowledge of a particular language which is very difficult, such as Chinese or Arabic, or any of the other out-of-the-way languages, naturally go backwards and forwards when they are on their consular or diplomatic work chiefly in the countries which speak that language. That is to say, a consul speaking Arabic works chiefly in the basin of the Mediterranean, or in the countries where Arabic is spoken, and a consul who speaks Chinese works chiefly in China. The point always is that he comes back and does work in the French Foreign Office between two terms of service in China. Very likely he would go to the Foreign Office for three or four years and then go back to China. They would not as a rule send him to America when he knows Chinese, but they would send him back to China after he has been sometime in the Foreign Office.

29,244. They do practically have a system of grouping, that is to say, by language?—To some extent they do. On the other hand, in our own system as you know, there are many startling exceptions to that rule; take Sir Kirby Green for example, his training is Levantine. Then he was employed in Montenegro, now he is employed in Morocco. Of course the languages there are as different as any languages can possibly be. There are other cases also of the same kind, men who have gone from the American continent to China and *vice versâ*. Our own system is by no means absolutely one of keeping men always in a country of the same kind.

29,245. Supposing the present distinction between the diplomatic and consular service were retained, we have had a suggestion made to us that commercial business should be the especial business of one secretary at each embassy, would you favour that idea?—I do not think that there is sufficient commercial business other than what you may call consulate business at many of the places to justify it. When Mr. Crowe was at Berlin, distinguished as he is for his knowledge of commercial affairs, I doubt whether he had very much Berlin commercial work to do. I think his work that he actually did at Berlin was mainly political work. He was very useful I think to the ambassador. He was nominally accredited to the other courts and he used to make general commercial reports; but if you had limited him to the commercial work that was to be done at Berlin, I do not think there would have been enough for him to do. At Paris through the very large amount of our trade with France, and through the extremely obstructive French regulations and laws, there is an immense amount of commercial work, and no doubt it fully occupies his time, but I do not think that you would find in each capital enough commercial work, there may be in some but not in each capital, enough commercial work other than consular work to take one man's whole time. Of course you can give him work, you can make him report on a great number of things, but of actual work that he must do I do not think there would be enough.

29,246. Speaking generally, are you satisfied with the relation of the Foreign Office and the diplomatic service to commercial necessities?—I have as a rule found that it is not the best commercial men who complain the most of the absence of help. There is no doubt a wide-spread discontent with the existing system. There are a great number of people who will tell you that it is very bad, and that the Foreign Office ought to do a great deal more for trade than it does; but I do not think as a rule that the best men tell you that. I think it is the men who are not so thoroughly and fully masters of the position themselves. My answer would be that I am not one of those who much believe in governments greatly pushing trade, and I doubt the success in the long run of the German experiment in trying to make their consuls actually push trade. But I attach great importance to the office helping traders where they get into trouble, where they have actual conflicts with foreign governments, and I think that the Foreign Office is increasingly anxious to make its diplomatists lend that kind of assistance to traders.

29,247. (*Mr. Lawson.*) You do not believe in our consuls touting for business as the Germans do?—I do not think it is likely to be successful in the long run. I would sooner trust it to the laws of supply and demand, and to the energy of our own people.

29,248. (*Mr. Harvey.*) Have you looked closely into our various consular reports?—Yes, I have followed the consular reports pretty closely, they are improving, I think.

29,249. Do you find that the subjects of foreign nations use them in preference to their own?—In the case of many foreign nations they have none of their own. In America the Labour Bureau of the United States, and other Bureaux, Statistical Bureaux, are now turning out most excellent reports, and are communicating information pretty freely, and I understand they have certainly pushed very far a system which might probably be extended here, but probably rather by the Board of Trade than by the Foreign Office, that of answering inquiries. If persons write to the American Statistical Bureaux, say to the labour bureau at Washington for information, their letters are answered at once. A large amount of information of the most accurate kind is freely given to them. That is an excellent thing, but I should think it is rather a Board of Trade matter, than a Foreign Office matter.

29,250. We have had it in evidence that lower division clerks might fairly be employed on subordinate work in embassies abroad. Leaving out of sight for the moment your general position with reference to lower division clerks, and assuming that they are to continue, would you be in favour of that?—With the limitations in the question—Yes, because there is at embassies a great deal of work of that non-confidential kind, which answers to the work which I explained in detail at the Foreign Office, and just as that non-confidential work might be picked out at the Foreign Office, and put into a non-confidential room manned by lower division clerks, so it might be done at embassies. You might have a chancellerie, whatever you like to call it, at each embassy, manned by one or two lower division clerks in which all the non-confidential work of this kind would be done. Of course it would only be in the case of a very large and important embassy, where there would be work for two such men, and in some of the smaller posts there might not even be regular work for one.

29,251. (*Mr. Lawson.*) Except in one or two places we have got no class in our service corresponding to the chanceliers of the French?—No, that is so. At the same time the chanceliers of foreign embassies are, I believe, thoroughly trusted as regards confidential work, so that to imitate their system you would employ people that you trusted with confidential work. Then of course there is this danger, that it is like keeping a page where there are a butler and several footmen, but the page does the whole of the work.

29,252. (*Chairman.*) I think there are one or two points which you probably would like to mention to the Commission?—I think that Lord Lingen on a former occasion has raised the question whether too much of the work of the Foreign Office does not go to the head men, and I think that he is right in thinking that a great deal too much of the work does go to the Secretary of State, the Permanent Under Secretary, the Parliamentary Under Secretary, and the two Assistant Under Secretaries. It is the system in the Foreign Office that everybody at the head of the office sees nearly everything. I think that the men at the head of the office, and especially the Secretary of State himself, are troubled with a great number of trifling matters which ought not to occupy their time. Lord Hammond and Lord Tenterden used to insist upon the Secretary of State seeing everything, and it was only by a breach of direct instructions that the work of the office could be got through at all. As a matter of fact the Secretary of State did not see everything, but Lord Hammond and Lord Tenterden always complained when they found out that he did not, and it was supposed that no paper could go forward, as it is called in the Foreign Office, unless it had the actual initial of the Secretary of State himself. Well that is a hopeless system, it causes a terrible block of work. Lord Salisbury substituted a printed stamp of his initial which could be used by a private secretary, and that of course facilitated matters a little. But still, even now I believe from what I hear, that the Secretary of State is troubled by much work which he ought not to have to see.

29,253. (*Lord Lingen.*) The two offices that I was in were both of them organised in divisions. I mean divisions between upper and lower clerks. The rule there was that the junior clerk of the upper division in each department was the first person the letters came to. If it was an acknowledgment, if it was anything perfectly simple, he would write the minute upon it,

The Right Hon. Sir C. Dilke, Bart.

6 Mar. 1890.

and that would go up to the senior in his own division. He would initial it; nobody else in the office would see that letter at all. In that way it was a sieve opening from the bottom, and certainly in neither of those offices, not one letter in a hundred went up to the Secretary of State?—That would be so. Then there is one matter of economy with regard to the Foreign Office which I ought to mention, I think. It is with regard to the printing bill. I am of impression that the printing bill is unnecessarily large. I think there is a good deal of matter printed—and a good deal of matter printed for Parliament—by the Foreign Office which is unnecessary. Foreign Office blue books are laid before Parliament in a form in which a good deal of the most important and interesting matter is very naturally and very necessarily cut out, but its place is taken by an enormous amount of utterly uninteresting matter which no creature can read, covering-despatches, letters, repeating the same thing four or five times over in different words, and an enormous amount of matter which it is quite unnecessary to circulate.

29,254. (*Chairman.*) On the other hand there might be complaints, might there not, sometimes if some letter had been accidentally omitted. I suppose the object of putting everything in has been to show that there has been no exclusion?—But there always is exclusion in the Foreign Office; there always must be.

29,255. (*Mr. Lawson.*) There is no necessity, for instance, to have a letter such as this: "My Lord,—I "have the honour to enclose, &c."?—No. Of course sometimes that happens under pressure of work. The head of the department is supposed to prepare papers for Parliament, and generally does so. He is a very hard-worked man, and naturally he saves himself time by shovelling things in. It is easier to put them in than to take the trouble to take them out, but still that does swell the printing bill.

29,256. (*Chairman.*) Have you anything to say about the hours of the Foreign Office beyond what you have said?—I think the men work as long hours as they do in most of the other departments, from what I hear. They do not work the enormously long hours that are worked by the head men at the Local Government Board, in which I was, but I believe that those hours are exceptional in the public service. I should imagine that the Foreign Office worked as long average hours as other departments. Of course the work begins late, and that is really for the convenience of the Secretaries of State. The Secretaries of State have it in their power to change the hours if they like. The hours were changed in my time, and they have been again changed since my time. Before my time the hours really began only at one—the men only came at one. I believe they nominally came sooner, but practically they only came at one. The first change was that Lord Granville ordered that one man should be present in each department so as to be able to find papers by half-past 12. Then that was made 12, and I believe that now a considerable number of men are there by 12, if not the whole staff, so that the hours have successively become a little earlier. I am not aware that they have been shortened at the other end. I do not think that the men leave earlier than they did, so that the hours seem to have lengthened since I was there.

29,257. (*Lord Lingen.*) Then there is an understanding at the Foreign Office, is there not, that a man must be there as long as he is wanted?—Certainly.

29,258. The fixed hours are a minimum only?—That is so, and the men do there, and nowhere else, so far as I know in Government offices, except so far as Sir Hugh Owen and Mr. Provis, of the Local Government Board, are concerned, stay past the sacred hour of 8 o'clock; the Turkish department, for instance, in the Foreign Office in my time was often open till 9 o'clock.

29,259. (*Chairman.*) Have you any view upon the subject of diplomatic pensions?—No, I have not given any real attention to it.

29,260. (*Mr. Lawson.*) I understand you think that the Foreign Office itself is alive to the commercial interests of the time, and gives all the information it can to departments and public bodies as well as to individual traders?—I think so. There are some very good men now, and have been lately in the commercial department of the Foreign Office, and I know that the complaints that have been made in Parliament and elsewhere have made them thoroughly alive to the necessity of doing it, and I think that they do what can be done. But I am one of those who take a humble view of what can be done. I do not think it is possible to content trade upon those subjects or to do much that is really useful.

29,261. Except by way of information I suppose?—Certainly, and by way especially of great courtesy and punctuality in answering questions and correspondence, that is the most important thing.

29,262. (*Chairman.*) I do not think I have anything else to ask you, unless there is anything you wish to add?—I do not think there is anything else that it is necessary I should enter into.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

EIGHTY-SIXTH DAY.

7, Whitehall Place, Westminster, S.W., Friday, March 7th, 1890.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN, K.C.B.
Mr. A. S. HARVEY.
Mr. R. W. HANBURY, M.P.
Mr. H. L. W. LAWSON, M.P.
Mr. J. W. MACLURE, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Mr. HENRY HOWARD, C.B., called and examined.

Mr. H. Howard, C.B.

7 Mar. 1890.

29,263. (*Chairman.*) The Commission have taken advantage of your being at home to ask you to come and give evidence upon the subject of the diplomatic service of the Foreign Office with which you have been so long connected. Perhaps you will be so kind as to state shortly to the Commission what has been your experience?—I entered the service in 1865.

29,264. As an attaché?—As an attaché. Then I went to Washington, and I was made a third secretary I think in 1869, when I went to the Hague.

29,265. Then you were at Lisbon, I think?—No, I was appointed to Lisbon, but I did not go there, I went to the Hague instead. I remained at the Hague until 1871, when I went out with Lord Ripon's High Commission; and after that was concluded I remained in Washington as the British Agent to the mixed Commission dealing with the British and American claims which were not settled at Geneva. I finished the Commission in 1873. Then I was sent back again to America to pay the claims, as most of the claimants

resided in the United States. In the meantime I had become second secretary, and I proceeded to the Hague. There I remained from 1875 to 1877, when I was sent back again to Washington. In 1879 I came and worked in the Eastern Department of the Foreign Office, and for a short time I was Sir Stafford Northcote's private secretary when he was Chancellor of the Exchequer; but the country turned my chief out, and I had to revert to diplomacy. I returned to America in 1881. In 1883 I was sent down to Guatemala as Acting Chargé d'Affaires, and remained there, I think, about six or eight months altogether. Then I came home, and was on leave for some time. Then I worked in the Foreign Office also for a short time (which I do not think is mentioned in the Foreign Office list), and then I was sent to Athens.

29,266. You were secretary of legation then?—Yes; I became secretary of legation, in 1885, after very nearly 20 years' service. I was named to Copenhagen in December, but there was a disagreement between Turkey and Greece at the time, and I was not allowed to leave Athens until April, I think it was, or the end of March 1886. Then in 1886 I went to Copenhagen, and there I remained until the following August 1887, when I was asked to go out to China. I went out to China, arrived in Pekin in December 1887, and I remained in Pekin until August 1889, when at the request of the Government I made a tour of inspection of all the ports of China in H.M.S. "Porpoise," a most interesting tour, and now here I am again.

29,267. It is a very varied experience that you have had?—Yes.

29,268. We have had several suggestions made to us upon which we should like to ask you your opinion. One of these suggestions is that the diplomatic service and the Foreign Office might be completely amalgamated?—That, in my own mind, I do not think is feasible.

29,269. Would you state what objections you see to it?—In the lower grades I do not think it makes much difference; and the present regulation, by which the juniors can sometimes serve abroad and sometimes in the Foreign Office, I think is good for both. It gives the Foreign Office men some experience of the countries with which they are in constant communication; and, on the other hand, it gives the diplomats who, like myself, have perhaps been 12 years in Washington, an insight into European politics again and brushes them up generally. But when you come to the higher grades I do not think it would do. Of course there have been cases where first secretaries of legation have served in the Foreign Office, but I do not think it would answer, generally speaking.

29,270. Do you think it would answer as far as regards the entry into the service?—You see that is already provided for——

29,271. Is there not now a guarantee required of so much a year from an attaché?—That, I believe, is a private regulation, which I do not know anything of officially. For myself, I do not think any man ought to serve abroad unless he has at the very minimum 400*l.* a year, including his salary.

29,272. Do you think a young man joining the Government service requires rather more money to live, say, at Vienna or Paris, than he would to live in London?—Yes, I think he does. First of all he has to provide lodgings for himself.

29,273. Take the case of a young man who has got to find his own home in London; there are such Foreign Office clerks, no doubt, whose parents do not reside in London. Would such a young man find it easier to live in London than he would on the Continent?—I think so. In the Foreign Office he has got no social duties; he goes to the Foreign Office at 11 or 12, or whatever his hour is, and when he goes away in the evening he can go home and do what he likes. In the diplomatic service as soon as he has got through his office hours at the legation his social duties begin. No diplomat is any good if he simply does his work in the chancery. He has to go into society; he has got to mix with the people, and the more he can travel in the country in which he resides the more use he would be to his own chief and to the Government. He has got a great many expenses which a Foreign Office man has not got at all. For instance, when I was in Washington I was Sir Frederick Bruce's assistant private secretary, it was my duty to make myself acquainted with every single member of the Congress — about 600 or 700 of them—and every senator; and when Sir Frederick Bruce had receptions I was obliged to be able to tell him, "This is Mr. So-and-so from Iowa, and "this is Senator So-and-so from Arkansas." It was part of my official duties to know them all, because a minister cannot possibly be expected to do it.

29,274. (*Mr. Harvey.*) How did you get to know them all?—I mixed with the people; I went to all their receptions; I went constantly to the House of Representatives, and in that way mixing with society I made it my duty to remember their names as well as I could. In the same way at Vienna and Berlin and Paris, everywhere, in fact, it is the same thing. With these constantly-changing Governments the juniors have really to do, so to speak, the attorney work; they have got to get up the case for the minister.

29,275. (*Chairman.*) But notwithstanding that I think you said just now that as far as regards the lower ranks, at all events, of the service, it was a very desirable thing that there should be a great deal of interchange?—Yes, but there is at the present moment a great deal of interchange; in many cases men have been allowed to exchange. Mr. John Lumley, for instance, exchanged with a gentleman in the Foreign Office who is now serving in our service. Again, Mr. Louis Greville has exchanged with Mr. Conyngham Greene, who is also now in our service.

29,276. Supposing the difficulty which you have mentioned of the expenses which come upon a young attaché could be got over, do you or do you not think that there would be a considerable advantage in the complete amalgamation of the services upon entry; that is to say, that the men should enter upon the same examination and sort themselves into one line or the other in the same way as is done in the French service?—Yes, but you can hardly take the French service as the basis, because in that service the higher places are nearly always now filled by political men.

29,277. I am not speaking of the political men at the top of the service, but I am speaking of what you may call the rank and file, up to secretaries of legation?—Up to secretaries of legation.

29,278. Well, up to whatever point you like; you know more of the service than I do?—It is provided for now up to secretaries of legation. I do not believe there is any law which prevents a secretary of legation serving in the Foreign Office if he will; in fact, I know of one who did, Mr. Gosselin, who was a secretary of legation and who served for some time in the eastern department; but I would include secretaries of legation.

29,279. Do you think any further use might be made by our diplomatic service of unpaid attachés?—There comes the difficulty of the expense as I said a little while ago. A diplomat abroad is no good unless he can live comfortably; and the fact is, the more money he has the better diplomat he is, because although there is no provision for wives, and we are not supposed to have wives—until we become ambassadors then they are a necessity—and the law does not recognise them, at the same time we are like other people, and we must marry. If a married man has not money of his own he cannot accept an appointment which is offered him at a moment's notice. For instance, in 1871 I was just established at the Hague, and I had taken my house and furnished it from top to bottom. I got a telegram on a Wednesday saying that I was to be in Queenstown on Sunday to go with Lord Ripon to America. I gave up my house, got rid of it and my furniture, &c. Off I went; my wife followed me later. I came back in 1875 to the Hague. I had just furnished another house from top to bottom, when I got a telegram on a Friday saying that on Sunday I was to be in London to be secretary to the Fugitive Slave Commission. Away went all of us again. Then I was only the other day in Denmark. I had been led to suppose I should remain for two or three years, and I had furnished another house, and I had just finished paying the bills when I got a letter from Lord Salisbury asking me as a favour to go to China. Away went my furniture there. At the present moment I have a furnished house in Pekin; I have got furniture for another house in Copenhagen, and I have got a furnished house here. I do not complain; on the contrary, I am only too delighted that those opportunities were offered me; but at the same time it shows that if you want to be of real service to the Government, and be able to meet their wishes in going to places suddenly when you are really wanted, you must have money of your own. It is not a money-making concern.

Mr. H. Howard, C.B.

7 Mar. 1890.

29,280. (*Mr. Hanbury.*) I take it that it is a very exceptional case to have these constant changes?—I do not know. The Foreign Office know a man who is willing to go, and who can go. Such men of course go, and are, perhaps, offered more things than others, because they are always ready to go. Sir Francis Clare Ford, our ambassador at Madrid, is one of those instances. He, like Lord Wolseley, always has his trunk packed, and he has always been ready to go anywhere he is sent from the moment he became an attaché. He is now an ambassador and has well deserved the rank.

29,281. (*Chairman.*) My question rather originally pointed to this: I do not know how far it is the practice in our service—it is done at all events to some extent in France and Germany; but I want to know whether some use might not be made of unpaid attachés—young men who receive no monetary consideration whatever, but who having money enough are willing to make themselves of use, in the service without interfering in any way with the work or with the promotion of the regular service?—Oddly enough I have never been at any post where these honorary unpaid attachés have been. I suppose you mean the honorary attachés?

29,282. Yes, I mean those?—I never happen to have been at any post where they were; but I should think it would be a very good thing. There is nothing against their employment exactly, but you have not got the same power over such a man as you have over a man in the service.

29,283. But there are times, are there not, when the work of an embassy, or mission, or legation abroad is very heavy, although as a rule when times are quiet there is not much to do?—I have been unfortunate; wherever I have been we have had lots to do. When I first went to America we only had one Sunday every fortnight given us.

29,284. You are not familiar, I think, from what you have said to us, with Paris or Berlin; at all events I do not think you have had much experience at those cities?—No, I have never been at an embassy.

29,285. Then you would not have an opinion to express whether to some extent the staff of those embassies might be reduced?—I do not think they could be reduced; not in Paris, certainly, because so much goes through Paris.

29,286. I suppose you have been brought much in contact with our consuls abroad?—A particular class of consuls, I mean the Chinese consuls, I know a good deal about, but they are of course a separate service; the Chinese service is a close service.

29,287. We know that that service is only of recent establishment; from what you have seen of it, is it satisfactory?—It is very satisfactory. Of course there is some amendment required. I have just had to report upon it, and I think there are certain amendments which might be made so as to accelerate promotion, which is very slow for the junior members.

29,288. Was the tour which you told us you made by the direction of the Government partly with the view of looking over the consular service?—Yes, the whole consular China service.

29,289. And have you made a report upon that subject to the Foreign Office?—I have sent my report to Pekin to Sir John Walsham for his comments, and he will forward it to the Government.

29,290. I believe you have also had experience of consuls in America and in the other parts where you have been?—Yes.

29,291. What have you to say upon suggestions that have been made for amalgamating, at all events to a much greater extent, the consular and diplomatic services?—I do not think it will do.

29,292. Are you familiar with the practice of France in that respect?—I do not think it even answers in France.

29,293. What are the objections that occur to you in the case of France; how is it that the practice does not answer there?—The men are taken from such very different classes; one man is all right and another man is not.

29,294. Do you mean that you think that in diplomacy you want a different kind of man from the man in the consular service?—Yes, I think you do. Then, besides, these consuls in the French service who sometimes, I believe, become diplomats, are mostly men who have been made consuls straight off—I mean they have had no training up. Their training is so different. For instance, take the consular service. As a rule, a man is made a consul, and he goes to the Foreign Office, and he works a year or a certain number of months and learns his consular duties. Then he goes to Livorno, or somewhere or another, and becomes a consul. He has not had the same diplomatic training that we all have; he has not been copying for 10, 12, or 15 years; he has not been ciphering for all that time; he has not learnt the legends and the traditions of the service.

29,295. Would you be in favour of some system whereby young men entering the service could enter on the same examination or on a similar examination, and could go through work at the Foreign Office in the Commercial Department or otherwise, and then could drift into the consular service or into the diplomatic service, as the case might be?—You see he cannot drift very much; he can only drift into a vice-consulate, which generally will not keep him, or a consulate which may keep him; but he will be too young for that. There are no lower grades in the consular service; there is simply the vice-consul and the consul. Of course, if you take the China service, that is a totally different thing. He has to begin by being student interpreter to learn the Chinese language, which takes him three or four years before he can say a word almost.

29,296. If a young man enters the diplomatic service, or if there is a service, which for the purpose of argument, I suppose, is open, offering a career in other directions, and if he has been attached to some embassy or legation for some years, and has been paying particular attention to the commercial side of the question, is there any reason why he should not have the opportunity of promotion to a consulate as a recognised part of his career?—No; but I think he has the opportunity now. The Secretary of State can appoint him to any consulate he choses at the present moment.

29,297. Is that so as a matter of fact; are there frequent instances of that being regarded as a legitimate object of the career of a young man entering the service?—You see it is a different thing; as a rule in the consular service a man wants a salary to live upon. We, as a rule, do not. I, at all events, did not go into the diplomatic service to make it a trade and to live on my salary.

29,298. You would not have elected the consular service?—No, I certainly should not.

29,299. In the plan which has been suggested to us, and which I have just asked you about, there is no proposition that anybody should be compelled to take the consular service?—Then it remains as it is now. If a man wants a consulate, if he is of sufficient age or rank, I do not believe that Lord Salisbury or any other Secretary of State would not give him such a post.

29,300. Do you mean that practically it is now open?—Practically it is now open to diplomats to become consuls.

29,301. (*Mr. Hanbury.*) But then I suppose having taken a consulate he thinks he will be shelved?—Yes, he is shelved.

29,302. (*Chairman.*) That leads me to mention what I believe would be a consequence if this system were introduced, namely, that men could be brought back again from the consular service?—There are one or two cases where it has been done; for instance, at Sofia the Consul-General is an agent also. There are one or two of those cases where the man is not actually shelved; he comes back.

29,303. Sir William White is an instance, is he not?—He is shelved so far as the consular service is concerned. I mean he has got as high as he can. He never went back to the consular service. He went from Dantzic to, I do not where, and then to Belgrade, then to Bucharest, and then to Constantinople. He was always rising from the consular service into the higher grades of the diplomatic service. He has got what we call one of the "plums."

29,304. (*Mr. Harvey.*) Your point is that a man who wished could go from the consular to the diplomatic service, but not the other way. Is that so?—Yes. Of course all consuls would like to become ministers.

29,305. (*Mr. Hanbury.*) In China are the consular and diplomatic services in any way amalgamated?—No; they are perfectly separate.

29,306. Then a consul in China, even after the training and selection he has gone through, will not in the ordinary course expect to become an ambassador in the East?—The end of his service is Consul-General at Shanghai, that is the highest post. Sometimes of course they are made ministers in China, like Sir Rutherford Alcock, who was made a minister in China, and Sir Harry Parkes. Then there is Sir Thomas Wade, who went in, I think, as diplomatic secretary.

29,307. (*Mr. Lawson.*) At the same time, of course, the consuls in China and Japan, certainly in China, as well as in Turkey and the Levant, are diplomatic officers?—They are political officers.

29,308. They are political officers at least as well as consular officers?—Certainly, and they are judges. It is a different career entirely from the other consular services.

29,309. I am not saying it is not, but there would be a certain interchange between the functions of the two services?—No; it is simply that the consul, on account of the British jurisdiction in the ports, is a judicial officer and a political officer, as well as a consular officer.

29,310. Quite so; in Turkey, and it is the same thing in China, a man might even have to manage, in a particular far-away town, what would be termed a diplomatic question of some kind?—Yes, certainly; that is where his political character comes in; there is no doubt about that.

29,311. (*Mr. Hanbury.*) But in spite of that there is a broad line drawn, even in the East, between the two services?—Oh, yes. The diplomatic establishment consists of a minister, a first secretary, and one second secretary, and sometimes two. They, of course, do not know Chinese, and they come from other places, whereas all the men in the China consular service must know Chinese or else they are no good at all.

29,312. (*Mr. Lawson.*) It is not an advantage for them, I suppose, not to know Chinese?—I think it is almost. Of course they must know a certain amount of Chinese, and you can always pick up a certain amount of Chinese, but I do not think it is any advantage to the minister to know Chinese.

29,313. Nor to his secretary?—His Chinese secretary, of course, is the interpreter.

29,314. I mean the secretary of legation?—I do not think he would find it of much advantage. He has got nothing to do with Chinese. He remains too short a time; he generally remains only two years. Well, you cannot get the slightest knowledge of Chinese under two years.

29,315. (*Mr. Hanbury.*) Does not that go to show that he is useless rather?—Not at all.

29,316. If he remains there so short a time?—He takes the place of the minister in the absence of the latter.

29,317. But we are talking of the minister?—I was talking of the secretary of legation.

29,318. (*Mr. Lawson.*) You could not expect him to know Chinese, but do not you think it would be an advantage that he should know Chinese?—If the secretary of legation knew a little Chinese I do not know that it would be of much help to him, and I do not believe it would help the Government much. It might help him a little, but as to the minister I am not at all sure that it is not better that he does not know Chinese. For instance, at the Tsungli-Yamen, which is the Chinese Foreign Office, you sit all round a round table. There are five mandarins on one side, then comes the minister, his secretary, and our interpreters. If the minister knows Chinese the mandarins address themselves straight to the minister, and he has not time to think what he is going to answer; whereas if they address their remarks to the Chinese secretary he interprets, and whilst he is interpreting the minister has time for reflection. I have been told by ministers who did know Chinese that it was a disadvantage to know that language, because the Chinese officials addressed them direct, and they all talked at once, and they had no time to think what to answer.

29,319. (*Mr. Hanbury.*) But as a matter of fact if the members of the diplomatic establishment do not know the language of the country the consul does, and yet the highest posts are reserved for the people who do not know the language of the country?—The diplomatic men are changed about so much.

29,320. I know, but as a fact they do not know the language of the country?—They do not know the language; but they do not know it in Persia, they do not know it in Turkey, and there are precious few who know it in Holland.

29,321. Do you think it is an advantage that they do not?—I do not say it is; but they are generally there so short a time. You cannot keep a man for ever at the Hague or for ever in Copenhagen.

29,322. (*Lord Lingen.*) The Governor General of India does not know Hindustani, I suppose?—I do not suppose he knows Hindustani; he could not.

29,323. (*Mr. Lawson.*) Lord Dufferin learned it, I think?—Yes; and poor Mr. Grosvenor learned Chinese when he was there, but he was there four or five years, I believe.

29,324. At times of stress in China, when there have been difficulties in that country, a man has been promoted to be minister from the consular service, has he not?—In only two instances—those of Sir Rutherford Alcock and Sir Harry Parkes.

29,325. In times of difficulty?—No, I think it was simply because they knew a great deal about the country, and their services have been very good, especially in the case of Sir Harry Parkes.

29,326. (*Chairman.*) Are you able to say from your knowledge of the consular service that it is a satisfactory service?—The consular service in China, which is the one that I can speak of, is very satisfactory.

29,327. Would you say the same of the consular service, so far as you have known it, in other parts of the world?—So far as I have known it, it has always been very satisfactory. In America we had very able consuls; we had no more able man than Sir Edward Archibald, you will remember, in New York.

29,328. (*Lord Lingen.*) That is a very well paid post, is it not?—Yes; but then the consul at New York has very great liabilities and responsibilities. Every Englishman who can take a holiday and has money enough goes to America. Well, the Consul General at New York has to be civil to all; in many cases they bring letters of introduction, some official, and others friendly. The Consul General's salary is not too much if he has to entertain all those people. Then the rent at New York for his house is very high.

29,329. (*Mr. Harvey.*) Is it supposed to be a part of his duty to entertain?—I think so. We all consider, both in the Consular and Diplomatic service, that our salaries are more or less given to us to live upon if we can, and to entertain our compatriots when they come there. In fact in China the legation at Pekin is the English hotel there. There is no other hotel really. There is one wretched little hotel kept by a Frenchman in which there are four rooms to let, and if those rooms are taken the Minister has to put up everybody, in fact we do, either the Minister or the First Secretary, put up everybody who comes to Pekin.

29,330. At the expense of the Minister?—Yes; or that of his staff.

29,331. (*Mr. Hanbury.*) Is that done by the other embassies?—Everybody else does it. We do it more because there are more English globe-trotters than of any other nation.

29,332. Except the Americans. Do the Americans do it?—There are not very many Americans who go to China.

29,333. (*Chairman.*) What do you say about the mission at Washington? A suggestion has been made to us that more importance ought to be given to Washington, and that England should be represented by an ambassador instead of an envoy extraordinary?—I think the Americans would like to have it an embassy. Washington to us is one of the most important posts in the world, there is no doubt about that. I think it would please the Americans if it was made into an embassy. They would like to reciprocate, but have never seen their way to do it.

29,334. Could it be made an embassy without reciprocating it on the other side?—There is a case in point. The French have an ambassador at Berne and have had for many years, I believe, but I do not think the Swiss have anything more than a Minister resident in Paris.

29,335. (*Mr. Harvey.*) What is the practical difference now in working between the two ranks?—In olden days the ambassador had and has still a right

Mr. H. Howard, C.B.

7 Mar. 1890.

to direct audience with the sovereign. In Washington, of course, he can go to see the President when he likes, whether he is ambassador, or envoy extraordinary, or anything else, but the President could not tell him much if he did go to see him; therefore in that way it would not make the slightest difference.

29,336. Would it make any difference to anybody except in the dignity?—I think the Americans would take it as an expression of good feeling; but practically in the actual working of the thing I do not see that it makes any difference.

29,337. (*Mr. Hanbury.*) Does not it limit our choice. Would a man who is ambassador at Berlin agree to go to Washington under present circumstances?—I think the question of pay would have to be considered, in addition to the question whether he would like to go or not.

29,338. Assuming the pay was equal?—No, I should not think so.

29,339 I mean as a question of dignity, would he care, having been an ambassador once, to come down to being an envoy-extraordinary?—No, once an ambassador he would never come down; but do you mean if Washington were made an embassy.

29,340. I mean, under the present circumstances, does not the fact that you have only an envoy-extraordinary at Washington, rather limit your choice?—Certainly, it does.

29,341. (*Chairman.*) Is there any point on which you would like to suggest anything to the Commission?—There is the question of pension. I always thought that was a difficulty. I am perfectly unbiassed, because I do not want to retire in the slightest; but there is always a question with me, as to the First Secretary's pension. If you look at the Act you will see that it provides for all the different ministers, and it provides also for the Second and Third Secretaries; but it says nothing about the First Secretaries. Heretofore, it has always been the rule, that when a First Secretary wants to retire and ought to retire, for some reason or another he was allowed to retire and given the salary that he was drawing at the time. Lately, however, the Treasury have made some difficulty about it, and the consequence is that there are many First Secretaries who would like to retire but who cannot.

29,342. (*Mr. Lawson.*) On their salaries?—The Treasury do not want to give the whole salaries, and they cannot afford to retire without any pension at all. The end of it is that they do not retire.

29,343. (*Mr. Hanbury.*) Retire at what age?—We have secretaries who have over 30 years' service.

29,344. (*Chairman.*) Why is a First Secretary not entitled to a pension; the other secretaries being entitled to a pension of the fourth class?—I do not know; the Act does not say anything about it. The custom has been ever since I have been in the service, that when a First Secretary is retired, he is given the salary of the post he last occupied. I do not say in some cases that may not be too much,—I think it is—but if there was some fixed sum on which he could retire after a certain period of service, I think it would be much more satisfactory.

29,345. (*Mr. Hanbury.*) You say a pension is provided for the Second and Third Secretaries, but not for the First?—The Act provides for all the Ministers; the Second and Third Secretaries, who can be pensioned if they are invalided; but it does not say anything about the First Secretary. I tell you what the practice has been.

29,346. (*Mr. Lawson.*) Very often he has taken the position of a Chargé d'Affaires. Does he take the rank of Chargé d'Affaires?—No, he is not a Chargé d'Affaires; he is an acting Chargé d'Affaires.

29,347. The Second Secretary, supposing he has served 30 years, receives the salary upon which he retires as pension—is that not so?—He receives one-thirtieth for each year.

29,348. Therefore, he receives the salary?—Yes, therefore I think there ought to be a time specified when a man has a right to take his pension like there is in the India Office, and in the Indian service, and in other services. At present we cannot retire until after we are 60. Well, a First Secretary of 60 is the laughing stock of Europe.

29,349. Other Civil servants have to remain till they are 60?—They remain in England, and they do not live in different climates, as we do. We really ought to be put under the unhealthy climate system, under which two years abroad counts for three. I was moved myself from Guatemala, for instance, to Washington. When I left Guatemala, for the last eight months I had been there, it was about 90 degrees constantly in the shade. I suddenly ran back to Washington, where it was below zero. Then take a man who is at Buenos Ayres; he is moved to St. Petersburg, and again from St. Petersburg he may be sent to Pekin.

29,350. (*Chairman.*) Is not the scale which is in the Diplomatic Pensions Act a much more liberal scale of pensions than exists in the Civil Service generally?—I do not think so. I think in some other services—the Indian service—they have just as high pensions, if not higher.

29,351. (*Mr. Hanbury.*) They come under what would be called the unhealthy climate?—Yes, but what is not unhealthy in one way, for one person, may be unhealthy for another. Although, St. Petersburg, to a person who remains there, may not be very unhealthy—it is not accounted as unhealthy—yet for the wretched man who goes from Pekin to St. Petersburg, St. Petersburg would probably be very unhealthy. It is the constant change of climate which is so trying. In olden days of course people remained very much more at one place, now we are sent from every sort of place to every other sort of place.

29,352. (*Mr. Lawson.*) I do not know whether the First Secretary is not mentioned in the Act?—Of course the Secretary of State has got a right—it comes under that—to give a man a pension. In olden days, when I entered the service, when we became noodles, we were allowed to retire and given our salaries. Now there is a difficulty about it.

29,353. (*Chairman.*) Have you any other suggestions to make to the Commission?—None.

29,354. (*Lord Lingen.*) You have had experience of work both in the Foreign Office itself and abroad?—Yes.

29,355. Do you find much difference in the routine of dealing with papers in the Foreign Office, and in the missions abroad, where you have had to work upon them?—No, I do not think so; it is very much the same.

29,356. In both, do you think anything could be done to relieve those who, to a certain extent, are in responsible positions, and who look to come into responsible positions from the routine work—for instance, from the great amount of copying that has to be done by young Foreign Office servants and diplomatic servants?—I do not see how it is possible certainly in our Legations, because, of course, when we enter the service we are bound especially to secrecy, although we take no oath about it. It has got to be done by the men, you cannot give it to outsiders to do, that I can see. Nearly every paper abroad, with the very few exceptions of commercial reports, has more or less of secrecy attached to it—not that the secrets are worth anything; but yet it does not do for them to be talked about outside.

29,357. Then you would not regard favourably the introduction of a different order of clerks to do the minuting of such papers as were not confidential?—Yes, that I think would do very well in the Foreign Office.

29,358. Would the same thing hold abroad?—I do not think so. I think the man's place would be invidious; he would belong to us and yet he would not belong to us; and therefore I do not think it would do abroad.

29,359. Then if you would not alter the persons who do the copying, would your experience lead you to say that a good deal less copying than now takes place is necessary at the foreign stations. Are not a number of documents copied that are sent to the Foreign Office, of which the substance might perfectly well be given in a despatch in a line or two, and the originals kept if anybody wanted to refer to them. Do not you think there is a large copying of enclosures that might be dispensed with?—Yes. It is difficult to give an opinion upon that subject because so many of these copies that are sent are notes, &c. that we have received from foreign Governments which must be referred to. Of course it depends upon the distance, if it were at Paris it would be very easy to get a note at once, but if it were at any more distant post, the note, if it is wanted at all, would be wanted at a

moment's notice, and then you would not be able to get it.

29,360. If you received an important written communication of the substance of some interview, or something of that kind, from a foreign minister in the Ambassador's Chancery at one of the great capitals, would that be sent as an original paper, or as a copy?—As a copy.

29,361. And the original would be kept in the Chancery?—Yes.

29,362. And it would remain there just as papers do in the library of the Foreign Office for successive Ministers to see?—Yes, exactly. The note is generally described in the despatch, and if there is any important wording, it is generally given in the despatch itself so as to relieve the Secretary of State who receives the despatch from the bother of reading the whole of the other document.

29,363. I know in your own case, a good many years ago, you were employed on important and responsible work like the distribution of the Alabama compensations, and so on. A good many of your contemporaries are not employed upon work of that kind. Do you think that the enormous amount of copying they have to do, which is purely mechanical work, has a bad effect upon them?—I do not think so, I think it is good discipline. Besides, in copying they see what other people write, they see different styles, and so it helps them to write despatches and other papers.

29,364. I can fully understand that for two or three, or even three or four years, that would give a man an insight into the practice of his profession; but if it is continued through long years, as it is now with a junior clerk in the foreign service, do you think that has not a prejudicial effect upon a man?—I think it depends upon the man's constitution. Some men can stand it, and others cannot. It is a dreadful bore, there is no doubt about that. I do not see how we are going to change it except in the commercial part of the Foreign Office. I do not believe in giving irresponsible people papers for which others are responsible.

29,365. On the whole, then, you would be inclined to say that the clerical arrangements are not unsatisfactory?—As far as I know they are not unsatisfactory.

29,366. There was one point in your evidence about unhealthy places to which I wish to refer. There is a certain number of places which are scheduled at which two years' service counts for three. I suppose if you remain in the course of your career at Pekin, we will say for five or six years, during those years you would have the benefit of that, would not you?—No, that does not apply to the Diplomatic Service at all.

29,367. Is it confined only to the Consular Service?—It is confined only to the Consular Service. I might remain at Pekin all my life and get no compensation for it.

29,368. (*Chairman.*) On the other hand, I think it is the case, is it not, that the scale of pensions under the Diplomatic Act is much higher than that for the Consular Service?—I do not think so.

29,369. The members of the Consular Service come under the usual Civil Service pensions scale?—I think they are higher when you come to the unhealthy places, and we are all the time in unhealthy places.

29,370. But the *quid pro quo* for your unhealthy service is the exceptional scale of pensions enjoyed in the Diplomatic Service as compared with the scale in the ordinary Superannuation Act?—If that is intended as *quid pro quo* it is all right.

29,371. (*Lord Lingen.*) You mentioned that you thought that a part of the training of a young attaché is to keep his eyes and ears open?—Certainly.

29,372. And mixing with the natives as far as he can, and finding what the atmosphere of public affairs is?—Yes.

29,373. For that, of course, a tolerably accurate knowledge of language is wanted?—Yes.

29,374. As far as your experience goes, are the English embassies on an equality, we will say, with the German in knowledge of languages?—I believe so, quite.

29,375. Quite?—I think our young men, particularly at the present day, are quite equal to any foreign service; they are better than the French, and perhaps the only exception I should make would be the Russians; but they are natural linguists. Of course all the men in our service must know French and German, and most of them know these languages very well. There are any quantity of others who know more; there are many who know Spanish, and Dutch, a bit of Danish, Russian, and Turkish, and a good many other languages; it depends where they have been.

29,376. I suppose a young man who looked for promotion who was suddenly whipped away from Vienna to South America, would make it his business, if he did not know it already, to learn Spanish?—Certainly; I went from Washington to Guatemala, and in three months I could talk Spanish sufficiently. Of course I have forgotten it again; it went in and came out again; but in three months' time I could ask for anything and say anything I wanted, and talk with anybody.

29,377. Would your experience be that that is the case with such of your contemporaries who really look to get up in the service?—Yes, some of them are excellent linguists. For instance, George Greville, who is now in China, is one of the best linguists I know. He talks French like a Frenchman, he knows all the Latin languages, a good deal of Greek and Swedish, and now he is learning Chinese.

29,378. China would be quite an exceptional place, would not it, Chinese being of very little use to you when you are outside China?—Yes, it is quite exceptional.

29,379. You want a completely separate service for that in the consular branch?—Yes.

29,380. And if you want to secure the same advantage for the Diplomatic Service, you would require a separate Chinese Diplomatic Service?—Yes, of course it would be impossible otherwise; but there is another consideration. Although we have had two ministers who have risen from the Consular Service in China, my own impression is that a diplomatic minister who has not been to China before makes a better minister. He has got no record in China. The Chinese do not forget a thing. If there is a man who has committed an act displeasing to the Chinese 25 or 30 years ago, when he was a consular assistant, they remember that, and when he becomes a minister they say, "Oh, that " is the man who did this, that is the man who did " that"; whereas if they have a totally new man whom they have never heard of before and who has no record with them, he is very much more apt to do well.

29,381. Some of the highest Chinese officials in China, I suppose, know English now, do not they?—The only one who knows English at all is the Marquis Tsêng. He talks English pretty fairly, and he is on the Grand Council, but he is the only one on the Grand Council who talks English; the others all talk Mandarin.

29,382. When you have to deal with other ministers in China what sort of man interprets, one of our own Consular Service?—Yes. The Chinese Secretary ranks with a consul. He is first interpreter, and the Assistant Chinese Secretary ranks with a vice-consul; they are the interpreters for the Legation. It is the same only with difference of name in every other Legation in Pekin. In the German they are called Dolmetschers, and in the Russian, Dragomans and interprêtes.

29,383. (*Mr. Harvey.*) Are they specially appointed now?—They all come as students to Pekin and then they become consular assistants, then vice-consuls, consuls, &c. Every nation has followed our example.

29,384. (*Mr. Hanbury.*) Do they keep the same barrier between the Diplomatic and the Consular Services?—Yes, except the French; the French did until a very short time ago. At the present moment both the French Minister and the French First Secretary were originally consuls; but it is the first time it has ever happened. Of the others, M. Constant, you know, was the last minister; his was, of course, a political appointment. M. Bourée, who was before him, is now in Berlin, and M. Bourbalon and all the other men were diplomats. It is a mere accident this time that M. Lemaire was appointed minister.

29,385. (*Lord Lingen.*) Have you found the consuls or the interpreters so well up in the language that they were thoroughly able to inform the minister in the interviews that he has with the higher Chinese officials?—The Chinese Secretary, who is the First Interpreter and the Assistant Chinese Secretary, are always chosen from the whole service more or less; at any rate,

Mr. H. Howard, C.B.

7 Mar. 1890.

from the senior members of the service on account of their proficiency. Of course, one man is more proficient than another. One man can read Chinese and is a better classical scholar perhaps than another one, but the other one may be a better speaker, and therefore you have to choose your man. For instance, Mr. Hillier who, unfortunately, on account of his eye-sight weakening, has been now made Acting Consul-General at Söul, is about the best Chinese speaker that has been in China.

29,386. The point I want to get at is that you find them competent and satisfactory for all diplomatic purposes?—Perfectly. Mr. Hillier was put to a great test the other day when I was there. It was at a banquet given to the Diplomatic Service by the ex-empress on her abdication. Herr Von Brandt the German minister prepared a long speech which he gave to Mr. Hillier the evening before, and Mr. Hillier got up at this banquet and read off the whole speech in Chinese. Then Prince Ching, who was the president of the Foreign Office and a cousin of the Emperor, got up and answered in a long speech in Chinese, and all Mr. Hillier could do whilst Prince Ching was speaking was to make notes. The moment Prince Ching sat down he got up and interpreted this speech in the most excellent English, and the Marquis Tsêng who happened to be there said he had never met any other Englishman or any other foreigner able to do it so quickly with such a long speech and so well rendered in English.

29,387. Then, on the whole one, may take it that in China between the consuls and the ministers' staff there is for all diplomatic purposes a sufficient knowledge of Chinese provided?—Ample.

29,388. With regard to anything like social intercourse with the higher Chinese, I suppose there is hardly a field for it; or no opening at all?—No.

29,389. In that respect the service would not at all compare with the European services?—No, you never see a Chinese at home. Sometimes some of the Mandarins call as a matter of courtesy, but we never go to any Chinese house; we are never invited into a Chinese house. We have never been inside the precincts of the forbidden city, and when the Emperor goes anywhere screens are put about so that we should not see him; and we are forbidden to go into any part of the city which he is to pass through.

29,390. There is another point I should like to ask your opinion and experience about. We have had it a good deal pressed upon us. Our Diplomatic Service is much more expensive than that of other European countries, do the young gentlemen that you have come in contact with who belong to other embassies, lead much the same lives as Englishmen in foreign capitals?—Yes, but they are not able to do always as much as we do. After 20 years' service I got 500*l.* a year. I was four years in the service not paid at all; then for another three years I got 150*l.* a year, and when once during the time I was receiving 150*l.* a year I came home with my family, my whole salary went in travelling expenses between Washington and New York, with the exception of 20*l.*, in fact I spent the whole salary of my year in ten days.

29,391. If you were to take a young Hungarian, German, Austrian, or young Prussian gentleman, many of those would be the sons of wealthy families and houses?—Yes, a great many of them.

29,392. Do men of that class live very much in the same style as others do?—Yes, I think they do; but as a rule as you say a great many of them have some fortune of their own. That is what I advocate in our service—I think a man ought to have some fortune of his own in the Diplomatic Service.

29,393. Have you at all compared what their salaries are with our salaries?—I think in the junior classes they are very much the same as ours. I think the First Secretary of Pekin gets very much the same as I do, they all get very much the same. They very often have houses and lodging money.

29,394. I gather from your evidence that your own opinion would be, that, taking all things into account, there is no room for reduction in the public expenditure on the British Diplomatic Service?—I do not think so. I do not think that the men can really live upon much less. They cannot live upon what they get, and at all events it should not be reduced.

29,395. Would that be generally true of the British Minister himself. As a rule, do you think that when he quits one of these posts he is out of pocket?—I do not believe there is any case in which he has made any money; and I know several cases where he has been heavily in debt. Then foreign ministers get money in other ways. They have not only salaries, but the *Frais de representations;* that is all right and the total is sometimes less than ours; but in nearly all those services, if they have to give balls, or suppers, or tableaux vivants or anything of the kind where the Court to which they are accredited are present, they get paid for that particular supper, that particular dinner, that particular ball.

29,396. And, of course, that does not come out; that is, so to speak, secret service, which is not shown in the estimates?—That is so.

29,397. (*Chairman.*) Is that done to any considerable extent?—It is done a great deal, particularly in the Russian service, and also in the French; it used to be done still more in the days of the French Empire; but since the Republic they have been a little more economical.

29,398. Let us take an instance. Suppose that the Russian Minister gave an entertainment in London which was something of an official nature?—Yes, I suspect he would be paid.

29,399. You mean to say it would be quite possible that the extra expense incurred by that, would be paid by his Government?—Yes.

29,400. Of course, one cannot get any information on that point, it is impossible to get any information?—It is impossible, and it would not be courteous to try to get it, but there is no doubt about it.

29,401. (*Mr. Hanbury.*) When you spoke of the young attachés of considerable means who are sent out by the Austrian or German Governments, were you thinking of paid attachés or unpaid?—I was thinking of men in the service.

29,402. We have heard that the Austrians and the Germans have a great many more unpaid attachés than we have?—Yes, I think they have.

29,403. Are the class of men that you were speaking of paid or unpaid?—The men I have met, of whom I was talking really, were the paid ones. I was thinking of a man I knew at Copenhagen. The Germans have a different system. For instance, a man is a secretary; he is not a Third Secretary, a Second Secretary, or a First Secretary, but he is Secretary of Legation; and suppose he goes to a legation where there are two secretaries, the one that is senior to him in the service is First Secretary, and he becomes Second Secretary, but he is Second Secretary of that Legation. He is not a Second Secretary in the service. So they have a different system to ours. We have of course three classes—third, second, and first.

29,404. One reason that you have given is, that some of the expenses are probably paid out of the Secret Service Fund; is there any other reason why the whole scale of our salaries paid to our Diplomatic Establishments should be higher than those of any other nation?—I think so. I think first of all we have a great deal more commerce, and in fact we have got a great deal more to look after. Then we have a much greater travelling population, and a great many more British subjects settle in all those places than any other nation.

29,405. Why should that involve greater expense and larger salaries to the ambassadors?—It involves much greater expense in entertainment, and in every possible way.

29,406. Take the question of entertainment, does it involve entertaining British subjects more than the subjects of other nations are entertained by their ambassadors?—Yes. What Frenchman travels, what Austrian travels, how many Germans travel? Whereas our men are travelling all the time in every country of Europe. Look at the colony of English in Paris; look at all the people that go through Berlin; look at the people at St. Petersburg; everywhere it is the same.

29,407. That is what I want to know; is that the main argument for those higher salaries?—I do not say it is the main argument; I only say it is an argument, that they have to spend more than others. Besides, I do not think that the Russian salaries are any smaller than ours.

29,408–9. I am comparing embassy for embassy; take the embassy at Paris, for instance?—I did not under-

stand you were talking simply of embassies. I thought you meant the total expense.

29,410. I am putting out of view the Consular Service?—If you add to the ambassador's salaries all the special entertainments that they give, as the Russians do, then you will find that the Russian salaries are not very much less than ours.

29,411. Then it comes back to what I said; that the main reason for these ambassadors salaries is entertainment?—Well, yes; an ambassador ought to entertain; he is no good unless he does entertain.

29,412. Is there any other reason?—Well, he has got to live like a gentleman.

29,413. So have other ambassadors?—So they have; but I do not think the other ambassadors are paid very much less.

29,414. Take Paris, for instance, is not it the fact that the salary of our ambassador alone in Paris is almost equal to the total cost of any of the other embassies?—I think the salary of the Russian Ambassador in London is higher.

29,415. I said take Paris?—Paris for us is the important place, for Russia it is London. You will find the Russian Ambassador in London, which is their highest post, is paid more.

29,416. Why is Paris our most important post?—First of all the French are our neighbours, and then for years and years it has been an important post.

29,417. We know that the centre of Europe has practically changed. Is there any special reason why Paris should be treated on the same scale that it has always been?—I do not see any reason for a change, but as a matter of fact it was reduced by 1,000*l.* the other day.

29,418. (*Mr. Lawson.*) You were saying that a great part of the duties of a secretary of legation, or an ambassador, is to make himself acquainted with the people and to go among them. In a country like China, that would be impossible, perhaps in any case; certainly without a knowledge of the language?— I am putting China, Japan, and Persia aside.

29,419. I will take another country. Take Russia, in travelling through Russia I should say you could obtain no information outside the official classes without a knowledge of the language?—No. But I do not quite mean travelling in the country, I mean travelling about in the different societies you are obliged to meet.

29,420. But when you get outside of St. Petersburg, is not a knowledge of Russian absolutely necessary if diplomatists are to fulfil their functions?—They nearly all do learn Russian, and there is a reward if they do of 100*l.* a year.

29,421. Does not it come to this—that it would be a positive advantage in some embassies where there was a good deal of this social work to be done, if you had men who had a previous acquaintance of the language, which was something more than elementary, sufficient to pass an examination in order to obtain 100*l.* a year?—You mean a colloquial knowledge of the language?

29,422. Yes. I know what it is in Arabic, and I do not suppose the examination in Russian is much more severe?—It would be very difficult to obtain what you suggest. You cannot have such a service, or else you would have one man spending all his time in Russia.

29,423. Would not you get that by occasional transfers from the Consular Service of men who had been resident in the country, and who might be of great assistance to their colleagues in the embassies or legations, as the case may be?—I do not think that consuls, as a rule, have the training for such social duties.

29,424. The social duties are not the only ones?—You were talking of them.

29,425. Quite so; but by social I meant more than merely going to the salons and in society; I meant going about and hearing what the man in the street says, which is occasionally useful, I suppose?—I do not think that sort of thing is of much good. If we were prying about and going among people like that I do not think we would get on very well as diplomatists.

29,426. It has been stated to us here by an official witness that politics are becoming more and more separated from what is called society in different capitals; do you mean merely the social work of going to parties?—I mean going into all classes of society. In Russia you will not find any man belonging to any kind of society who does not speak French or English, and there is no English diplomat who does not speak French or German.

29,427. You will not find anybody below the official class who speaks any other language than Russian will you?—Yes, every army man is obliged to know French.

29,428. I say the official class?—The first thing the Russians, in every class, do is to have English governesses for their children.

29,429. Of course, in China there is no language spoken, as you say, but the native language?—Yes; but then, of course, you know in travelling in China the Mandarin does not help you all over the place, because a Pekinese does not understand a word that a Canton man says.

29,430. Then how do you manage with your student interpreter?—They know Mandarin, which all the official classes in China, the men they have to deal with, are obliged to know. The taotais and the governors, and the viceroys all speak Mandarin, and any man holding an official position in China is obliged to know Mandarin. With the people of the country it is different, they speak all sorts of dialects. A great many of our consuls know half a dozen dialects, Cantonese and Formosan and Pekinese; they are all different.

29,431. I was not under rating the difficulties, I was thinking it might be useful in certain cases to have men possessed of this knowledge at your own embassy or legation?—We have; we have got a whole staff of them.

29,432. But they are apart from you, and there is an absolute barrier between you?—No.

29,433. There is an absolute barrier of class; they cannot pass from their own service into yours; at least, they cannot in practice?—They went into the China service, knowing exactly what it was, and we went into our service also, knowing what we were going to do, and for our particular purpose. Why should they come over into ours or we bother them?

29,434. (*Lord Lingen.*) As a matter of fact, I think I understood you that two ministers had been appointed from the consular service?—Yes; really two. I want to be absolutely correct. Sir Thomas Wade was appointed from the army as Chinese and diplomatic secretary, and he became as you know, minister. Sir Rutherford Alcock was appointed from the consular service, and became minister, and Sir Harry Parkes also; so it may be said that there were three.

29,435. (*Mr. Lawson.*) I think you rightly pointed out at the beginning of your evidence, that these occasional promotions do not mean interchange?—No.

29,436. Because they have never been promoted to junior posts?—No.

29,437. And have they never gone back?—No.

29,438. There is no interchange at present between the services?—No; ours is a close service, and theirs is a close service.

29,439. And the exceptions cannot be taken into account?—No.

29,440. You are against anything like an interchange between the two services?—Yes; I am against any interchange.

29,441. You are telling us about the tour you made around the consular establishments; do you believe it is an advantage that the China and Japan branch at the Foreign Office should be distinct from the rest of the consular branch?—No man is any good who does not know Chinese or Japanese in those services.

29,442. I do not mean that; in the Foreign Office itself, the consular service is not dealt with by the department which deals with the consular service of the rest of the world?—It is separate, for the very reason that you pointed out, that the consuls in China are in many cases political officers as well as consuls.

29,443. So they are in Turkey and the Levant?—Yes.

29,444. You do not believe it would be an advantage if the China service was transferred to the consular department of the Foreign Office?—I do not think so; it has worked so well as it is, and I think it is better to leave well alone.

Mr. H. Howard, C.B.

7 Mar. 1890.

29,445. At present it is in the American department, is not it?—It is called the American; but the American department includes China, Japan, Siam, the United States, and South America too, I think.

29,446. So far as your inquiries went, you did not perceive that there was any friction caused by the present arrangement?—No; as I told you, they went into the service, and they knew exactly what it was.

29,447. As to the commercial reports, do you think they are as well done in the Chinese service as they are elsewhere?—I think so. I think they take a great deal of pains. We have a great deal of difficulty just now, because in one way the Germans are pressing us very hard in commerce; but our consuls are doing very good work in showing to the British public what to import and what not to import, and everything in that way.

29,448. Do you think at the present time that our consuls are really doing all that they can?—Yes, everything.

29,449. Of course, there is this broad distinction between the German service and ours, that our consuls do not tout for particular orders or particular firms?—No; but they always point out to the British public what things would sell and what would not sell; and supposing any inventor or anybody else goes over to China, they are always very civil to him, and introduce him to the proper people. Of course, it would not do for us, particularly in an eastern country, to go and say, "We want you to accept this," because it would assume a responsibility for the Government which would be rather awkward afterwards.

29,450. Are they men of commercial knowledge?—They begin at 18 in the consular service, and they live among merchants the whole of their lives, so they ought to know something about it.

29,451. You are thoroughly satisfied with that service?—I really am with the various consulates as to the personnel.

29,452. (*Mr. Hanbury.*) But you do not think they would do well in the diplomatic service?—They would be no good in the diplomatic service. What good would they be? I do not mean to say that there are not exceptional cases where a consul in time would make a good minister, of course there would be; but as a rule, as I have already said, I think a man who is unknown to the Chinese makes a better minister.

29,453. (*Mr. Lawson.*) Of course you would not appoint them to other courts than the Chinese?—No, I am talking of eastern people. Of course there are good men in the consular service, as good men as we have, and some of them a great deal better.

29,454. I find there is a man who has made his mark as consul who came from the Foreign Office, that is Mr. Crawfurd, he is now consul at Oporto. He was a Foreign Office clerk?—But a very junior one, I suppose; I do not remember him.

29,455. He is on the diplomatic establishment of the Foreign Office; as a matter of fact there are exchanges between that and the diplomatic service?—Yes.

29,456. Therefore there does not seem any reason why these exchanges should not be made?—But he will not be able to go back into the Foreign Office; he will never get back again.

29,457. Then do you think the door ought to be shut against him?—I think it is better to have distinct services. As I say, among the junior clerks I think it is very good that they should have a little experience abroad; and I think it is very necessary that the diplomat should have experience in the Foreign Office; but I am in favour of keeping them distinct services.

29,458. The trade reports from the consuls have been as we know particularly valuable; do not you think that a consul with a little commercial knowledge of that sort might do some good in the Foreign Office; do you not think he would be valuable?—Yes; but supposing you put that man in the eastern department, what good is he there. If he is put in the commercial department of course it is different.

29,459. But he might be put in the eastern and western department?—In the eastern and western, he never would have anything commercial to do there.

29,460. The eastern takes in part of Europe?—It takes in all Turkey.

29,461. Not all. As a matter of fact, you think that if a man elects to go into the consular service he ought to be debarred from all hope of promotion outside his own particular branch; and there, of course, it is not regulated, and it is very limited?—No, I do not think so, because there is many a consul who has become a minister. When you come to the top there is between the two services a sort of no-man's-land, sometimes a consul general may be a diplomat and at the other times the consul general may be a consul, and from consuls general, ministers are made.

29,462. Yes, but that has its advantages; do not you think that a system of transfer a little lower down might have some advantages too?—No, I do not think so. Of course, that is my own opinion, and I only give it for what it is worth.

29,463. You mentioned what your opinion was as to the necessary means that a man should have before entering the diplomatic service. You are aware, I daresay, that where there have been transfers from the Foreign Office higher up in the service there has been no question of a property qualification?—I think you misunderstood me. What I meant to say, if I did not say so, was that no man in the diplomatic service should have less than 400*l.* a year.

29,464. I quite understand, that is the rule in the Foreign Office?—When he is unpaid attaché he should have 400*l.* a year private fortune. When he comes to be paid, together with his salary he must have 400*l.* a year, he must never have less than 400*l.* You see for the first two or three years his family can give him 400*l.* a year, and may be very well able to give him that for two or three years, but when he gets 250*l.* they need only give him 150*l.*

29,465. Supposing you have an amalgamated service, we have been told that in the Foreign Office there is an exact knowledge as to the position and qualifications of the men who are employed both in the diplomatic service and in the Foreign Office?—Yes, that would be so.

29,466. There would be no difficuly, I suppose, in selecting a man to take a particular post who could afford to take it, or if he felt that he could not do so, there would be no difficulty in his saying that he had not the means, and therefore he wished to stay where he was, either abroad or at home?—No; but you know it is the case now. I do not see any use in changing it. In the Foreign Office a man who can get a diplomat to exchange with him may do so.

29,467. You have got two systems of examinations at the present time and two services, although there are exchanges between them?—Yes, but only temporary exchanges.

29,468. At the present moment there might be a difficulty if there was a press of work either at a particular capital or in London, in speedily transferring men, there might be formalities which would have to be gone through?—The Secretary of State has only got to say, Send Mr. Howard to Constantinople, and he would go.

29,469. That is all in your own service?—No, I mean it is in both service. The Secretary of State could make a man acting third secretary or acting second secretary if he wished.

29,470. Then practically the distinction is only nominal?—That is so.

29,471. If it were swept away it would not mean any real change?—No.

29,472. (*Mr. Harvey.*) We have had it in evidence that a great portion of the work of a young diplomatist is dull and mechanical?—It depends upon the man so much; if he chooses he has lots of work to do of course. He copies; he keeps a register and he ciphers; that is all necessary for him afterwards to know his work.

29,473. Still I suppose we may say that if that is continued too long it must necessarily tend rather to weaken a man's power of initiation?—Yes, I should think it would.

29,474. If that be so is not that an argument, as far as it goes, in favour of an amalgamation between the Foreign Office, the Diplomatic and the Consular Services, if you could by instituting such a system as that, getting your merely mechanical work done while retaining enough of it for the training of a man for a few years, getting it done after that by a totally different class of man, and by your amalgamation be enabled to

use the talents of a man who has entered the three services wherever he is wanted, would not that be a strong argument in favour of the amalgamation; that you would be able to reduce the number of years during which a man is doing this dull and mechanical work?—Of course it would be very pleasant; but I do not see exactly how you are going to do it. Of course, abroad you cannot have a man of an inferior position to do the work of the legation.

29,475. We have had it in evidence that, what we call our Lower Division clerks might fairly be employed in many of the embassies abroad for a great deal of this dull and mechanical work?—I have never been in an embassy, but from my experience I should not like to employ them abroad.

29,476. (*Mr. Lawson.*) Like the chancelliers of the Foreign Office?—If you have a permanent chancellier and archivist—there is one in Paris—in many of the legations he would be very valuable. For instance, in Washington if you had one man there who looked after the archives, who kept the register, &c., and he remained there permanently, I think he would be very valuable, because he keeps the traditions, and remembers the cases—the fishery cases, and all the cases which go on for years and years, and he would know exactly where to find them; but that would not relieve the mechanical work.

29,477. (*Mr. Harvey.*) From your standpoint that would be a disadvantage, would not it, for under the present system that sort of work would form a training for the diplomatists?—In just keeping the register, anybody can do that.

29,478. (*Mr. Lawson.*) Who keeps the register generally?—It is generally the junior man.

29,479. At Washington, I mean?—At Washington when I was head of the Chancery I always kept the register, because I had a great deal of work to do, and I liked to see how it was going on; so I kept the register while I was there and saw every paper, because I was responsible to the minister to see that the work was done and carried out; and I could not know what the questions were about unless I knew exactly what had been done.

29,480. (*Mr. Harvey.*) What is the ordinary life of an attaché at Washington. Does he spend the whole of his time, except so far as social engagements may intervene, in copying letters?—No, not in Washington. It depends upon the man. I know when I was head of the Chancery at that time I used to divide the work and give some of the very junior ones drafts to write to the consuls. We used to divide all the consular work and all the commercial work between us.

29,481. Now as to the commercial work, have you yourself had any training in the commercial department of the Foreign Office?—No, I have never had anything to do with the commercial department of the Foreign Office.

29,482. I suppose you would be of opinion that it would be well that every diplomatist should have some training in the commercial department of the Foreign Office?—I really do not quite know what to answer, because a great many diplomatists have not time to do that. When you are going from one place to another you learn a great deal about commerce.

29,483. Take the earlier part of his career, do not you think that everybody appointed to the Diplomatic Service should pass a certain length of time in the commercial department of the Foreign Office?—He has, you know, to pass a six months' probationary period, so to speak, in the Foreign Office when he enters the service, sometimes it is a year, but he must be there at least six months. He is generally sent to the department where he is most wanted, which as a rule is the Eastern department, and there he learns all the ciphering and everything in that way that he has got to do hereafter. Of course it would be an advantage if he learned something about commerce too, but if he wants to he can soon learn that abroad, because we correspond with the consuls on commercial questions the whole time.

29,484. Do you find that you get help from consuls in dealing with commercial questions?—Certainly, they write the commercial reports.

29,485. I suppose we may say that the consul as a rule knows a good deal more about commerce than attachés at the embassies do?—Of course, it is his business to begin with, and, secondly, he is always at the ports where the commerce is going on, whereas at the capitals there is no commerce going on at all. For instance, in China there is no commerce possible in Pekin, and we get all our reports from our consuls; for four months in the year we are frozen up in Pekin and do not hear from anybody except by telegraph or by letters.

29,486. We have had a suggestion made to us that it would be well if there were one attaché in our embassy whose especial business it should be to look after the commercial affairs, to be entrusted indeed with all letters and registration connected with commercial affairs. Would you approve of that yourself?—I do not know exactly how to answer it. They have had one in Berlin, and they have one in Paris—Mr. Crowe, I think—but I have not yet heard how it has worked. Of course it would only be in some very big places where it would be worth the expense of having a man, because in some of the smaller ports at Athens and Copenhagen and Stockholm, and the Hague, &c., there would not be enough for him to do.

29,487. You have expressed a high opinion of the China Service, which, as you know, depends on open competition. Have you formed any opinion as to the mode of appointment in the Consular Service generally?—No, I have not. There are two close services. There is the Levant, which is very much the same service as the China Service.

29,488. Referring to the appointments generally in the Consular Service, have you had occasion to look into the conditions under which appointments are made?—No; I have not had anything to do with them.

29,489. (*Mr. Lawson.*) From your experience, when the order comes to a Legation to report on a commercial or an industrial subject, does the First Secretary or the minister exercise any choice as to the person who should do it, or is it given indiscriminately?—It is generally the First Secretary's duty.

29,490. If he requires special knowledge how is he able to obtain it?—He obtains it either through the consuls or through the Commercial Department of the country.

29,491. If it comes from the consuls it is embodied in his report, and he gets the credit and not they?—He, of course, has to call upon the consuls for reports on the questions that he is asked.

29,492. It comes as his report?—Of course, the consular report is embodied, but he always acknowledges it if he has asked for a special report, or he may add the consular report at the end of his.

29,493. Do not you think that in the Consular Service there is an absence of opportunities of distinction which has a somewhat prejudicial effect on its efficiency. I am not talking of China and the Levant, but of the general service?—The class of men that are appointed to the European Consulates are a different class; they are gentlemen who have been in the army, or have had generally some career before.

29,494. Take the American?—In the United States?

29,495. All over America?—There have been excellent men there, but they have generally been appointed as vice-consuls first and then afterwards as consuls. Most of them are not men who were very young when they entered.

29,496. At the present moment they hardly have fair opportunities of distinguishing themselves?—They are good men and write excellent reports.

The witness withdrew.

Mr. Edmund Douglas Veitch Fane called and examined.

29,497. (*Chairman.*) Hearing that you were at home, we have taken advantage of that fact to obtain your opinion upon one or two questions connected with your service. I think with reference to your service perhaps you might tell us shortly what your experience has been?—I have been at 14 different posts abroad, and I entered the service in 1858.

29,498. Beginning in Persia at Teheran?—Yes, I was in Teheran for three years.

Mr. E. D. V. Fane.

7 Mar. 1890.

29,499. Then you went to Turin?—From Teheran I went to Turin; and from there I went to St. Petersburgh; from St. Petersburgh I was appointed to Washington; from there to Florence, and thence to Rome; afterwards to Munich, from which place I was transferred to Brussels. I was then sent to Vienna, and afterwards to Berne, when I was promoted to be Secretary of Legation at Copenhagen; from which place I was transferred to Madrid, and subsequently to Brussels; from which latter place I was promoted to be Secretary of Embassy at my present post at Constantinople.

29,500. You have had a very large experience of European capitals?—Yes.

29,501. There are one or two suggestions which have been made to us about the diplomatic service upon which I should like to ask you a few questions, perhaps the first with reference to a complete amalgamation of the Foreign Office and the diplomatic service; that is to say that young men should enter for both on the same examination?—As regards the examination, the diplomatic examination is not such a difficult one, because it is not open to unlimited competition.

29,502. Neither is the Foreign Office open to unlimited competition?—At all events the competitors, I think, are more numerous than with us.

29,503. (*Mr. Lawson.*) Because of the property test?—Yes, with us, of course, only men of a certain income could possibly enter the service.

29,504. (*Chairman.*) Upon that point a suggestion has been made to us, and rather influentially made, that the service might be improved if that property requirement or condition were done away with, and if by some means or other, young men could be either kept at the Foreign Office, or sent abroad into the diplomatic service, and more freely interchanged than they are at present; what is your opinion?—I think you would have to increase very much the salaries of the diplomatic juniors.

29,505. Upon that point, do you think it costs a young man, an attaché, we will say, much more to live in a good quarter in Vienna or Paris, than it does in London, supposing that he is an unattached man in London?—In London probably he would live with his family.

29,506. Supposing that he was not living with his family?—It would be cheaper, I think, to find lodgings in London than it would be abroad.

29,507. Is that the case, so far as your experience has gone?—It is my experience, certainly, that lodging is more expensive abroad. In foreign countries an attaché or a young secretary has to live with a certain set of men, he has to live with his own colleagues and with his foreign as well, and he must live according to their manner of living.

29,508. That is to say, the life at an embassy is——?—More expensive than a Foreign Office clerk's life need be.

29,509. But supposing that difficulty in money to be got over, either by a sufficiently adequate allowance or by some means of that sort, do you think there would be an advantage in bringing the services more together?—Yes. I think that a partial fusion of the services would be advantageous to us as well as to them. It would bring us more in touch with our own country, would enable us to see more of our friends and relations here, and would also give us an opportunity of attending to our business at home.

29,510. Apart from private considerations it is an advantage, is it not, that you should be called home to do some work in the Foreign Office more regularly than is the case now?—Yes; I think in that way we should know our colleagues in the Foreign Office, and we should also become better acquainted with the work as it is carried on at home.

29,511. Have you yourself been doing any work at the Foreign Office since your original appointment as attaché?—For a very short time; I was for a few months in the Foreign Office.

29,512. Is it fair to ask you whether you feel that your own position and work might be helped by having some work at home in the Foreign Office?—I do not think that I was long enough in the Foreign Office to say that it was any advantage to me in that way. If I had been at home for a year or two then it might have been really of use to me in my profession. I think it would probably be very useful to Foreign Office clerks also that they should see a little of foreign life.

29,513. Dealing with it from the diplomatic point of view, do I understand you to think that it would be an advantage?—Yes, I think it would be an advantage to us.

29,514. Clearly everybody must admit that it would be an advantage to a clerk serving at home if he had an opportunity of seeing the work being done abroad?—Yes.

29,515. A further suggestion has been made—I do not know whether you could give us an opinion upon it—that there might be, at all events to a considerable extent, an amalgamation of the consular service with the diplomatic service, as is the case in France especially?—Well, it is not done to such a very great extent in France. The amalgamation of the consular and diplomatic services is not carried so far as is generally supposed. It is only occasionally that they transfer their consuls to the diplomatic service, and *vice versâ*.

29,516. We have had evidence which points rather in a directly opposite direction, namely, that young men upon nomination and examination enter the Foreign Office at Paris, and that they are obliged to spend three years, differently divided, at that office and then go indiscriminately, practically, that is, partly with their own option and partly by the character of their work, either to the consular service or to the diplomatic service?—Yes, both services issue from the Foreign Office, I believe, but I am not thoroughly acquainted with their system.

29,517. That is saying that it is amalgamated, is not it—that is, one service?—Scarcely, because some go to the consular service and others go to the diplomatic service, and my impression is that the gentlemen who join the diplomatic service are but rarely transferred to the consular service, and *vice versâ*. They remain in the consular service or in the diplomatic service.

29,518. We have had many examples given to us in the opposite direction?—No doubt there are examples.

29,519. The gist of the evidence which we received—I may say it was the evidence of Sir Charles Dilke yesterday—rather put it in a stronger light than you do, namely, that in his opinion, and according to his knowledge of what happens in France, it was practically a united service. You think that it does not prevail to a large extent?—I do not think it goes so far as that. I cannot speak on the subject, except from having known a great number of French diplomatists, and certainly but a small minority of them I should say had belonged at any time to the consular service.

29,520. Do you see any advantage in introducing to a wider extent than at present prevails, in England at all events, what may be called an amalgamation?—No, I should think it was not a thing to be desired.

29,521. Can you give us your principal objection to such a course?—I think there is a different class of men who enter into diplomacy and who are required in diplomacy. I mean socially a different class of men to those who enter the consular service. Our consular service is one of enormous importance in consequence of our gigantic shipping and commerce. The consuls are men of business who have to think and deal mainly with those subjects and they are not men, as a rule, although they are thorough gentlemen, who socially speaking, belong to quite the same class of men as those who enter the diplomatic service and who ought probably to enter the diplomatic service.

29,522. A great many of them are what you may call political consuls, are they not?—We have not very many political consuls.

29,523. You have instances like that of Sir William White who himself started as a consul?—Of course he is a grand exception. He is one in a thousand, owing to his gigantic ability.

29,524. Would not it be possible to get the same kind of young men to enter the service by making the consular service worth entering by men of the same calibre that we attract into the Foreign Office and the diplomatic service?—Of course if you could succeed in doing that it would be an advantage, but I do not think that you would easily induce men of the position to which I referred just now to enter the consular service and be stationed at a port where they would be all day long receiving ship masters and overhauling bills of lading

and registering acts concerning shipping of various sorts and kinds. That would not be the temptation that diplomacy has for men of a particular social class.

29,525. I suppose there is a certain number of consulates which really might be regarded as objects of ambition to even second secretaries, might they not?—Yes, certainly. Some of our consulates-general, for instance, are very fine appointments. I do not wish for a moment to say that the consuls and vice-consuls are not in every way as good as we are, except that I do not think that they come from exactly the same social grade which makes up the diplomacy of our country, and also that of most other countries.

29,526. We have had suggestions upon the question of the general expense of our diplomatic service compared with that of other countries. From what you have seen of our embassies in Europe generally do you think that there might be, as has been suggested to us, some reduction in the number of the secretaries and some other provision made for doing the extremely routine and ordinary work of the embassies?—It would be undesirable to have in our chanceries anybody except persons who belong to the regular diplomatic service.

29,527. Does what you have said before when I asked you a question about the expense of a young man living abroad, apply here, that there is a collective life, a half family life so to speak?—Certainly, that is the case, for instance, at Constantinople we all live together, and it is an expensive life, not that there is any kind of extravagance, but it must in the nature of things be an expensive life. We all go into society together; we entertain, and are entertained by the same set of people; we all work together and join in the same recreations; we usually dine together, and, in short, have to lead generally one manner of life which only people with a certain amount of income could afford to lead.

29,528. Something like an officer's mess?—Very like it, in fact, we have a mess at Constantinople.

29,529. Are you able to express an opinion upon the general expense of our diplomatic service?—I believe that, relatively speaking, the salaries of our ambassadors and ministers are not higher than those paid to men of the same rank in the foreign services. I mean it in this way, that the scale of incomes and of salaries is so much higher in England than it is abroad, that what we should consider a modest income or salary would be considered by them as being a very large one indeed. For instance, to take Italy, their ambassador in Turkey, I suppose, receives (I am not quite sure) about 6,000*l.* a year. I should think something of that sort. Ours get 8,000*l.* But a salary of 6,000*l.* a year would seem to an Italian mind vastly larger than a salary of 8,000*l.* a year would seem to an English mind.

29,530. (*Mr. Lawson.*) I see he gets 591*l.* of salary, 3,944*l.* frais de representations, and 1,900*l.* for a house, that without including his house only makes about 4,500*l.*?—I was not aware of the exact figure.

29,531. (*Chairman.*) We have heard that the figures that we have received as to the salaries of foreign ambassadors to this country or to France, say, coupled with the frais de representations, are really supplemented on frequent occasions by the cost of entertainments given officially and otherwise?—Certainly, that is my impression. Take Russia for instance, it has happened once or twice since I have been at Constantinople, that Russian Grand Dukes have come to Constantinople, and all the entertainments connected with their visit were, I imagine, paid by the Government. But that would not be the case with us. Princes of our own Royal Family have visited Constantinople on two occasions since I have been there, and certainly I do not believe that our ambassador charged anything on that account to Government.

29,532. How about other nations besides Russia; do all these extra payments apply to them?—Yes, I think that they probably would, but I cannot answer that for certain.

29,533. Does that practice apply with regard to Germany?—I should think that with the German service it would be the case. I would furthermore observe that men who hold the posts of ambassadors in Foreign services are very frequently, men of great wealth. It is a position which is much coveted by foreigners who are rich. In most foreign countries people do not care so much about going into public life at home as is the case here; they have not the same country life that we lead; they are not busied with county government; therefore men of large fortune run very much for the sake of public employment after these great posts abroad. At Constantinople, for instance, two at least of the ambassadors are men of very great wealth. That is never the case with us, we never find an Englishman of large private means who would consent to live out of England.

29,534. (*Mr. Lawson.*) Sometimes?—Hardly, I think as a diplomatist, at any rate, very seldom, but I do not think I have ever known a rich man do so.

29,535. (*Chairman.*) The necessity of entertainment is sometimes urged as a reason why our salaries should be at all events apparently higher than those of other countries, coupled with the fact that so many more Englishmen travel than the natives of any other country; and it is also urged that it is expected that the ministers and ambassadors should do something for their countrymen and their families. Do you think that is a reason?—Yes, I think that is a very great reason. It is a very positive fact that the English embassies and legations abroad entertain a great deal more than the foreign ones do; it is not the custom in foreign countries to invite people to dinner very much, whereas with the English people it is very much the custom. Englishmen cannot restrain themselves from asking their friends and their countrymen to come to their house. With foreigners that is not nearly so much the case. I can assure you that at almost every place where I have been it is the English embassy, or the English legation, which has been at the head of society in the way of entertaining and receiving. I think that that would be acknowledged even by my foreign colleagues to be the case. Certainly I have not the slightest doubt in assuring you that it is so. For instance, in America, where I was for a long time, it was always the British minister who entertained, and who was expected to entertain by the Americans as well as by his countrymen. As I say, he was expected to entertain, and he always did it in a very grand way, and it was of great use to us in our relations with the Americans that that should be the case.

29,536. (*Mr. Hanbury.*) But that is one of the places where the salary is low?—No, it has been raised, it was in my time only 5,000*l.* a year, and I am afraid that the minister was much out of pocket.

29,537. It is only 6,000*l.* now?—Yes, it is 6,000*l.* a year now; that is more than in my time. Of course 6,000*l.* a year sounds a very good income, but in my opinion there is no place where the salary ought to be so high from my experience there of three or four years, as at Washington. I think it is about the most important diplomatic post that we have, and beyond that I think of all the posts that I know it is the place where the ministers should be able to receive and entertain in a very large and open-handed way.

29,538. And yet knowing that and having had occasion to revise the salary, we deliberately put it down at 6,000*l.* as being quite sufficient?—It is the largest of all the salaries paid to ministers. If you take an ambassador, an ambassador is put to greater expense in some ways; he has to entertain in rather a more princely style than a minister.

29,539. Whom does he entertain in a more princely style—his own countrymen?—I was thinking of the general style of living which is incumbent upon him. Wherever there is an ambassador there are royalties to begin with; then he would be obliged to have his horses and carriages and his liveries all on a grander scale than is the case with a minister. He represents the person of the Sovereign, and that is not the case with a minister.

29,540. Is that the case in Paris which costs more than any other of our embassies?—In Lord Lyons' time he had always splendid equipages and displayed the greatest hospitality.

29,541. (*Mr. Maclure.*) How much entertainment is there in Paris?—I do not know Paris since Lord Lyons' time. In his and in Lord Cowley's time I knew it, and they both entertained a great deal. In the first place, Lord Lyons received his staff every day; as many of his staff as chose to dine with him I believe. Besides that he had constant entertainments. A single ball at a place like Paris, I suppose, would cost not less than 700*l.* or 800*l.*

29,542. (*Mr. Lawson.*) It makes no difference, I suppose, in the case of the United States whether our representative be a minister or an ambassador?—Do

Mr. E. D. V. Fane.

7 Mar. 1890

you mean to say that it would not make any difference in his mode of entertainment?

29,543. Yes?—I do not think it would in America.

29,544. Your definition was not quite accurate, because you spoke of ambassadors only being possible where there were royalties. In Paris there are not any?—I know that, but I am speaking generally of the embassies.

29,545. (*Chairman.*) It would not be possible to do away with the embassy at Paris and have a minister instead of an ambassador?—No.

29,546–7. (*Mr. Lawson.*) It has been suggested to us that the Legation at Washington should be made into an embassy?—That is quite another thing.

29,548. Would you say that it would be merely a change of title?—The French have an ambassador in Switzerland; we used always to have an ambassador in Venice in former times. Every independent nation is a Sovereign State, and there is nothing anomalous in an ambassador being accredited from a monarchy to a republic, or *vice versâ*. To appoint an ambassador to a country instead of a mere minister is, of course, a greater mark of respect to that country.

29,549. (*Mr. Maclure.*) We only have a minister in Switzerland now?—I do not think we ever had an ambassador in Switzerland. The French have one at the present moment, they always have had one.

29,550. (*Chairman.*) Then there is another question I should like to ask you upon the diplomatic service and the Foreign Office; do you think that any more use might be made of unpaid attachés?—Unpaid attachés are, as it were, in *statu pupilari*, they are being trained.

29,551. I meant, are there more young men who have means of their own who might be very willing to learn, and who would serve without any idea of interfering with the regular diplomatic service, but rather as subsidiaries at places where, for the time being, there was a special pressure of work?—I think the Foreign Office, during the last few years, have rather adopted that plan, and it certainly is a very good one. It is good in every way; it is good for us, of course, to see our young English gentlemen of good position who come out, and who are attached to the embassies, and it is the old-fashioned idea of people in that position of life coming for a few years to an embassy in order to be trained, as it were, a little in foreign life, and to see a little of foreign courts. Of course they are also useful to us in our work, in our chancelleries, because they take their share of the work like an attaché belonging to the regular service. We have them in Paris, and in St. Petersburg, and in Vienna. At Constantinople we have not any honorary attachés, but I think it is a system that might be extended with advantage.

29,552. (*Mr. Maclure.*) We will take it for granted that the question whether we are to have at a given place an ambassador, or a minister is one which of course is simply and solely for the Foreign Office to consider, in order to please the *amour propre* of a particular country?—Yes.

29,553. You have had a most varied experience, and you have been according to your statement at several different posts?—Yes.

29,554. The system which has been adopted in France and America is one of sending educated persons to act as consuls and vice-consuls for those countries?—Yes.

29,555. Do you yourself think that it is desirable that all our consuls and vice-consuls should belong to the diplomatic service or consular service, instead of being simply members of trading firms, as most of our vice-consuls are?—The consuls, I think, do their buisness better, being what they are at present, that is to say, persons of a class in life connected with the middle class, we may call it, who are brought up to understand trade and shipping matters. I think that they are more competent to do their work, which is rather rough work in most of these sea ports, and better suited for it than if they were fine gentlemen with an Oxford or Cambridge education, and persons who require a great deal of society.

29,556. Take the case of the Pas de Calais, which you know extends from Boulogne to Ostend, there you have an American citizen, who has been properly trained, and we have sent a Mr. Bonham, who has been in the Foreign Office do you think, yourself, that a simple English merchant would be as good?—Yes, I do. If you could secure his services.

29,557. In Berlin we have Baron Bleichröder, who is a foreign subject, do you think he is a better man than a man from the Foreign Office at an important place like Berlin?—I do not think Baron Bleichröder is paid.

29,558. I know that, but I want a distinct and absolute answer to my question. Do you think that we ought to have a British subject connected with the Foreign Office in every important centre, such as Paris, Berlin, and Vienna?—At Vienna, again, it is true that the consul is a foreigner, but he gives us his services gratuitously.

29,559. I want a distinct answer to the definite question which I put. Do not you think that in these important centres you ought to have a British subject as consul?—I think it would be much better, if you could find one who would do the work for nothing.

29,560. But surely the country can pay him?—Yes, certainly, if you choose to do so.

29,561. Do you think that we should have a paid consul?—If he is paid, naturally it will be very easy to find an Englishman.

29,562. And do you think he ought to be properly trained?—Yes, if he is to receive a salary.

29,563. And that a British subject having to go to demand his rights ought to be able to go to one of Her Majesty's paid officers to demand his rights?—Yes, in those big capitals like Berlin.

29,564. At Vienna, Constantinople, and, I may say, wherever you have got a minister or an ambassador, do you think that we ought to have a British subject paid and in a proper position to represent British interests?—I think it would be preferable if we could find an Englishman, and if you paid him. I think, of course, that it is always better to have an Englishman than a foreigner.

29,565. (*Chairman.*) Would it be preferable to have the special interests of our countrymen in those places looked after by one of the secretaries or commercial attachés connected with the embassy; is there any advantage, for instance, in having a separate paid consul at Vienna?—No, I do not see that there is. It simply amounts to this, that it is an advantage to their general position in life to be called British consul or consul-general, while it suits us to get their services for nothing.

29,566. (*Mr. Maclure.*) They wear a uniform, do not they?—Of course, they have a right to wear a uniform.

29,567. Do I understand you that it is desirable, in your opinion that a British subject should be the consul-general wherever there was a minister or an ambassador?—I do not know that in these great places, such as Berlin, we should consent to have a consul-general unless we could get one who would do the work for nothing, because Berlin is not a seaport, there is no shipping to be attended to, and that is the main duty of a consul, the business there would be done very simply by the embassy staff.

29,568. (*Mr. Lawson.*) You have some experience as I know with the consular service in Turkey and the Levant?—Yes.

29,569. I think that a member of your staff at Constantinople always has charge of the school of student interpreters?—Certainly, the head of our chancery has charge at present of the school of student interpreters. But I believe that school is going to be brought to a close.

29,570. We had not heard of that?—I am under the impression that it is not to go on.

29,571. Is there any particular reason for that, because I have always heard that it has been a great success?—I should say so too. I should say that it had been a great success and I imagine that we regret very much at Constantinople that it is going to be brought to an end. I do not know the reason why. Everything is done for economy as much as possible, of course it is an economy to shut up that school, but it has certainly done very good work indeed, and it has turned out most excellent young men who have had the posts given to them of vice-consul, and with the prospect of rising afterwards to be consul in the east, owing to the great knowledge of the languages which they have acquired from having been brought up in this school. In fact the school was like a little university in that way. they had to pass out of it before they became qualified to be under dragomans or interpreters or vice-consuls.

29,572. You have given some of them a fair trial by this time, have you not?—Yes, I think we have given them a fair trial, and very excellent young men they have proved themselves to be.

29,573. Of course they have been political officers to a certain extent as well as commercial consuls?—Yes, they have to a certain extent, they work in the dragoman's department in the embassy.

29,574. Do you believe that by the system of open competition from this school you have got as good a class of men as you could want for the work?—Yes; I do not think you can have better men than have been turned out from that school. A great deal is to be said for the superintendent who is our head second secretary, Mr. Lowther. He has taken the greatest interest in it and worked very hard in the school. Of course it is like the headmaster of a school, the success of a school depends a great deal upon who the schoolmaster is.

29,575. You do not know any reason except the obvious one of saving, which may be an economy, for closing it?—I know of none. Speaking for myself I think that it is very regrettable that it is about to be closed. I believe it is the intention to close it.

29,576. Is there any cessation in the demand for this class of man as consul, or do you think we need him as much now as ever?—As much now as ever, I think. One of them, a very able young man indeed, is acting at the present moment at Sophia.

29,577. And you have one at Adrianople, too?—We have one there also and another at Smyrna; and also one of our very best dragomans comes from that school.

29,578. Supposing the school is closed, by whom would the consulates in Turkey and the Levant be filled?—They would have to be filled, I suppose, as formerly by Levantines instead of by Englishmen.

29,579. I have seen retired officers and men of that class filling some of the posts?—Filling the higher consulates?

29,580. Yes?—These young men could not possibly have filled the higher consulates yet.

29,581. They were training?—Yes, in fact it was a sort of Levantine consular service.

29,582. A special service?—A special service.

29,583. You will have to revert to the old order if this school is closed?—Well, I presume so.

29,584. Do you believe that up to the present you have got from these men, when they have been appointed vice-consuls, as good commercial information as is wanted in England?—Certainly; I think they are quite as good as the consuls who are appointed from another class; they naturally would be because they are better trained.

29,585. But they might not necessarily have had any commercial knowledge?—No, but probably as much commercial knowledge as most consuls have. I do not know that consuls have any special commercial knowledge, they have to do with shipping principally, that is their chief, and of course it is a very arduous duty. Our consular service is harder worked than any other.

29,586. There has been no complaint of these men on that score?—No, certainly not; I have not heard of any complaint of them on any ground at all, on the contrary they are admirable young men and a great success.

29,587. Of course the Turkey and Levant branch is distinct as well as the China and the Japan branches of the service from the rest of the consular service?—Yes, under the capitulations which give our consuls more work to do, work of a different kind I mean, than is the case with countries which are outside the capitulations.

29,588. Do you believe that these men thus trained could be used for diplomatic as well as for consular work in the future?—If they turn out great men like Sir William White they will, but of course it will depend upon their individuality. Naturally they would not go on like an ordinary average man in the diplomatic service, getting up slowly by degrees in the way of seniority, that they never could do, because they would not belong to the line. If they displayed great talent, great ability, great industry, then doubtless they might be placed in our service, as has been done in the case of Sir William White.

29,589. In Turkey in the past, consuls have had, and possibly may have in the future, opportunities of distinction which have not presented themselves elsewhere?—That is so, owing, in a great measure, to the creation of the small Balkan kingdoms.

29,590. And in Asia Minor the same thing may occur?—In the East, generally, a man has more power, and more chance of distinguishing himself than in any other part of the world.

29,591. Do not you think that that in itself would have a healthy effect upon the service?—To a certain extent.

29,592. Cannot you believe that the absence of these chances of distinction and of promotion in the rest of the consular service has a mischievous effect?—The fact is that we do not as a rule approve, except, perhaps, in the East, of consuls becoming too political. We like them to keep themselves to their consular work, because that very motive of wishing to rise out of their own sphere makes men dabble in politics very often where they would be much better employed in their consular work, and sometimes this creates mischief too. An embassy never encourages consuls to mix in politics more than is necessary.

29,593. Yet you do encourage your diplomatists to take as much commercial work as they can?—Yes, the general commercial business of a country. Of course, a consul can only report on commercial matters from his own port, whereas the secretary of the embassy reports on the general commerce of a country.

29,594. His reports are local, and yours are general?—Exactly.

29,595. Then you do not believe (even keeping the limitations of work in the consular service if they are advisable) that it is possible elsewhere in the East, to make any very great interchange of duties or of posts between the two services?—No. I do not think so, we, ourselves, should not like to leave diplomacy in order to take a consular post.

29,596. But it has been represented to us, it was by the last witness, Mr. Howard, that married men, especially in your service, sometimes find it inconvenient to make sudden changes from one part of the world to another; a consular post has the advantage of permanency?—Of course.

29,597. Of course not absolute, but probable permanency; do not you think that would persuade some?—That is a strong inducement no doubt, but it is not a sufficient consideration to make a man go into the consular service from diplomacy. You see a comparatively young man, like a third or a junior second secretary, could hardly expect to be given a good consular post, and as regards a senior second secretary or a secretary of legation, a man of that standing would prefer waiting for a higher diplomatic post in compensation for the inconvenience he had undergone and the amount of private fortune he had sunk in the earlier stages of our service.

29,598. Quite so, but at the same time it is to a certain extent a matter of etiquette, is it not; I mean to say that the two services are not on the same social level?—Not quite, although I have the greatest respect for the consular service. I think that it is generally understood throughout the world, not only with us, but throughout the world, that the diplomatic profession socially speaking differs from the consular.

29,599. But if it is, as in the French service, more on an equality, would there not be less difficulty of transfer?—Yes.

29,600. If there were not the same social inferiority?—No doubt if you could introduce an amalgamated consular and diplomatic service naturally we should be just as glad to go to a good consulate as to go to a diplomatic post. I may mention that at present some of our diplomatic representatives are at the same time consuls, or rather consuls-general.

29,601. (*Mr. Hanbury.*) Could not that system be extended in Europe if the consuls were a different class of men?—There would be only one in each country. For instance, our representative in Peru is not only minister but he is also consul-general.

29,602. (*Mr. Lawson.*) And Mexico?—Yes, and Mexico too, and many other places, the reason being that there are certain acts which under Act of Parliament only a consul can perform.

29,603. (*Mr. Hanbury.*) What I want to get at is this. Supposing the consuls were of the higher class of men

Mr. E. D. V. Fane.

7 Mar. 1890.

would it be possible with advantage to the diplomatic service to give them more political work than they have at the present moment?—Do you mean to say bring them into our service?

29,604. They must be able to collect not only commercial information but political information?—I do not see where the advantage would be, because we have at present everything that we require in the way of efficient men and well educated and well conducted men.

29,605. But those men are all at one spot at the capital?—Yes.

29,606. Would not it be an advantage if you had, as it were, branches of your diplomatic service at the various consulates so that you could get political information from the different portions of the country and not only from the capital itself?—The consuls do send us political information in Turkey.

29,607. I am not talking of Turkey, I am talking of the world generally?—Political information is hardly acquired in most other countries, except in the capital itself. It can be obtained there and there only because everything is so centralised. Even as regards the United States, the general politics of the country centre at Washington.

29,608. (*Mr. Maclure.*) We know, and I think you will admit it, that the hand of every country that you have been connected with is practically against British industry; that is, they put a tax upon British industry in every way, do not they?—Yes, certainly, except that Turkey is most liberal.

29,609. In every other place, we will say such as Bordeaux, Boulogne, Berlin, anywhere you like to name, when you get these, it is as I have said. Having regard to that, I again repeat the question which I put to you; would not it better to have a number of consuls belonging to the diplomatic service who would be able to watch British industry without any personal interest of their own, and to report to the Foreign Office, and to belong to the Foreign Office themselves, instead of belonging to the trades with which they are connected?—You will excuse me, but our consuls are not allowed to trade.

29,610. You say they are not allowed to trade, but I tell you that they do trade?—Of course, I was referring to consuls in the receipt of salaries. Those who are unsalaried would naturally be at liberty to trade.

29,611. Paid consuls are not allowed to trade?—Paid consuls are not allowed to trade.

29,612. I still come back to the question that I asked. Would not it be better that these consuls should all belong to the Foreign Office?—I think that if there were an Englishman and a foreigner in the case which you cited at Berlin, I would always take the Englishman in preference to the foreigner, if we could get the Englishman to do the work for nothing.

29,613. (*Mr. Lawson.*) You have had experience of a great many countries where the language is excessively difficult, do not you think that it would be an advantage very often in the embassy or legation to bring in men, such as consuls often are, with a very long experience of the country and a thorough knowledge of the language?—Yes, it is always useful to have at your command men who possess a thorough experience of the county and a perfect knowledge of the language, and, certainly the consuls acquire the language very soon, for this reason, that they find they cannot carry on their work until they have learnt it.

29,614. I am thinking of their entering by way of transfer into the diplomatic service, and placing that local knowledge at your disposal to a fuller extent than they can do now, and also of the reciprocal effect upon the diplomatist, that is to say, if they were for some few years at consular posts they would obtain local knowledge and a mastery of the language?—Yes.

29,615. Can you see that there would be some advantage in that?—Yes. I only mean, however, to this extent, that the young diplomatist would more surely conquer a difficult language.

29,616. I understand you to be against it generally?—Yes, I am against it generally, certainly.

29,617. (*Mr. Harvey.*) A large portion of the work given to a young diplomatist is necessarily, is it not, of a very mechanical character?—Yes, certainly; it is copying out despatches and the enclosures.

29,618. If that goes on for a considerable length of time, it must tend to weaken a man?—Yes, but it does not go on; if it went on always a man would become merely a copyist and nothing else.

29,619. Would not it be more likely to develop the higher qualities mentally in a man if, the service being amalgamated, the time which is now occupied by these dull and mechanical and routine duties was employed in the duties that are now given to a consul. As a matter of fact, do not the duties of a consul or vice-consul require higher gifts, more knowledge, more commercial attainments than the work of a young diplomatist?—Certainly they do. I mean in this way, that a consul has always to think for himself, and usually to act on his own responsibility, whereas that is not generally required from a young diplomatist.

29,620. Then to the extent that that goes is not that a very strong argument in favour of an amalgamated service?—The diplomatic service is entered by people who do not wish to go into the consular service, who go into that particular service who are anxious to remain in it, and who must go through its training. It is necessary that they should go through this clerical work; but they see all the correspondence which passes between their chiefs and the Foreign Office, and are thus able to perceive the political views of their superiors. In this sense their work is not merely mechanical, and because for the time they are only copyists, it does not follow from that that they are not improving themselves and training themselves towards holding higher posts afterwards.

29,621. Still you would be of opinion, would you not, that any system which minimises the amount of time that a young man had to give to that kind of work was on the whole a better system than one that did not?—Yes.

29,622. Suppose, for instance, the conditions for entering the consular service were the same as the diplomatic service, that is to say, that there was one amalgamated service, and that every man on entering that service passed through the commercial department of the Foreign Office, and then became in due time a consul, and so rose gradually according to his ability; would that not practically diminish what I understand to be one of the greatest troubles of the diplomatic service, the inordinate amount of time that has now to be given by young diplomatists to dull and mechanical duties?—According to that the consular employé, so to speak, would do the work that the attaché does now.

29,623. A suggestion has been made to us on very high authority for a complete amalgamation of the three services, the service of the Foreign Office, the diplomatic service, and the consular service; the point I want to bring very clearly out is this, given, as we have had it in evidence, that the large amount of dull and uninteresting work that has now to be performed by a diplomatist is one of the grievances of the service, would not the tendency be to diminish that very much if you had an amalgamated service embracing the whole of the duties now performed by the Foreign Office, the diplomatic service, and the consular service?—In the Foreign Office as in diplomacy so in these consular establishments all the young people would have to go through this ordinary routine work when they first enter on their service. They naturally must, somebody must do it, and, of course, it is the youngest who is the right person to do it. Neither in the Foreign Office nor in the consular service are, as a rule, the young clerks given responsible work to do; naturally the ordinary kind of business is entrusted to them, but it is a mistake to suppose that our young men in the diplomacy have not, occasionally, entrusted to them tasks of a fairly important kind. We seek occasions to employ our young men in that way in order to train them. For instance, we send them sometimes to see a foreign minister on a particular subject, or we detach them on some special duty. A case occurs to me at this present moment. One of the cleverest men in our service who belongs to the embassy at Constantinople has been sent to Bucharest to hold the place there during the absence of the minister.

29,624. Would you say that the ordinary work of a second secretary at an ordinary embassy was up to the level of the work of a vice-consul at a populous port?—Do you mean to say in the amount of work or in the quality of work?

29,625. In the quality of work. I mean by quality the power of initiation, decision, and knowledge?—

Not in all the legations, but certainly in the embassies he has a higher sort of duty to attend to than any consul would have. Take Constantinople, for instance, the second secretaries there, especially the senior second secretary, has an immense amount of responsible work which requires the exercise of great thought and judgment.

29,626. What kind of work?—He conducts the whole affairs of the chancery; he drafts despatches on minor subjects, of course not on the most important subjects. Then he has to keep order amongst them all, and to put into working trim the instructions which are sent down to him from the ambassador.

29,627. Is not his work primarily work of record?—No, that falls more on a junior man on the staff; a junior man attends to the registering of the papers, numbering them, docketing them, and so on. In a large embassy like ours that falls on a junior second secretary rather than on a senior second secretary. The senior second secretary is a sort of navigating officer as it were.

29,628. Does he have to draft minutes on his own initiative, or does he merely formally have to put in shape minutes, the substance of which has come down to him from his minister or his ambassador?—No, he has very often to initiate them himself. He suggests something in order to save the ambassador trouble. He will put on the docket of a despatch something that he proposes should be done to it. There is such an enormous correspondence in a place like Constantinople that you will do everything you can to save the ambassador trouble; and therefore that is always done. Something is written on the docket, it is called minuting, suggesting the line which should be taken by the chief in that particular matter.

29,629. That then goes up for the chief's sanction?—Yes; and instead of having to think for himself how he should deal with some simple matter of business, he looks on the docket to see what is suggested in the chancery, and he approves of it, or he does not approve of it; most of them of course he approves. Then he initials the paper and it comes back to the chancery and the orders are carried out. When the orders are carried out, it is the man down below, it is the second secretary of whom we are talking who drafts the letter or despatch and sends it up for the approval of the ambassador, because the ambassador himself does not take the trouble to do all those small things, it is as if you were giving an order to a secretary to carry out such and such an instruction.

29,630. Still, we may fairly conclude, may we not, that the work done in a well organised consulate is quite equal, except in matters of the highest moment, which are probably the business of the ambassador himself, to the ordinary work done in an embassy?—Yes, I should think it required just as much mental power, but it is of a totally different kind, because the consular is purely shipping and trading business, whereas ours, of course, is rather of a political character.

29,631. Would not the shipping and trading business probably include some of the most vital and difficult questions with which a man may have to deal?—Certainly; but then you see it is the routine work in shipping which the consul attends to more than anything else. He does not, as a rule, enter into great commercial questions, I mean to say questions connected with commercial treaties and questions of that sort. Our commercial policy with a foreign country he would have nothing to do with.

29,632. Suppose a question of that kind coming before the embassy, would not the embassy, as a matter of fact, always consult and be in perfect accord with the consulate?—Yes, if a consul reported to us and asked instructions on a commercial question if we had an opportunity of consulting him, that is to say, if he happened to be near, we should be always very glad indeed to see him about it.

29,633. Would you say that the commercial experience of an embassy was ever on the same level as the commercial experience of a consulate?—The commercial experience required in an embassy is of a different character to that required in a consulate. I may mention that I, myself, at this present moment am the British delegate for revising the treaties of commerce with Turkey. I have associated with me other people, but I am the principal delegate.

29,634. In a matter of that sort which I take to be a matter involving considerable experience, great knowledge of tariffs, and of local habits and customs, and so on, do you call the consuls into consultation with you?—We should not have to deal with the local tariffs but with the general customs tariff of the country which, of course, we should know about quite as much as the consul at some distant port would, or at any port. It is our duty and business to know it because we report home to the Foreign Office every change that takes place in foreign tariffs, in fact all commercial matters of that sort pass not through the consulates but through the embassy.

Mr. E. D. V. Fane.

7 Mar. 1890.

29,635. Does not the knowledge of all customs questions necessarily arise at the port in a sense with a distinctness and directness with which they cannot arise with you at the capital?—If there is any dispute at a seaport about the payment of a customs duty the man who was aggrieved would naturally go first, I suppose, to the consul at the port and try to get his grievance settled there, but supposing it could not be arranged there with the customs authorities of the place, then the matter would be referred to us at the capital in order to see what could be done by us because it always ends in a diplomatic question. If there is a cause of complaint a consul cannot complain to a foreign government, he has no power whatever of complaining to a foreign government, it always has to be done through the representative; in fact through the legation or the embassy.

29,636. But if you had a complaint from any British merchant with reference to any question of tariff would you not naturally feel that the consul of the port had a much better opportunity than you could possibly have of coming in contact with all forms of British opinion on that question?—Certainly; as regards the particular port.

29,637. Then does it not come to this that the commercial knowledge, the commercial traditions—all the questions connected with the tariff must be as I say better known—at the consulate than at the embassy?—Do you mean the practical effect of the tariffs?

29,638. Certainly?—Certainly, at first hand, it would be better known. I may mention with regard to the the business that I am concerned in myself which has been entrusted to me at Constantinople, that of negotiating with the Porte for the revision of the commercial treaties, that the second delegate who is associated with me is Mr. Wrench, who is our consul at Constantinople. No man has a greater experience than he has with all questions of commerce in Turkey, because he has been such a long time at Constantinople; but supposing he was the consul say at Smyrna or Beyrout we should not necessarily send for him to help us in a matter of this sort. We only employ his services because we happen to find him at Constantinople. He is there at Constantinople, and from his long residence at the Capital he has a great acquaintance with Turkish tariffs, commerce, and shipping, and therefore we are very glad indeed to have his assistance in this particular business, but we should not send for a provincial Consul to assist us in a matter of this sort.

29,639. Did you pass any time yourself in the commercial department of the Foreign Office in the earlier stages of your diplomatic career?—No, I have never had any opportunity of doing so.

29,640. Do not you think it advisable that all second secretaries, that all the men in the diplomatic service should pass through the commercial department?—Yes, I agree with you.

29,641. You think they should?—I think it would be a very good thing if they could. The only thing is I do not know whether they would have room for them all. They have to pass six months in the Foreign Office in which to prepare themselves before they are received into the diplomatic service, and as I understand it, your suggestion is that in the course of that six months they should pass a part of that time in the commercial department.

29,642. Yes, or even more than six months?—I think that your suggestion is a very good one.

29,643. Have you made it part of your business to look at the various consular reports that we have from all the British consuls?—I only read the ones that refer to Turkey.

29,644. Those, of course, come from the group of consuls who were appointed under the open competition system?—The student interpreter school that I spoke of has only been going on for a short time, and only young men have been turned out of it, and

Mr. E. D. V. Fane.

7 Mar. 1890.

therefore it has not had any effect yet as regards the higher posts of consuls and consuls general from whom the consular reports proceed.

29,645. You have expressed a very favourable opinion with reference to the student interpreter; have you formed any opinion as to the general consuls, the consuls outside that special arrangement?—Yes, they are all good men, I think. We are all very satisfied with them. I think that our consular service is one that we may justly be proud of. I think that it is a very efficient service. It, as I said in one of my previous answers, has much more work to do than any consular foreign service.

29,646. That it naturally would have, would it not, because of our greatly extended trade?—On account of our immense trade and shipping.

29,647. Do you think the present mode of entry into the consular service is all that can be desired?—I am not a good judge. They enter candidates up to 50 years of age, and the examination really amounts to nothing. But I beg to repeat that our consuls are, generally, admirable public servants.

29,648. (*Chairman.*) Is there any other point which you would like to mention?—I was anxious if I had been asked a question on the subject, to say that I think as regards the diplomatic pensions we ought to be treated by the Treasury, I will not say with greater liberality, because we do not ask for liberality, but with what we would consider is more fairness perhaps. I refer to the Act of Parliament which governs the diplomatic pensions, and I am only speaking of diplomatic pensions of the fourth class, which are the only pensions to which men of my standing would be entitled, that is to say, men who are secretaries of embassy or legation and who have served a matter of 30 years abroad.

29,649. What is the point where you think the Treasury does not act, as you say, very fairly towards you in respect of the fourth-class pensions?—The Act of Parliament empowers the Treasury to grant pensions to men of my class on the recommendation of the Secretary of State after 15 years from the date of the first commission. Of course no one wishes to claim that unless he is completely broken down in health. What we do think is that after a man has been a great number of years, say 30 years for instance, abroad serving in different climates, and been put to a great deal of expense and hardship in life, he should be allowed to retire and come under this clause after the expiration of 15 years from the date of his first commission and say a certain number of years, 10 or 15 or so, in addition to that 15 years, bringing his whole length of service up to a matter of 25 or 30 years.

29,650. Do you mean that he should be then entitled to demand some pension from the Government?—Yes.

29,651. In respect to the whole period if he choose to retire?—In respect to the whole period when he gets to a certain age, but we ought certainly to have relief under this clause, because Parliament could not have intended that it was to remain practically a dead letter.

29,652. What is the practice of the Treasury now?—I believe that they place great difficulties in the way of giving pensions to any of us however much our services may justify them in giving the pension, they simply read the clause: "The Treasury *may* grant pensions "during life on the recommendation of the Secretary "of State," and on that reading they hold that it is absolutely in their discretion as to whether the pension shall be granted or not. Our feeling is that it is rather the Secretary of State who ought to be the judge as to whether a man's length of service entitles the Foreign Office to ask for his pension, and that the Secretary of State having asked for it the Treasury ought, unless there be some clear and palpable abuse in the matter, as a general rule, to grant it. There is such a block in the diplomatic service at present that the juniors despair of ever rising to the higher posts. That state of things is detrimental to the efficiency of the service, and is caused in a great measure by the reluctance of the Treasury to grant these fourth-class pensions.

29,653. Then would you propose a limit of age or a limit of so many years service?—I think something of that sort may be done, they might say that a man over 50 years of age and after 30 years of service, or some such limit, should be entitled to a fourth-class pension on the recommendation of the Secretary of State. The junior members of the Diplomatic Service are very inadequately paid. Our salaries amount to a very small portion of our expenses, but we have always looked forward to this pension as being a part of the compensation given to us by the public.

29,654. You represent, as I understand, that it is the general opinion amongst the gentlemen of your profession that the Treasury is rather hard upon you, and that instead of accepting the recommendation of the Secretary of State for Foreign Affairs the Treasury is rather apt to say that they have got a will of their own?—That is exactly our position.

29,655. What would be a fair proposal which you think would be likely to pass Parliament; what limit do you suggest, do you think anything short of 60 years of age?—Take the Indian Civil Service as a sort of type to follow. The salaries in India are very fine ones; public servants are able to live on their salaries in India, which, of course, is not at all the case with us in the diplomatic service. They are far more comfortably off than we are, because they are mostly in one settled place instead of having like us to constantly move from post to post. After 25 years, four of which are on furlough, they are able to retire on a pension of 1,000*l.* a year. We do not ask for so much as that, we simply ask for a fourth-class pension, which cannot exceed 700*l.* a year, and is very often only 500*l.*

29,656. (*Mr. Harvey.*) You know, of course, that 60 is the age in the home service?—That has always been the rule as regards the home service, but it has never been the rule with us, and our kind of life is very different from that of the civil servants at home. I mean that it is one of ex-patriation and of greater hardship. The principle recognised by Parliament, as with the Indian Civil Service, so with ours, is that service abroad should count towards a pension more than service at home, and that is the reason why we become qualified for pension at an earlier age than is the case with the civil servants who are not required to live out of England.

29,657. (*Chairman.*) Your view generally is, I think as I put it to you before in summing up, that your grievance is not with reference to the amount of the pensions, but that there ought to be some age, combined possibly with some period of service, at which time any person who has been abroad for that period might be entitled to claim to retire on some pension?—Yes.

29,658. Instead of its being left, as it is now, on the recommendation of the Secretary of State, entirely optional with the Treasury to grant a pension?—Yes.

29,659. Are there no instances in which the Treasury have given fourth-class pensions within 15 years from the date of the first commission to men, we will say of 50 years of age who have served only 15 years from the date of their first commission?—Not for the last 10 years, that is to say, since 1879. In that year there were two cases in which pensions of the fourth-class were granted to men who had served only 20 years altogether, and only 15 years from the date of their first commission, and both of these men were, I believe, under 50 years of age.

29,660. (*Mr. Harvey.*) Has there never been a fourth-class pension granted?—A few have been granted.

The witness withdrew.

Adjourned.

EIGHTY-SEVENTH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, March 13th, 1890.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN, K.C.B.
Mr. J. CLEGHORN.
Mr. H. L. W. LAWSON, M.P.
Mr. H. WALPOLE, C.B., *Secretary*.

Mr. WILLIAM WARD called and examined.

Mr. W. Ward.
13 Mar. 1890

29,661. (*Chairman.*) You are consul, I believe, at Bordeaux?—Yes.

29,662. Would you be so kind as to inform the Commission what experience you have had as consul, and at what places you have held the appointment?—I began as secretary to the consul-general at Hamburg, where I was about six years; after that I was appointed vice-consul at Memel, in East Prussia, where I was five years; after that I was appointed consul at Bremen, in Germany, where I was nine years; after that I was consul at Portland, Maine, in the United States, for two years; and now I have been consul at Bordeaux, in France, for seven years.

29,663. Therefore, you have had nearly 30 years experience in the consular service?—Yes; but perhaps you will allow me to observe that I have only held the Queen's commission for 24 years. When I was secretary to the consul-general, I had no commission from the Queen.

29,664. Then your consular service dates from your appointment to Memel?—Exactly.

29,665. Perhaps I may ask you generally about the consular service, what suggestions occur to you as recommendations that might be made for the improvement of the service; have you any points upon which you would like to say anything to the Commission?—I do not think there are any improvements to be made in the way consuls are appointed, except that perhaps it would be a great advantage if consuls, before they were definitely appointed, were given about a year's time in the Foreign Office to do their work there, and were then only definitely appointed. It would then be seen by the permanent officials in the Foreign Office whether a man had the general qualifications for holding the post of consul abroad, which now I do not think is sufficiently possible. A vice-consul or a consul is at present very often hardly known to the Secretary of State or to the Foreign Office generally.

29,666. When you were appointed, did you spend any time in the Foreign Office yourself?—I spent about two months there.

29,667. Was there a commercial department in the Foreign Office at that time?—No, there was no commercial department; it was the same as the consular department, as far as I recollect.

29,668. Then you are of opinion, as I understand, that a consul might usefully spend some of the time before he gets his commission in the service, in the commercial department of the Foreign Office?—In the commercial department and in the consular also, because the routine work has to be learnt in the consular department.

29,669. Have you anything to say upon the examination for the appointment to consulships?—I think the examination as at present conducted is, as far as examinations go, all that is necessary. I do not think the qualifications of a consul can be well ascertained merely by examination. I think the special qualifications of a consul can only appear when he reaches his post, after learning, of course, the routine duties.

29,670. Some suggestions have been made to us with reference to introducing some scheme whereby there might be generally more promotion in the consular service. It is said that there is no ladder in the consular service; is that what you have found to be your experience?—Yes, I think that is so. I think it would be of great advantage if there were a ladder, but still I do not see quite how it is to be done, because the various posts require various qualifications, and it is very difficult, in consequence, to have promotion such as there is in other services.

29,671. Then no suggestions occur to you whereby something of that sort might be done?—I am afraid there is no possibility of making a general rule.

29,672. The suggestion has been made that subject to financial considerations, there might be more introduction of gentlemen who, like yourself, have the whole career of a consul before them, that there should be diminution in the number of unpaid consuls, and that more young men should be introduced who are likely to be *consuls de carrière*?—I think the scheme was proposed many years ago, but it was found, I believe, that it would hardly work well in Europe, that is, apart from the East. The number of posts in Europe is very small, and the young men who would have to act as consular pupils would probably have to wait a very long time before they received an appointment, and, on the other hand, they would be a considerable burden to the consul who had them under his supervision. I further do not think that it would do at all to appoint very young men even to vice-consulates; they would, therefore, have to wait a long time before they could be considered fit to hold an independent position, even as vice-consuls.

29,673. Have you considered whether there might be any amalgamation, and, if so, how far there might be some amalgamation between the consular and diplomatic services?—I think that amalgamation might be managed in large ports where the courts reside, and where there are legations. I think that one of the secretaries of legation might possibly hold the post of consul, as is the case at Paris, though that, of course, is an inland town. I think in that way it might be managed in some places, but I do not think the amalgamation generally is advisable, because the duties are very different.

29,674. We have had some evidence as to the practice in the French service. We have been told that young men entering for a career, either as consul or as diplomat, practically have the same kind of training during the time that they are in the French Foreign Office; in the one case, perhaps rather more attention being given to commercial subjects, and in the other to political subjects. We have also been told that it is practically the same class of young men who enter for both services. Have you anything to say upon this practice?—Yes; I think the consequence in the French service is that the consuls care really comparativel ess about commercial subjects than political ones.

29,675. That is a point upon which I was just going to ask your opinion. Having lived in France, what do you think of the effect of that practice of the French Government upon the consular service?—Of course, living in France, I do not come across French consuls; French consuls are naturally in other countries. In Germany I have come across many French consuls—in Bremen there were several. Having seen what they were doing, I certainly think that they cared comparatively little about commercial matters.

29,676. Do you think they were mainly political?—I think so.

Mr. W. Ward.
13 Mar. 1890.

29,677. Your work at Bordeaux, I suppose, is purely commercial?—Not purely; we have duties of other kinds also, and we are to report, if necessary, upon political subjects of any great importance.

29,678. That is under special directions from the embassy at Paris?—Yes; or the Foreign Office.

29,679. What are your relations with the embassy at Paris?—My relations are these: that in any case of reporting anything of importance, whether it is commercial or political, or on any public event, I would send the reports to the Foreign Office through the embassy at Paris, or merely to the embassy.

29,680. Under the general instructions to consuls, I presume. I think that those directions comprise specific orders as to making reports, do they not?—Yes, they do.

29,681. Is it the case that you have now more demands upon you, more requisitions for reports, and for information useful to trade, than you used to have when you first entered the service?—During the last four or five years, I should say, a great many more.

29,682. Do you get a good many communications direct, where you are stationed, from English traders for information?—A great many; I would say at least two every day.

29,683. A great many more than was formerly the case?—A great many more.

29,684. Do you find, after you have prepared reports which have been sent home, and published in the way we know that they are published, that you get many communications from any source with reference to the suggestions and ideas that occur in your reports?—Some, I will not say very many.

29,685. With reference to the age of admission to the service, I believe now it is between 25 and 50, is it not?—Yes, 25 is the minimum.

29,686. Have you any suggestions upon that point, or do you think that limit should be maintained?—I think 25 is the very lowest age that should be allowed. I should rather have it higher than lower.

29,687. What do you say about the suggestion that there might be more consuls-general, or more commercial attachés. Look at the position of Mr. Crowe, of Paris; what effect has that upon the consular service generally. Does his appointment help the consuls in France?—I think that having the commercial attaché in Paris helps us, and we help him. If he wants information upon France in general, he collects it from the consuls in the various parts of France, and can report it in that way, but the help is more to the embassy than to the consulates.

29,688. Does the commercial attaché go round much; have you seen him in Bordeaux?—I have seen him once in Bordeaux since I have been there.

29,689. Of course he has the whole of Europe, except Russia, to attend to?—Yes, but of course, being in France, his eye is chiefly upon France; it cannot be otherwise.

29,690. From your experience in the consular service generally, do you think there is any truth in the statement that the service is rather at a standstill; that a man has hardly sufficient inducements to do exceptionally meritorious work, and that there is a want of encouragement in some way?—I am afraid that is the opinion of most consuls, as far as I know it.

29,691. The suggestion has been made that some personal allowances in some form or other might be put at the disposal of the Foreign Office, for rewarding exceptionally meritorious service on the part of consuls. I suppose you would see no objection to such a proposition?—I should think that would be a very good idea, as it is impossible to promote everybody, and to give to all, the best places; there are so very few of them.

29,692. Do you attach great importance to a consul being kept for some time in a post where he has acquired a special knowledge of the language and of the population, or do you think that more frequent changes might promote the interests of the service?—Our system is a very good one, as far as I can see. Our consuls remain on an average about 10 years at one post. I think the French system of changing so very often is a bad one. I do not think you can become acquainted with the laws and the condition of the country in so short a time.

29,693. Then you do not favour at all any idea of extending or introducing a system whereby men might move from the diplomatic to the consular, and back from the consular to the diplomatic service, as they do in France?—I do not think it would answer well.

29,694. Do you think there might be more grouping of districts, say, that the countries speaking languages founded on the Latin might be formed into one group, in which there should be more recognised promotion according to the importance of the posts?—The number of paid consuls in Europe is so small that I am afraid it would be impossible to group them. When I say Europe it is excepting the East.

29,695. (*Lord Lingen.*) You have served both in Germany and in France as consul?—Yes.

29,696. I suppose you are able to speak both French and German?—Yes.

29,697. It would be almost impossible, I suppose, for a consul to discharge his duty without a tolerably familiar knowledge of the language of the country that he was in?—I think it is quite impossible.

29,698. Do you think that in the appointment of consuls a knowledge of the particular language of the post to which the consul is assigned is sufficiently insisted on at the Foreign Office?—I am really not able to say whether that is so.

29,699. I suppose France itself is just the country in which you would not be able to compare French consuls with English ones?—Not exactly, because we only see the French consuls in other countries.

29,700. Are such French consuls as you have seen in the course of your service, well qualified for their posts, should you say, in point of knowledge of language and knowledge of law?—I think in point of law, certainly, but in point of languages, not so well.

29,701. I rather understood you to say, that although you did not see your way to an amalgamation of the consular and diplomatic services, you yet thought that at some of the more important posts the attachés from the embassy might be employed as consuls; did I hear rightly what you suggested?—I think that what I meant was, that where the legations were situated at large ports, for instance, at Rio de Janeiro, at Lisbon, and other places, the consul might be secretary of legation or the secretary of legation might be consul at the same time.

29,702. I think they have got a consul at Paris, have they not?—Yes.

29,703. Might the consular duty at Paris be undertaken by the ambassador's staff, do you think?—The consul at Paris holds the rank of second secretary of embassy at present.

29,704. In Paris the appointment of consul is held by a diplomatic officer?—The two positions are amalgamated into one, but of course, I may add, the consular duties at Paris are very different from what they would be at a port.

29,705. Now I will come to the question of grading the service, if it can be done so as to recognise length of service and merit. Of course the first objection to that is, that you might have a very highly-paid officer at a comparatively unimportant station if he had remained there long enough. I notice that in France itself, excluding the colonial appointments like Cayenne and Réunion, there are some posts that are better paid than Bordeaux. For instance, Algiers (which we might consider pretty much the same as France) is better paid than Bordeaux, and Marseilles is better paid than Bordeaux, but those seem the only two posts, to take yourself, to which promotion would be open to you in France with any advantage in the consular service?—Exactly, but I should not look upon the fact of being sent to Marseilles as a promotion merely because the salary is higher. Marseilles is a more expensive place and that is the reason the salary is higher, not because the post as consul at Marseilles is more important.

29,706. It is not a more valuable position, you consider?—No.

29,707. The appointment of consul, except in the China service, is entirely a matter of patronage, is not it?—It is, so far as I know.

29,708. And, therefore, if there were no qualifications, as no doubt there are, which examination alone does not test, the public, I suppose, have a right to entertain the opinion that the Foreign Secretary would look to those qualifications which examination does not

test, in naming the candidates who were to be examined?—No doubt.

29,709. Have you any sort of court which you hold at Bordeaux; is there any consular court there?—Only what we call naval courts under the Merchant Shipping Act.

29,710. In case a ship is lost?—In case a ship is lost under suspicious circumstances, and in case of very grave acts of insubordination on the part of the crew of a ship or of the master; but we have no right to hold a court over other British subjects not seamen; that right we only have in the East and in China.

29,711. If a merchant vessel were lost in the Bay of Biscay, would it come before your court to inquire whether there was any blame attached to the master, and whether he should retain his certificate or not, in the same way that such inquiries are made before the Wreck Commissioner in England?—Yes.

29,712. You would have to inquire whether he should retain his certificate or not?—We could suspend or cancel his certificate, and we could pronounce an opinion, and that opinion would be forwarded to the Board of Trade, and action would be taken by the Board of Trade in consequence of the decision of the naval court at Bordeaux.

29,713. If sailors had to be detained in order to give evidence in the case of a ship which came before your court, are you the British officer who would detain those sailors until their evidence had been given?—Yes.

29,714. Would you be able to make them such payments as were necessary, in order to secure their attendance?—I am authorised to do that by the instructions from the Board of Trade in grave cases.

29,715. Would the same be the case in a question of salvage?—Yes, the same would be the case there.

29,716. Have you much of that kind of duty?—No, we have it rarely; during the last six years there has been only one case in which a naval court has been found necessary.

29,717. (*Mr. Cleghorn.*) Might I ask what training a gentleman goes through before he enters upon his duties as a consul, or does he go out to his post without any previous training?—I believe the rule is, that he should work for a certain time at the Foreign Office, in either one department or the other, to learn the routine work—the forms of correspondence, and such matters.

29,718. "A certain time"; how long?—As a rule, I believe it is six months, but it is sometimes shortened; after that, he is sent to his post.

29,719. During that period of training, as we may call it, is there notice taken of how he performs his work; is there a case, as far as you know, of a gentleman being found inefficient after that period of probation?—If he is found inefficient, I am afraid it is too late, because he works at the Foreign Office after having received his appointment. If his qualifications turn out to be less than were expected, I do not see what is to be done, because he is already appointed.

29,720. Nevertheless he goes out to the appointment?—The rule is, that he is first appointed and then does the work. The suggestion I took the liberty to make before, was that it would be better to have the work done first, and then the appointment *definitely* made, if the candidate were found well qualified for it.

29,721. You say your reports were sent through the Embassy at Paris; do your instructions from England come through the same channel?—Not generally; they come direct.

29,722. Do you send reports both to the Foreign Office and to the Board of Trade?—Yes.

29,723. And receive instructions from both?—Yes.

29,724. In your experience at various places, have you observed that the consuls of other nations pay more attention to the trade of their own nations, and are more active and zealous in the promotion of the trade of their own country than our consuls; I keep yourself out of the question?—I have never observed that. I believe in every country the press holds up the consuls of other nations as superior to their own, in order to cause emulation amongst their own consuls; but I do not believe it is a fact that any of the foreign consuls do more than our own consuls.

29,725. Then you think there is no ground for the statement or allegation which has been made, that British trade suffers in comparison with the trades of other countries from any negligence or supineness on the part of the English consuls?—I certainly do not think so.

29,726. (*Mr. Lawson.*) Might I take your own case, and, having heard that you entered the service, or rather passed its threshold, as secretary to the Consul-General at Hamburg, ask you how you obtained your first appointment?—The consul-general at that time was my own father, and that is how I was appointed as secretary in the place of the person who had been secretary before. I held the post of secretary to the consul-general for six years, and I received the appointment of vice-consul after those six years from the Secretary of State for Foreign Affairs.

29,727. You entered the consular service as a career; did you pass an examination before the Civil Service Commissioners, according to the rules?—Yes.

29,728. It was what is called a qualifying examination, was it not?—Yes.

29,729. Is there much difference in the examination now from what it was in your time?—I think it is exactly the same.

29,730. Would you call it a very searching one?—I do not think so; I think it is a very easy one.

29,731. An elementary examination?—Yes.

29,732. I suppose, practically, no man who has had a liberal education would have the least difficulty in passing?—I do not think that he would have any difficulty, except, perhaps, in commercial law.

29,733. Did you obtain your training in commercial law from special teaching?—I did obtain it by special study. I studied myself while I was working as secretary.

29,734. This examination is not always enforced, I believe?—No, it is not always.

29,735. Do not you think it ought to be?—I certainly think so.

29,736. Is it not obvious that patronage without any sort of examination is open to—I do not say it leads to—grave dangers?—I suppose so; but I do not see how the appointment of consuls could be made otherwise than by patronage.

29,737. Do you think there ought to be any difference made between two men, by forcing one man to submit to an examination of this kind on entering the service, and exempting another man?—I do not think there ought to be any difference made.

29,738. You have been really passing your life in a group of countries in Western Europe?—Yes, except two years in the United States, and five years in East Prussia.

29,739. Was that promotion, or did you gain an advantage from going over there?—I gained a higher salary, which in itself, during the time I held it, was perhaps not of more value, because the place where I lived was more expensive; the United States was more expensive than Bremen, so 700*l.* there would be about the same as 500*l.* at Bremen, so it was no promotion; but it would have been of great value to me, as far as the pension regulation goes; that is the only value it had.

29,740. Were you asked to go there, or were you sent there?—I was asked whether I would go there.

29,741. You mean you might have refused without doing yourself any harm?—Yes.

29,742. Did you find it any advantage in complying with the request?—No, I did not, except as regarded my pension.

29,743. What point did you go to in the United States?—Portland—Maine.

29,744. Portland—Maine—is a healthy place?—It is a very healthy place.

29,745. Then there did not come into those considerations the want of healthy surroundings, which sometimes determines salary?—Not at all.

29,746. Coming back to France, was that again your own choice?—Yes, I asked to be sent to Europe, if there was a vacancy, and as soon as one was open at Bordeaux, I was offered it, and, of course, I was glad to accept it, as I wished to come back to Europe.

Mr. W. Ward.

13 Mar. 1890.

29,747. During the whole of your career I suppose you have been writing from time to time special reports?—Yes.

29,748. When those are sent in, is any notice taken of them, to you speaking with regard to yourself, personally?—A certain number of copies of the reports are always sent to each consul, and if they are found to be specially valuable, or especially well written, a letter of commendation is written by the Secretary of State to the consul.

29,749. To you personally?—Yes.

29,750. Then you do not only receive praise from your ambassador or minister?—No, from the Secretary of State himself.

29,751. Do you think that at the present time a consul has sufficient opportunities of distinction?—No, I do not think he has many.

29,752. Is it the case that he very often sends in reports which are of great value, and they are abbreviated or incorporated by the secretary to the embassy, and then sent on to London?—No; the consular reports are published separately.

29,753. I know the regular consular reports are. I am talking of a special inquiry as to labour or tariff, or something of that sort, which is made from time to time in the different countries?—In such cases, if the consul sends a specially valuable report, the ambassador or secretary of legation, or the commercial attaché, will invariably mention the fact.

29,754. Then you have nothing to complain of in that respect?—No.

29,755. Your routine work has been much the same, I suppose, in all your posts; varying in quantity, but not in quality?—Very much the same, excepting that in Bordeaux, for instance, there is a great deal more routine work; that is, giving information to the residents, and there is a great deal more correspondence than there was in Portland; also, and a great deal more than there was in Bremen; that depends entirely upon the amount of trade which goes on, and the size of the port.

29,756. It is mainly shipping business, of course?—Yes, chiefly; but also a great deal of notarial work.

29,757. The whole of the consular fees, I believe, were revised last in 1887, and there has been a large increase; has that increase been attended by any friction in working?—No, not at all.

29,758. You have told us that you are sometimes in the habit of dealing with political questions; do you believe that it would be an advantage if the members of the diplomatic service had some experience of your commercial work?—I think it would be of little advantage.

29,759. You do not think then really that there would be much gained if they had to pass a certain time, or if they were in the habit of passing a certain time, in your branch of the service?—I do not think so.

29,760. The French service, we have heard, is an amalgamated one; do you think by that the French consul secures consideration and position?—No, I have not observed that they are more considered than our own consuls anywhere.

29,761. Although, of course, as a matter of fact now they are constantly transferred to the diplomatic service and the Foreign Office, whereas we know that is not the case in our own service?—Yes, they are constantly transferred.

29,762. You have nothing to complain of in that direction; you do not think that makes any difference?—No, I do not think so.

29,763. The only transfers in the English service have been from the very top?—From the very top; from the diplomatic sometimes to the consular service, that is, to the higher posts.

29,764. Not often, and also from the consular to the diplomatic in one or two instances?—Yes.

29,765. You do not look forward to that, I suppose, in your career?—No, we never look forward to that; it is very unlikely.

29,766. And, unless a consul were particularly lucky, he would have no opportunity for showing any special qualification for diplomatic work, would he?—He would have hardly any opportunities.

29,767. Particularly in such countries as France and Germany?—Exactly.

29,768. Do not you think it would be an advantage for the consuls themselves, and that it would also cause them to show even more zeal than they do in the work, if they had a chance of this sort of promotion?—I do not think it would work well practically because the opportunities of reporting on political or diplomatic matters are too rare.

29,769. Then you are in favour yourself, as a consul, of keeping the two services distinct?—Yes.

29,770. As they are now, in fact?—Yes.

29,771. I suppose you have never traded yourself?—No, I have never traded.

29,772. Do you think our regulation with regard to consuls trading, or rather our prohibition, is strictly enforced in the case of the paid consuls?—So far as I know, it is quite strictly enforced.

29,773. You have not heard complaints of English consuls trading?—Never.

29,774. But I believe sometimes there are complaints made with regard to foreign consuls, are there not?—I have never heard of it.

29,775. Do you think the practice is equally well observed in other services?—I cannot say how strict their regulations are, but I have never heard of the complaints.

29,776. I suppose you have never seen anything of your colleagues in the Turkey and Levant, or the China and Japan services?—I have seen two or three in former times.

29,777. As I understand, you have no suggestion to make in respect to the service, other than those I have heard?—The only suggestion that I would take the liberty to make would be with regard, perhaps, to the pension regulations.

29,778. What do you say about the pensions?—I think it would be a very good plan if there could be a uniform scale of pensions awarded to all the consuls of the superior grades. I do not think it is quite fair that at present a man should have a pension which is calculated according to the salary he receives at the post he quits. A man, for instance, who is made a consul in the United States, and receives, say, 1,000*l.* a year, receives that 1,000*l.* because the United States is an expensive country, whilst a man who is made a consul in Europe would perhaps receive 600*l.* If the man in the United States is pensioned, his pension is calculated upon the 1,000*l.*, but the consul in Europe would have his pension calculated upon the 600*l.* Both would retire to England, but one would have the great advantage of having held the post in the United States for a short number of years, and in consequence would receive a much higher pension than the other, in spite of equal length of service.

29,779. As there is really no grading in the consular service, the salary is not the test that ought to be taken?—I do not think so, altogether.

29,780. It depends so much upon the cost of living, and the conditions of the climate, and everything of that sort?—Yes.

29,781. I understand that you think there ought to be a different system?—I think a different system would work well for the consuls, and also financially.

29,782. What would you suggest?—I would suggest, for instance, as it is at present, that after 10 years the right to pension should begin under certain circumstances with 100*l.* a year, and after the 10 years it should rise, say, 15*l.* a year for every year of service—whether a consul should be pensioned after quitting his last post in the United States, for instance, or in France, or in Germany, it should be the same.

29,783. And that could be done, I suppose, without any increase of the total Vote?—I think it would rather decrease than increase the total Vote, and on the other hand it would give most consuls a better pension, although a few would certainly lose.

29,784. (*Chairman.*) What would you fix as a maximum pension, would you follow the analogy of the Diplomatic Service Pensions Act, in so far that you would have a first class pension—that is to say, a consul who had got to the top of the tree—who was supposed to be a high class consul on full service, would receive a maximum pension. Do I understand you to mean that, supposing he left the service from America, or from France, or Belgium, or wherever it was, being understood to be a consul in the highest position

among consuls, he would receive a fixed sum; is that your idea?—I would not have a fixed sum, I would have it rise according to length of service.

29,785. Entirely irrespective of the amount of the salary, but based upon the length of service only?—Yes, I would have it rise by 15*l.* a year.

29,786. (*Mr. Cleghorn.*) What is the age at which a gentleman may now retire and claim a pension?—I believe he is obliged to retire at 70, but he has a right to retire at 65.

29,787. (*Mr. Lawson.*) You have seen, of course, the qualification of consuls in the foreign services: do you believe that the Germans and Russians are very far superior to us in point of linguistic acquirements?—In point of linguistic acquirements I think they are; the Russians doubtless—the Russians have a talent for languages quite inapproachable by any other nation.

29,788. Do you think our consuls are sufficiently qualified in that way?—I think, as a rule, pretty well.

29,789. Would you make the examination more stringent in respect of languages?—I do not think so. I think, so far as my own examination went, that a good deal was required in the way of languages.

29,790. What did you have to pass in?—In French and German.

29,791. Is that usual?—It depends upon the post to which you are appointed; you are supposed to know the language of the post to which you are appointed. A knowledge of French is required generally, and as I was appointed to a post in Germany, I was also required to pass in German.

29,792. (*Chairman.*) I think it is the case that all consular fees now taken are paid into the Government funds, is not it?—Yes, everywhere.

29,793. There is no exception to that rule?—There is no exception at all.

29,794. I think you alluded to the provisions in the Pension Acts which give extra allowances for unhealthy climates; are those provisions, so far as you know, satisfactory?—I believe so.

29,795. (*Mr. Lawson.*) In dealing with unpaid consuls, have you always found that they are ready to help you to the extent which you require?—Generally, yes.

29,796. Sufficiently?—Generally, yes. I have known exceptions.

29,797. (*Chairman.*) Would you be for extending the system of unpaid consuls?—I do not think so.

29,798. That was a recommendation of a committee of the House of Commons in 1872. You would not extend the employment of residents, whether natives or Englishmen, as unpaid officials?—No, I do not think so.

29,799. (*Mr. Lawson.*) Of course they do not give the same amount of work, and they do not take the same trouble about a report?—It is impossible that they should take the same interest.

29,800. (*Chairman.*) Does any other point occur to you, because we should be very happy to hear any suggestion that you can make for improving the service?—I do not think there is any other suggestion I could make, except one which perhaps hardly comes within the scope of this Commission; that is, that I should not be for giving the honorary title of consul, and consul-general more especially, to any trading foreigner. I think it takes away from the distinction of the title: that several trading consuls-general in Europe have that rank given as a mere title.

29,801. How would you avoid doing that?—I should certainly not give them the highest consular title which exists.

29,802. (*Mr. Lawson.*) That of consul-general, you mean?—Yes.

29,803. (*Chairman.*) Do you think there ought to be a real distinction between the actual paid English consul-general or consul holding the proper position of consul and the honorary title of the foreigner holding the position of unpaid consul?—Yes.

29,804. (*Mr. Lawson.*) Would you say that the unpaid men ought to be vice-consuls?—Yes I think they ought to be vice-consuls.

The witness withdrew

Mr. Frank Mowatt, C.B., recalled; further examined.

29,805. (*Chairman.*) There are a few points upon which the Commission would like to examine you with reference to the working of the Diplomatic Pensions Act; it differs materially, does it not, from the ordinary Civil Service Act?—Yes.

29,806. It differs in that there are first, second, third, and fourth class pensions fixed in that Act?—The amounts of the several classes of pension are not actually fixed, the words are "not exceeding the following amounts."

29,807. Perhaps I had better ask you generally whether in the working of this Act which, of course, is administered by the Treasury on the recommendation of the Secretary of State for Foreign Affairs, the Treasury have any suggestions to make for improving the Act?—Until 1886 the Treasury read that 6th section so that "not exceeding" meant the maximum, and that has not been questioned as regards the first three classes of pensions. As regards the fourth class of pensions the Treasury questioned it a few years ago, and the Secretary of State expressed his willingness on the next vacancy to consider with the Treasury what modification could be made, or in what way we should read the "not exceeding." You will observe that the requirements or the qualifications for a pension are laid down in the 7th section, and that as regards the fourth class they are, that the service shall have been at least 15 years from the date of the first commission, and that the officer should have served continuously in some foreign state or states for the aggregate of 10 years. No requirement is included that he should be either 60 years of age or that he should be incapable from the state of his bodily health from continuing his duties. The Treasury thought that where a medical certificate was not produced, that is to say, where the officer withdrew from the service from considerations private to himself, the maximum should not be awarded to him.

29,808. How has that been ultimately decided. Has it been held that the Act enables the Treasury to do that?—Yes; and the Secretary of State has expressed his willingness to consider with the Treasury what modifications or what reduction from the maximum shall be made in the case of officers qualified for the fourth-class pension who do not retire on a medical certificate or on the ground of age.

29,809. I think there is no medical certificate required for a third-class pension, and that there is no stipulation as to age?—No.

29,810. Is it the case that in the lower branches of the diplomatic service the salaries are low, and that, practically, that is made up to those who do not attain the higher ranks by a pension being given on easier terms than on the higher scale?—Yes, I believe so.

29,811. I do not know whether it would be a fair question to ask you, whether from the Treasury point of view you think that that is a satisfactory state of things?—Answering from the Treasury point of view, not a satisfactory state of things.

29,812. Are there instances of the Treasury refusing a fourth-class pension, or is it practically merely limited to the question of amount?—It has been limited to the question of amount. I should, perhaps, add that the Treasury has not questioned the amount in cases where a medical certificate has been produced, they have only questioned the amount of the pension in cases in which the officer has retired for reasons personal to himself.

29,813. (*Mr. Lawson.*) What sort of medical certificate?—That he is incapable from the state of his bodily or mental health to continue in the performance of the duties of his office.

29,814. From any licensed practitioner?—Yes.

29,815. We have had some evidence that the pension of a first secretary does not seem to be specially provided for, is that the case?—He comes under the fourth class pension; he is a person in the diplomatic service, and he fulfils the conditions required to qualify for a fourth-class pension.

Mr. F. Mowatt, C.B.

13 Mar. 1890.

29,816. Then I do not quite understand why he should not appear in clause 8 of the Pension Act, which runs: "Where a person holding a commission as "second or third secretary in Her Majesty's Diplo- "matic service, and having served in such capacities, "or one of them, for a period of not less than five "years," and so on; why does not the first secretary appear in that section?—I have understood that that was because of the small salaries of the second and third secretaries, and this section is limited to "infirmity of mind or body"; therefore, if retired at all, they are retired at a low salary and after a short service. This section insures to them a higher rate of pension than the ordinary Civil Service scale in consequence.

29,817. A period of five years being the time after which they can get a pension instead of 10 years in the ordinary service, the pension being reckoned by one-thirtieth instead of by one-sixtieth?—Yes.

29,818. That is an advantage given, in your opinion, to the second and third secretaries on retiring, because of the extreme lowness of their salary, at all events that is one reason?—Because of their salaries being lower than they would have been in the Civil Service.

29,819. (*Lord Lingen.*) For the same relative rank?—Yes.

29,820. (*Chairman.*) In the working generally of this Act, looking at it from a Treasury point of view, have you any suggestions to make for improving it or altering it in any way?—I think in pensions of the fourth class a medical certificate should be required. When a man is performing what may be called ordinary administrative duties, I think he should only be allowed to retire either from age or under medical certificate—speaking still from a Treasury point of view.

29,821. Would you confine that to the fourth-class pension?—I think there are possibly other considerations affecting men who are actually *chargés d'affaires* who are themselves responsible for the conduct of diplomatic relations between two countries.

29,822. Other considerations, some in the case of a person being "an envoy extraordinary and minister "plenipotentiary on admission of the second class, or a "minister plenipotentiary, or a minister resident, or a "*chargé d'affaires* and consul-general," and so on; but in the fourth class, I understand you to be of opinion that it might be proper to introduce a limit of age or to insist upon a medical certificate before it could be granted?—Yes.

29,823. What would you say to a proposal to take the fourth-class pension away altogether and to let clause 8 include first, second, and third secretaries, who do not come under the qualifications of sub-section 4 of clause 7, and to let that clause 8 on medical certificate, and so on, meet the case of pensions below the rank of a third-class pension—would not that be very much in the direction of what you have been suggesting?—Yes.

29,824. It probably would be necessary to add the qualification of age also to the first secretary if you brought him under clause 8, would it not?—Yes, the alternative of age could hardly occur in the case of a second or a third-class secretary.

29,825. But it might presumably occur in the case of a first secretary?—Yes.

29,826. (*Lord Lingen.*) What would be the shortest term of service for which a person could get a pension in the fourth class without a medical certificate?—15 years from the date of his having received his first commission, and he receives his first commission, I believe, about two years after he is appointed as an attaché.

29,827. Practically, in how many years would that be?—Practically, in 17 years.

29,828. After 17 years, I suppose, he might be a gentleman barely 40 years of age and that he conceivably might retire on 700*l.* a year although his health was in no degree broken down?—Subject to the exercise of the power of discretion by the Treasury, which Secretary of State has now agreed to recognise.

29,829. The words "not exceeding" would control all those pensions, according to the merits of the case?—Yes. I had better read, perhaps, the sentence of the Secretary of State in writing on the subject. The Treasury, in a letter of the 21st of December 1885, in assenting to award the maximum in a case then before them for the fourth class wrote that "this concession "must be upon the understanding that Lord Salisbury "agrees with them that the full pension is excessive "unless earned by a sufficient length of service, and "that a more reasonable rate is to be adopted in "concert between the two departments in all future "cases. With that view, my Lords must ask that "before the final grant of a pension is made to this "gentleman they may secure Lord Salisbury's assent "to the proposed arrangement in pursuance of it."

29,830. What would the proposed arrangement exactly be?—That a scale should be settled between the two departments. The Foreign Office letter in reply, dated the 31st of December 1885, says, "I am to express his "Lordship's satisfaction at their Lordship's decision. "Lord Salisbury finds no difficulty in assenting to the "condition on which the grant is made, and on this "point I am to remind you that in a previous letter, it "was stated that the question of amount was one "which the Secretary of State was quite willing to "re-consider with the assistance of the Treasury."

29,831. Does that extend to pensions of all these classes?—No, it was with reference to pensions of the fourth class.

29,832. Referring now to the 8th section, which allows retirement on medical certificate at the end of five years and the pension being reckoned by one-thirtieths, have there been many cases under that section brought before the notice of the Treasury?—No, very few.

29,833. Do you happen to know whether in any particular case it appeared that a man had suffered from sudden transference from hot countries to cold ones, or from a position in an unhealthy climate?—Not in any case under section 8.

29,834. Would the Treasury under section 8 consider that the infirmity of mind or body primarily ought to have been incurred under conditions peculiar to this service, or would any illness do?—Any illness which disqualified.

29,835. No question would be raised, for instance, such as — an ordinary civil servant might have suffered from this illness?—No.

29,836. (*Mr. Lawson.*) Following up Lord Lingen's question, I would like to ask you whether this "capacity" has been read to be absolute, or only in reference to a particular place or climate?—To a particular class of climates. An argument has arisen on that. The Secretary of State has had to say to the Treasury, a particular officer whom I propose to appoint, say, to Japan, is not capable of going to that climate, and a medical certificate has been produced that he could not perform his duties in that climate; on its being suggested that he might be employed nearer home, the answer has been that there is no suitable place in which he can be employed nearer home, there is no place open for him, and he is consequently disqualified for the farther performance of his duties.

29,837. (*Lord Lingen.*) Has it been suggested that he might be put on half pay or held in reserve?—That is met by a section which enables a man to be recalled to the service.

29,838. (*Mr. Lawson.*) Do you mean section 11?—Yes.

29,839. (*Lord Lingen.*) Has that ever been resorted to within your experience in the diplomatic service?—Yes.

29,840. A pensioned officer has been recalled?—Yes.

29,841. (*Mr. Lawson.*) Has it been done as a matter of practice?—I could hardly say; the Treasury would not know.

29,842. You said you had known a case, but I want to know whether that case was exceptional?—I could not say that.

29,843. Has it been suggested that this eighth clause has ever been abused in the way that we have heard has been the case under somewhat similar circumstances in other parts of the Civil Service?—Not within my knowledge.

29,844. I asked that because I thought perhaps that the disqualification from infirmity of mind or body might have been used for getting rid of incompetent servants?—Of course that is possible, but, practically, it is not possible for the Treasury to go behind a qualified medical certificate.

29,845. Have you any reason to believe that that has been done?—I could not say that.

29,846. In the case of these general pension regulations have instances come under your notice where men have been shelved without actual disqualification on the ground of health or age?—We have had to award the fourth-class pensions to gentlemen who did not ask to be retired on the ground of health or age.

29,847. How did they fall under the Act?—The sixth section does not require a medical certificate; a medical certificate is only required in the eighth section, and only for a particular class of person, namely, the second and third secretaries.

29,848. I understood, I am bound to say, that where health was not questioned, then it was a matter of age?—No, except under that 8th section.

29,849. Then, as a matter of fact, at any time after the 15 years' service a man can be retired on a pension according to the different classes?—Yes.

29,850. Are men constantly retired, or are they often retired without ill-health, and before they have become disqualified from age?—Not frequently, but there have been several cases in my own experience.

29,851. Do you think that that is an advantageous thing to the State?—Speaking from a Treasury point of view, as I said, not advantageous.

29,852. You have said that you have known the 11th clause, which deals with the forfeiture of pension on refusal to serve again, put into force?—I have known a man recalled to the service under that section.

29,853. That is to say, he had to come back under a sort of compulsion?—I could not say whether compulsion was used, but he did, as a matter of fact, return.

29,854. I can conceive an instance in which, for special service, a man was wanted, but that the terms may have been so advantageous that he would have come back without any reference to the section?—The Treasury, in making the award in the case of which I am thinking, expressed a hope that the retiring officer would be recalled to the service on the first suitable vacancy. The Secretary of State wrote back to say that that was his full intention, and immediately afterwards—I think within a year afterwards—he was recalled.

29,855. I suppose there have been cases where men have been retired on certificates of ill-health, which very often must be of rather a flimsy character, or which anyhow did not apply for more than a limited time; and it is quite conceivable that such men may have been found working in the city, or elsewhere?—Are you speaking now of the diplomatic service?

29,856. Strictly of the diplomatic service?—I have no official knowledge of such a case.

29,857. If such a case occurred whose duty would it be to recall the man, or to give him an opportunity of further service?—I presume the Secretary of State's.

29,858. But he is under no obligation?—Not that I am aware of.

29,859. Do you think there ought to be in the case of these diplomatic officers on pension any periodic certificates?—I have not much faith, personally, in medical certificates.

29,860. I should like to understand Clause 13, "Determination of Class of Missions." I take that to mean that a mission may be withdrawn or abolished without the assent of Parliament under these conditions?—No. I read it as saying that the Secretary of State may determine to which class of mission some particular embassy may belong, that he might raise it to the rank of a first class, or reduce it to the rank of a third class mission.

29,861. How does that affect the pension rights of the man who is filling the post for the time being? Take the case of Spain; the embassy in Madrid was restored only the other day, and took the place of legation there; how would that affect Sir Clare Ford, who is the ambassador?—If it were raised to the first class he would fall under the third sub-section of section 7.

29,862. It is raised from the third to the second, I fancy; that is to say, it is now an embassy, it is no longer a mission at all in the technical sense?—Then he is raised to the second sub-section.

29,863. He would get the benefit of that?—He would get the benefit of that if he served after it was raised.

29,864. Of course there is no difference, excepting in point of etiquette and title. I mean to say that the duties are probably the same now as they were years ago; as in a case like that there is not likely to be any special change. My point is, that the person filling the post gets an advantage without any change in the nature of his work?—It would depend upon the grounds on which the mission were changed; it might possibly be that the work became more important, and required a man of higher qualifications.

29,865. We have had evidence with regard to the pension regulations with respect to the consuls; their pensions are upon the ordinary Civil Service scale, I believe?—Yes.

29,866-7. To-day it has been suggested to us that that is unfair on the service in one respect, namely, that there is no grading in the consular service, and that salary is no index to service, because it depends upon the cost of living, and the conditions of climate in different countries to a great extent; have you anything to say upon that?—The conditions of climate have been met by an arrangement that in certain climates scheduled as unhealthy, two years' service shall count for three.

29,868. Yes, but even without their being actually unhealthy a man may look upon it as more advantageous to serve in France than in the southern portions of the United States, which may not possibly be looked upon so favourably?—I do not think it would be possible to modify the superannuation scale as to meet that.

29,869. Of course it is obvious in most of the principal places in the United States that the cost of living is greater than it is in France or Germany?—Then, I presume, the salary is fixed in view of that.

29,870. It is, but then the salary at both posts may be just as good, but the post in Europe may be looked upon as rather better than the post in America?—That may be so, no doubt; it would be extremely difficult to take that into consideration in calculating a pension, I think.

29,871. It seems to me that there is some unfairness in applying our own Civil Service system to the consular service, for the reason that there is no regular grading in the consular service?—But in many offices of the permanent Civil Service there is no grading either. You appoint a man to a salary which does not vary; a man is appointed Commissioner of Customs, for instance; there is no grading in that, and he may be appointed from outside the service.

29,872. To take that case again with regard to the difference in the cost of living, do you think that the pension ought to have any relation to that?—Yes, in the abstract, and if salary proper could be distinguished from cost of living.

29,873. A consul who was here to-day said that he believed you ought to give a certain fixed increment—a pension right for each year's service; he thought that would be cheaper—anyhow not more expensive—in the end than the present system?—In respect of the amount of salary?

29,874. Without counting the amount of the salary—that it ought to depend entirely upon the length of service in the consular branch?—But you must accept the salary as the unit on which you are to base your calculation.

29,875. What is the total amount of the Vote for the diplomatic and consular pensions separately?—Once every three years it is given in detail, and I think it will appear this year. On page 470 of the Estimates you will see that it is about 24,000*l.* for the diplomatic service.

29,876. That includes compensation and compassionate allowances?—Yes, if you carry it on to the total you will find that it comes out 223,894*l.* The compensation and compassionate allowances are very small.

29,877. (*Chairman.*) Would you refer to page 261 of the Foreign Office list; 24 persons are given there as receiving the pensions, and the pensions themselves amount to about 26,000*l.*, whereas in the Estimates the number of persons in receipt of pensions is given at 34, and the total is 23,000*l.*?—Yes; but there are some survivals from the time when the diplomatic pensions were charged upon the Consolidated Fund. If you

Mr. F. Mowatt, C.B.

13 Mar. 1890.

look at the bottom of page 425 you will see "Consolidated Fund, 3,300*l.*"

29,878. That does not quite account for the difference in the number of person receiving pensions?—I think you will find that there are some small compassionate allowances which are not mentioned in the Foreign Office list.

29,878*a*. Are the diplomatic pension rates more or less favourable to the retiring officer than the rates for the Civil Service generally?—The present charge for the salaries of the diplomatic service is about 175,000*l.*, and for the pensions about 23,000*l.*; equivalent to rather more than 13 per cent. of the salaries; which is less by three per cent. than the normal rate in the permanent Civil Service. But in order to make a fair comparison between the two services it should be remembered that in the upper grades of the diplomatic service the salaries are abnormally high, as they represent, not only remuneration, but a great deal of out-of-pocket expenditure on entertainment and "frais de représentation." There are 10 salaries on the list of 5,000*l.* per annum and upwards, and 16 ranging between 2,000 and 5,000*l.* To make a fair comparison with the Civil Service it would be necessary to reduce the above-mentioned sum of 175,000*l.* by about 60,000*l.*, and the pension charge would then represent about 20 per cent. of the salary list. On the other hand, the salaries in the lower grades of the service are exceptionally low. There are usually eight or nine attachés who serve for two years without any salary; there are 21 third secretaries with fixed salaries of 150*l.*, and 32 second secretaries with salaries rising from 300*l.* to 450*l.*, and the latter sum may be taken to be the average salary attainable after from 15 to 18 years service. The first class diplomatic pension (1,700*l.*) may be taken to represent the maximum pension obtainable in the highest ranks of the Civil Service after 40 years service. The second class pension represents the next grade in the Civil Service, with salaries of from 1,500*l.* to 1,800*l.* per annum; and the third class pension is about equivalent to what can be obtained by a civil servant who does not reach the highest offices. The average diplomatic pension may therefore be taken to be practically equivalent to that obtainable by a civil servant of corresponding rank; the percentage of pension as compared with salary being rather higher in the diplomatic service on account of the larger proportion of very highly paid places.

29,879. It is perfectly clear, is it not, under the Act that there is no age at which a diplomatic servant can claim to retire upon a pension without a medical certificate?—He cannot be recalled if he is over 60 years of age; that is the only limit I know. You will find in section 11 that his pension is forfeited if he refuses when required to proceed to any mission unless he has attained the age of 60, or is incapacitated; that, perhaps, indirectly recognises 60 years.

29,880. Do not you think that it might be desirable to give an opportunity or a right to retire at 60, or whatever age might be fixed, in the same way as it is in the Civil Service?—I should say so.

29,881. Can you not conceive that there may be reasons in which it may be for the advantage of the service that a man might claim his right to retire at that age?—I think so, certainly.

29,882. Does it occur to you that there are any special reasons affecting the diplomatic service which in that respect could render it different from the ordinary Civil Service?—No.

29,883. Is there anything else that occurs to you from the Treasury point of view which you might suggest to the Commission?—No, I think not.

The witness withdrew.

Mr. Frederick S. A. Bourne called and examined.

Mr. F. S. A. Bourne.

29,884. (*Chairman.*) I think you are acting consul on the Chinese coast?—Yes, at Tamsui, in the north of Formosa.

29,885. The Commission have taken advantage of your being at home to ask you to come and give evidence upon the consulates in that part of the world. I think you yourself joined the service as a student interpreter?—Yes.

29,886. Having been formerly in the War Office, I believe?—Yes.

29,887. Your service is constituted entirely differently from any other branch of the consular service?—Yes, it differs essentially in this way, that British subjects living in China are subject to British law, and consuls in China have to administer British law, whereas consuls on the continent of Europe have nothing to do with the law, the law under which British subjects are living in Europe being the law of the country in which they live.

29,888. Do the student interpreters who enter the service have a special examination in law, or does a special examination follow?—Law is one of the subjects in which they are examined. When they come home on leave for the first time they are granted an extra year's leave in consideration of their entering an inn of court and reading law with a view to being called to the bar, and on their second term of leave they can make up their 12 terms and be called. During the first term of leave they have to be examined by the Civil Service Commissioners in mercantile law, and international law, and criminal law.

29,889. How long has this system been going on?—I think the system of open competition began in 1872, but the same system has been followed since about 1860, except that from 1860 to 1872 the competition was limited to those nominated by the universities. Since 1872 it has been open.

29,890. With reference to the special knowledge of the languages of China, Japan, and Siam, are those languages to be acquired subsequent to the preliminary examination, or are you examined in the first instance in those languages?—No, we are examined in England in ordinary subjects, classics and mathematics, and so on. We are then sent to Pekin, where we read Chinese for two years in the legation.

29,891. I am aware of that, but is there no examination at all in Chinese in the first instance?—There is no examination in Chinese in the first instance; that was found to be a great mistake; it cannot be taught in this country.

29,892. Then upon passing the preliminary examination, which, I suppose, is a competitive examination——?—Yes.

29,893. You go to Pekin as a student interpreter for two years?—Yes.

29,894. That system has been copied, has it not, in the Levant?—It has.

29,895. Then after passing that examination you become what is called an assistant?—Soon after passing that examination, when there is a vacancy in the service. There are a certain number of assistants, and one has to wait until there is a vacancy for promotion to the post of assistant.

29,896. Are your duties at all political, or are they entirely commercial?—They are both political and commercial. At a Chinese port the only man who can communicate with the officials is the consul. The merchants, if they are not able to recover their debts, can sue only through the consul; they cannot apply themselves to the Chinese authorities. But the consul's chief political duty is holding the Chinese authorities up to the treaties.

29,897. Then the first rank after student interpreter is assistant, and then from that rank, when there is a vacancy, they become vice-consuls, and then consuls?—Yes.

29,898. What is the relation of your general body which has this familiarity with the language, and so forth, with our diplomatic service in China?—The consular service is subordinate to the diplomatic service. The diplomatic service is not represented in China, except, of course, in Pekin, where there is a minister and secretary of legation, and, perhaps, a second secretary. There are three men in China who belong to the diplomatic service.

29,899. Are there any members of your body attached to the legation at Pekin?—Yes, there is the Chinese secretary and an assistant Chinese secretary, who are interpreters to the minister, and who translate and

advise him as to Chinese relations and as to what is going on amongst the Chinese, the minister usually not being acquainted with the language of the country.

29,900. The assistant Chinese secretary, I see from the Estimates, has 700*l.*?—Yes, he has.

29,901. And the Chinese secretary has 800*l.* a year?—Yes.

29,902. Both being members of your body?—Yes.

29,903. The Chinese secretary appears on the ordinary diplomatic service vote, but the assistant Chinese secretary appears in your distinct consular service vote, although both, as you say, are members of your body?—Yes.

29,904. We have been told generally, and I believe it is the case, that this service is a very satisfactory service: have you any suggestions to make with reference to it for its improvement?—The only suggestion I have to make is that at present there is an absolute block in promotion; it is almost hopeless for those who are the juniors in the service.

29,905. There are not many prizes in it, I should suppose?—There are a certain number of good appointments in it, but the promotion is so very slow.

29,906. I am afraid that is not an uncommon calamity, is it?—I am afraid not.

29,907. Are there any suggestions that occur to you whereby that position of affairs might be improved?—I think that after a certain number of years, say five years, with the recommendation of the minister, a student interpreter might be made a second assistant; and that after, say 10 years, with the recommendation of the minister, a second assistant might be made a first assistant, and that the appointments that are filled at present by acting men—where there is a substantive post, and where there is a necessity for a representative as there is in Corea—that those should be made substantive posts. At present, these posts are acting posts, and that is really a great grievance to men who went out to China in the expectation that where there was work to do there would be a post created.

29,908. You mean that there are some posts, such as Corea, where there are acting consuls or acting vice-consuls?—Yes, there are two posts in Corea, and there is a post in the south of China, at Macao, and I think there are two or three others in which a substantive appointment has never been made. Nobody is really a consul at the place, nobody has a commission from the Queen as consul or as vice-consul, but an assistant is put into the place to act, and given an allowance. That is a very unsatisfactory state of things, both to the men, and, I believe, to the work, because it is nobody's particular business to do this work, and men are transferred there just as it happens to be convenient. If there is a necessity, as there has been in Corea during the last five years, for a consul-general and for two or three assistants, in fairness to the men employed in China those should be made substantive appointments, and men should be appointed to them. But to these appointments nobody has ever been appointed, they depute an assistant to go there and act as consul-general, or a consul to go there and act as consul-general. It is easy to understand that where there is an officer who has a substantive appointment he may be ill, or he may be at home on leave, and there must be someone to replace him; but where it has been necessary for years (in the case of Corea now I think nearly 10 years), to have two or three men permanently in the country representing Great Britain with a consul-general (and as the minister resides in Pekin, the consul-general in Corea has to do the whole work of the country), it does not seem satisfactory either from the point of view of the man employed there, or from the point of view of the Government, that that man should always be a man whose post is somewhere else, and who is simply put there *pro tem.* to fulfil those functions.

29,909. Are there many places of that kind on what I may call the Chinese coast?—There are two appointments in Corea, and there is one in Macao; there is one in Shanghai, the shipping vice-consul in Shanghai, and there is one in Canton.

29,910. These are, you say, practically permanent posts which ought to be filled by vice-consuls?—By consul-general, consul, or vice-consul, as the case may be.

29,911. Not by an assistant receiving a temporary allowance?—Not by an assistant receiving a temporary allowance, but by an officer who holds a commission as consul or vice-consul, as the case may be, at that port.

29,912. An assistant does not hold a commission?—He holds no commission.

29,913. Commissions begin at the rank of vice-consul?—Yes.

29,914. And the pay of vice-consul begins at 600*l.*?—That is so.

29,915. And is the highest assistant 400*l.*?—Yes.

29,916. (*Lord Lingen.*) I suppose the assistants count for pension, do not they?—Yes, they do.

29,917. (*Chairman.*) Is there a separate Act for pensions under which you come?—I think we come under the Unhealthy Pensions Act.

29,918. You mean you come under the ordinary Act with an addition of two years of service counting for three?—Yes; if I might make a suggestion I would say that in my opinion, and in the opinion, I think, of most men employed in China, the work that is done by the consular service is not fairly recognised as work done by consuls in other places, and as work done by the diplomatic service is recognised. We live very far from England, and there are very few people in England who take any interest in what is going on in those countries. We have important work to do, and generally no recognition whatever of it is made, and it is very disheartening in the case of many good men, some of whom I could mention. The result has been that they have been driven from the service; they have no public to appeal to; it would not be at all consistent with their duties to appeal to a public; but their interests are, I think, scarcely fairly regarded. I may instance that in the case of distinction of any sort, no distinction of any sort has been granted to a member of the Chinese consular service since Sir Thomas Wade was made C.B., I think, in 1862. In the meantime the work has been done by men who have done their best, and whose work, I think, will stand comparison with other work for which distinctions are given. Although I am only a junior myself, and perhaps, should not say anything about it, I think that there are men who have left China, who are 20 years senior to me, whose work should have been recognised more than it has been.

29,919. I am not sure that you are perfectly right as to the number of public servants of that class who have been rewarded; was not Sir Robert Hart rewarded?—Sir Robert Hart did not belong to the service; he has been in the service of the Chinese Government for the last 20 or 30 years.

29,920. Is it part of your duty to write reports?—It is.

29,921. I think you have said that yours is the only service in which the English subjects resident in your district are under English law, which it is your duty to administer?—That is so in Siam and in Japan, and I think in the Levant to some extent.

29,922. Is there any other suggestion which occurs to you, if so, we should be very glad to have it?—No, I think there is not.

29,923. (*Lord Lingen.*) I understood you to say that the want of the service was rather the want of recognition than that they were insufficiently paid?—The want of recognition I meant to apply only to those who had served 20 or 30 years, who are old men in the service there, but in the case of the juniors it is quite different. What I said was that there is quite a block in the promotion, and that something should be done to relieve the present under-scale of pay in the lower ranks of the service, amongst the assistants and the students. There are student interpreters who, I believe, have been in the service for over 10 years, who have never been promoted at all.

29,924. Who have still remained as assistants?—No, as student interpreters—the lower rank. I am a second-class assistant, but I have received no promotion for 10 years.

29,925. Is the student interpreter the next rank in the consular grade in China?—Yes; recruits go out as student interpreters to learn the language in Pekin.

29,926. These student interpreters when they get out to China are all employed under seniors, are not they. They are not sent at large themselves?—No; they are employed, after leaving Pekin, as acting assistants to consuls in the ports.

Mr. F. S. A. Bourne.

13 Mar. 1890.

29,927. When a man gets into the second class of assistants, which is 350*l.* a year, with 400*l.* in the next class, that, as the Civil Service goes, is not very insufficient pay, and then you have got above that 22 (I make it) consuls and vice-consuls, going from 600*l.* up to 1,500*l.* a year; do not those places make a pretty good career for men to look to?—Yes, they do. The trouble is not, in my opinion, that the 22 or the 24 substantive posts of consul are not sufficiently paid. I do not complain that those posts are not sufficiently paid, but that the promotion in the lower grades of the service amongst the assistants and the student interpreters is so slow, that a man, as things go now, may become old and useless almost before he is likely to get a permanent post. It has only been so for a few years—for the last 10 years. Before that there was nothing whatever to complain of. What I say, I do not say so much for myself as for men who are junior to me. I have nothing to complain of myself, but amongst men who joined the service four or six years after I did, there has been an absolute block in that direction for 10 or 12 years.

29,928. Is not that due to a circumstance that happens to all new offices, namely, that the first men who get in are pretty much of an age, and, therefore, there is a great block of promotion, but after a time will not these consulships and vice-consulships become vacant more frequently?—I should think they will.

29,929. So that we have only to deal, so far as this charge is well founded, with a temporary state of things. If we take 16 interpreters and 12 second-class assistants, that makes 28, and 9 first-class assistants, 37; then we have got 37 in those lower ranks, and we have got 22 appointments going from 600*l.* up to 1,500*l.* If we measure that service by any ordinary rules, that is a pretty good career open to men if the men in the better paid places were not so near to the junior ones in age?—Yes, but if you could propose some measure of relief to the student interpreters for the time being, such as that a shorter term of years, say five years good service, approved by the minister, should make them competent to be promoted after those five years without there being a vacancy to the next rank, I think the grievance amongst the juniors in the service would be relieved.

29,930. Your suggestion would be that after a certain amount of good service as a student interpreter a man should be promotable on the recommendation of his superiors to the second class of assistants?—Exactly, and that from the second class of assistants in the same way after a further period of good service, approved by his superiors, he should be promoted to first assistant, and after that he should take his chance.

29,931. And that might probably be regarded as merely a temporary arrangement until the ages had better adapted themselves to the service?—I think so.

29,932. (*Mr. Cleghorn.*) There is a note in the Estimates, page 451, to this effect:—"A student interpreter, after "passing successfully through his probationary period "at Pekin receives a salary not exceeding 300*l.* a "year on being appointed temporarily as assistant "in one of Her Majesty's consulates in China. This "salary becomes permanent after five years' service"?—That is the rule at present.

29,933. So that a student interpreter has the chance, almost a certainty, I suppose, of rising to 300*l.* a year permanently?—Yes.

29,933*a*. (*Lord Lingen.*) How many have you got at Pekin?—I think in Pekin at the present time there are four or five student interpreters, but in the south of China there must be 10 or 12 who are acting as second assistants in consulates.

29,934 (*Mr. Cleghorn.*) Are the vacancies in the consulates and vice-consulates always filled up by assistants?—Yes, they are.

29,935. Then the higher paid consulates—say the consulate at Amoy—which is 1,000*l.* a year, would be filled up by a consul at a lower paid place?—Exactly.

29,936. There would be nobody brought in from the outside?—No, nobody has been brought in from the outside for years, except to judicial appointments in the Supreme Court.

29,937. There is a certainty then when a vacancy occurs in a higher paid post, that a lower paid man will succeed?—Yes.

29,938. Then would not the block that you talk of, which exists at present, be cured by not appointing so many of those student interpreters?—I do not think it would be cured, because, as Lord Lingen said, the men are of one age. Those eight or ten men entered together, and for those particular men who are junior at present, it would not be cured, because the men who are senior to them, who are all of an age will, in the ordinary course of things, we will say, be 30 years in China on service, and until that 30 years is passed, the other men who may be only two or three years junior to them will not have a chance of promotion.

29,939. That would be met by sending out fewer men for the time being, at all events until those men have a chance to run up?—As regards those 10 men, individually it would not do good in the least, because the other men who would be appointed would be below them. The block for them would be exactly the same. The only way to relieve them is to alter the rule, and to give them for the time being, after a certain number of years' service, the next rank. That would relieve them, and it would relieve them at a very little expense. I think it should be remembered that service out there cannot be compared with service at home, and the climate is bad, and the duties are quite different; the responsibilities are very much larger. You are stationed at a place where you can get no advice whatever; you have no lawyers to go to to help you; you have no minister to go to to help you; the minister is in Pekin, and you may telegraph to him, but he cannot realise from a telegram the state of circumstances in your place. You have an amount of responsibility thrown upon you which is very rare in these days in any employment.

29,940. (*Mr. Lawson.*) Because of the isolation?—Because of the isolation of the post.

29,941. (*Mr. Cleghorn.*) Yes, but if you are sending out fewer there would be fewer men undergoing disappointment?—It seems to me that men in the junior ranks, being appointed in less numbers, would make no difference for the time being to the men senior to them.

29,942. There would be fewer dissatisfied?—You must have a certain number of men to do the work.

29,943. (*Mr. Lawson.*) I understood that the service is kept at a certain standard of strength?—Yes.

29,944. Therefore the examinations are not regular—they are only held when there are vacancies?—Exactly.

29,945. Therefore it makes no difference if you keep a certain number always in China—it does not depend upon the examination, it depends upon the standard of the service?—Exactly.

29,946. Beyond the men who are learning their duties and acquiring the language at Pekin, are there any who are not in regular employment?—There are none who are not in regular employment. As soon as a man has passed two years there—in many cases, if they want a man, if he has passed only a year and a half in Pekin—he is sent down to do the work at the ports, if his work is wanted.

29,947. What is the total number of vice-consuls, assistants, and student interpreters in China?—I think the total number is about 55 or 60. This block is quite a temporary affair; my proposals as to substantive appointments and rank for years would cause very little expense to the Government; I do not suppose more than 1,000*l.* to 1,500*l.* a year, and they would be a great relief to the juniors out there, who are at present almost hopeless. If this state of things goes on the best men will leave the service. There is no difficulty in a man who knows Chinese getting employment out there.

29,948. May I ask at what age you entered the service?—I entered the service in China at 21.

29,949. By a preliminary examination here?—Yes.

29,950. As a matter of fact, what is the average time that is taken in the acquisition of Chinese?—I think a man can learn enough Chinese to be useful in two years.

29,951. We have heard that Chinese is a very wide term, and that there are an immense number of dialects?—There is one dialect that is spoken by all officials.

29,952. The Mandarin?—Yes, all over the empire. A man can learn enough of that to go in and see an official, and do his business with him, in two years, if he works hard.

29,953. Is there any interchange between China, Japan, and Siam?—There is supposed to be, I believe, but it is very rarely that there is an interchange.

29,954. Of course, the languages are utterly distinct? Exactly. When a man has once learnt the language I do not think they change the man for ordinary executive duties, but they send a man for judicial business from one country to the other.

29,955. Japanese is very easy, is not it, as compared with Chinese?—Yes, I believe it is.

29,956. I suppose the posts, from what you hear of them, in Japan are rather pleasanter than those you have in China?—Very much so; people are altogether different. The Chinese are extremely astute. I do not suppose there are any people more troublesome to deal with, and, besides that, they have a strong antipathy to foreigners. It is almost impossible to be on really good terms with them; at all events, it is very difficult.

29,957. I have heard from bankers and others in San Francisco, that they are very precise in their dealings?—They are.

29,958. Very straight, as one might say?—Bankers and the larger merchants are very straight. Mercantile morality is high amongst them. You can trust the Chinese banker implicitly.

29,959. Therefore you have not much trouble in respect to this sort of dealing?—No; not with that class.

29,960. Your functions are somewhat political there?—Yes, they are political, between the British community and the Chinese, and with regard to the British community alone they are judicial, because the British subjects there are living under British law.

29,961. When a political question arises, do you communicate at once as fast as you can with the legation at Pekin?—Yes.

29,962. Do you wait for instructions, or do you act on your own initiative?—You almost always have to act on your own initiative.

29,963. Of course there is no telegraph?—In some places there is now; in most of the ports, I think, there is a telegraph.

29,964. I heard you say you have an amount of responsibility that few diplomatic officers have?—Yes; you have that because the circumstances are so difficult to explain. They depend on the relations with the Chinese—the state of feeling amongst the Chinese. You cannot put the minister through a telegram in a position so that he can judge of the state of facts existing in a place. You may telegraph for instructions, but in the ordinary way the minister will not know what instructions to give. I am thinking particularly of riots and troubles of that sort, which frequently occur.

29,965. Attacks on missionaries?—Yes, exactly—trouble with missionaries, amongst others.

29,966. At the present time, are there any members of your service at the legation at Pekin?—Yes, there are two, and besides those two there are student interpreters; there are altogether six or seven.

29,967. Is there any feeling in your service that it would be an advantage if there was some possibility of promotion to the diplomatic service in the East—in China in particular?—Well, I think the opinion in our service generally is that the line should not be an absolutely hard-and-fast line; at the same time, we think that the present system of selecting and sending out diplomatic officers is a good one. I do not think there is any dissatisfaction at all in that respect; but still we think that if occasionally, as in the cases in the past of Sir Thomas Wade and Sir Rutherford Alcock, there is a good man in China, he should be given a chance; and I think, as things go at present, it would be so probably.

29,968. Those exceptional promotions do not give rise to jealousy, you think?—I do not think so. I think that if there is a good enough man in our service his merits would probably be recognised by the Foreign Office, and there would be no jealousy amongst other men in the service.

29,969. You communacate directly, I suppose, with the Foreign Office?—Yes.

29,970. With the American department, which takes in north, south, and central America, and China, Japan, and Siam?—Yes.

29,971. Is there any feeling in your service that it would be advantageous if you were put in direct communication with the consular department, as the other branches of your service are?—I do not think there is.

29,972. You have no feeling on that point?—No, I do not think so.

29,973–4. You have, I suppose, of late years been particularly urged to do what you can for English trade in China?—Yes, I may say that while I was at my last post I negotiated some concessions on behalf of the British merchants interested in the place, and reported the matter to the Foreign Office, and it was at once approved, although, of course, 10 years ago it would have been out of the ordinary routine of consular work.

29,975. You are allowed to break through red tape?—Yes.

29,976. Of course one has heard complaints that in China German trade in particular has gained a good deal through the intervention of consuls—do you believe that that complaint is justified?—I do not think there is any cause for complaint in China on the part of our merchants in that respect. I think that the Germans are very serious rivals, but I think that the German consuls may go too far, and that they may bring disrepute on their representatives.

29,977. Within the limits which were laid down for the aid to trade by our diplomatic and consular offices, do you think we do all we can?—I think we are encouraged to do so. I think that some old men in the service do not do all that they might; it is almost impossible they should, because they were brought up under another system, but as far as our instructions go we do all we can.

29,978. Are there many of the old men left in the service?—There are not very many.

29,979. Do you have any sort of commercial instruction at the centre, where the student interpreters work?—We get no commercial instruction beyond having to assist in the work of the legation, such as having to see despatches and copy despatches, and so on,—there is no particular commercial instruction given. The two years that we spend at Pekin are spent in learning Chinese, and that is as much as a man can do.

29,980. Where do you get any commercial knowledge?—A man after being two years in China—say when he is 24—is sent down to the south of China, where he has to deal with merchants every day for the next 10 years. He has junior work to do, and he sees merchants constantly, and he picks up his commercial knowledge in simply dealing with the ordinary work of a consulate as an assistant.

29,981. I heard your general complaint about the absence of distinction or recognition perhaps in the consular service; do you think that applies more to your own branch than other branches?—I think it applies much more to China and Japan than to any other branch of the consular service, because we are so far away.

29,982. He is in the hands of the minister at Pekin to some extent?—He is in the hands of the minister at Pekin, and of course of the Foreign Office, but the minister in Pekin is changed frequently. He is a man who, as things go at present, has had no experience probably of a man's former work.

29,983. (*Chairman.*) Is there anything that you wish to add, because we should be very glad to hear it?—No, I think not.

The witness withdrew.

Adjourned.

APPENDIX.

CIRCULAR LETTER addressed to HEADS of DEPARTMENTS.

Royal Commission on Civil Establishments,
2, Victoria Street, S.W.,
November 1886.

SIR,

I AM desired by the Royal Commissioners on Civil Establishments to request you to have the goodness to furnish them with the following particulars as to the staff, &c. of the Office.

1. A tabular statement showing number and salaries of appointments, permanent or temporary, grades, classes, &c., from highest to lowest, including messengers, servants, &c.

2. The mode of appointment to each grade, &c., in the first instance, and of promotion afterwards.

3. The subjects of examination for each grade, &c.; and the class and amount of work done by each, so far as this can be given.

4. The limits of age for appointments in the first instance.

5. How far does promotion take place from lower to higher grades?

6. The hours of attendance. Is an attendance book kept, or how is a record of attendance provided for?

7. The number of day's vacation in a year.

8. The rules as to sick leave.

9. To what extent are copying machines made use of? What copying is done by hand?

10. What number of copyists are employed? What was the average number employed daily in the year 1885? Are they paid by time or piece, and at what rates? Are they all civil service copyists? What work do they perform? Do they discharge duties similar to those discharged by Lower Division clerks?

11. What is the rule as to printing?

12. Is shorthand made use of? If not, would its introduction be desirable?

13. Are any appointments reserved for persons not serving in the office?

14. In what respect does the work done by the Lower Division clerks differ from that done by clerks in superior grades?

15. What was the cost of stationery in 1885?

16. The Commissioners would also be glad to learn whether you have any suggestion to make with a view to greater economy and efficiency in your department. If any recent re-organisation of the office has taken place, they would wish to be furnished with any available reports upon the subject.

17. They would further request you to state how far the "Playfair scheme" has been introduced into your department, and with what results, so far as can at present be judged.

18. The Commissioners would also be glad to receive the names of any of the administrative officers of your department whose evidence would, in your opinion, be of value to them on the above-mentioned points, and they suggest further that if the members of any particular class or classes desire to be heard specially by the Commissioners upon any matter within the terms of the Commission, they should be at liberty to select some member or members of their body to represent their independent opinions, as concisely as possible, and at first, in writing.

I am, Sir,
Your obedient Servant,
(Signed) HORACE WALPOLE.

(1.)

FOREIGN OFFICE.

A.—SALARIES, WAGES, AND ALLOWANCES.

1889-90.	——	Salary of Office. Minimum.	Annual Increment.	Maximum.
		£	£	£
1	Secretary of State	—	—	5,000
1	Under Secretary of State	—	—	2,000
1	Ditto ditto (Parliamentary)	—	—	1,500
1	Assistant ditto	—	—	1,500
1	Ditto ditto	—	—	1,200
1	Chief Clerk (*a.*)	1,000	50	1,250
5	Senior Clerks (*b.*)	900	50	1,000
7	Assistant Clerks	700	25	800
20	First Class Junior Clerks	200	20	600
4	Second Class ditto	100	20	200
1	Librarian and Keeper of the Papers (*c.*)	700	25	1,000
1	Assistant in Librarian's Department	550	20	650
2	1st Class Clerks in Librarian's Department	400	15	500
4	2nd Class ditto (*d.*)	250	15	360
4	3rd Class ditto	100	10	240
1	Superintendent of the Treaty Department	700	25	1,000
1	Assistant in the Treaty Department	500	20	650
1	Clerk	100	10	240
3	Clerks in Chief Clerk's Department, 1 at 400*l.* by 20*l.* to 600*l.*; 2 at 400*l.* by 20*l.* to 500*l.*	—	—	—
1	Oriental Interpreter	—	—	400
17	Clerks, Lower Division	80	15 triennially.	200
—	Ditto ditto Duty Pay	—	—	330

(*a.*) Also receives 794*l.* 2*s.* for compensation on abolition of Foreign Office Agencies, provided in Class VI.

(*b.*) Including a personal allowance of 100*l.* a year to one Senior Clerk as head of the Commercial Department.

(*c.*) Also receives 349*l.* 13*s.* 8*d.* for compensation on abolition of Foreign Office Agencies, provided in Class VI.

(*d.*) One Clerk of this Class is employed in the Commercial Department, and receives an allowance of 100*l.* a year for editing Commercial Reports, and one in the Treaty Department.

1889-90.	——	Salary of Office.
		£
1	Type writer	1*l.* 1*s.* a week
1	Clerk in the Passport Office *e*	350
1	Private Secretary to the Prime Minister	400
1	Assistant ditto ditto	250
—	Private Secretary to the Secretary of State *f*	300
—	Précis Writer *f*	300
—	Extra Copying	100
1	Printer	150
1	Reader in the Printing Establishment	40*s.* a week
1	Office-keeper and Housekeeper (Resident)	250
1	Ditto ditto ditto	150
6	Ditto three at 125*l.* and three at 100*l.* a year	675
—	Allowance to one of the Office Keepers for charge of Refreshment supply	25
—	Ditto ditto for night duty	20
1	Doorkeeper (Resident)	100
1	Ditto	90
1	Ditto *g*	20*s.* to 30*s.* a week, by 5*l.* 4*s.* a year
1	Coal Porter	25*s.* a week.
1	Assistant to ditto	17*s.* 6*d.* a week.
1	Porter in the Librarian's Department (Resident)	90
1	Ditto ditto	60*l.* to 80*l.* a year, by 2*l.* a year.
10	Housemaids; one at 20*l.*, one at 18*l.*, one at 16*l.*, three at 15*l.*, and four at 14*l.*, a year each	155
—	Housemaids' Board Wages, at 12*s.* a week each	312
	Charwomen; four at 14*s.*, and one at 6*s.* a week each and temporary assistance	187
	Extra Allowances, viz.—	
	Permanent Under Secretary of State, for the Management of the Secret Service Fund of the Foreign Department	300
	A Junior Clerk as Private Secretary to the Permanent Under Secretary of State	150
	A Junior Clerk as Private Secretary to the Parliamentary Under Secretary of State	150
	4 Resident Clerks, at 50*l.* each	200
	Allowances to Junior Clerks for Translations	292

(*e.*) Including a personal allowance of 50*l.* a year.

(*f.*) These allowances are paid to officers of the Department.

(*g.*) 1*s.* in receipt of 1*l.* a week from Metropolitan Police Funds.

Appendix.

FOREIGN OFFICE—*continued.*

1889-90.	——	Salary of Office.

B.—LEGAL ASSISTANT:

		£
1	Legal Assistant - - - - - - -	1,000

C.—MESSENGERS' SALARIES:

		£
10‡	Queen's Foreign Service Messengers, at 400*l.* a year each.	4,000
8	Queen's Home Service Messengers, five at 200*l.*, and three at 150*l.* a year each.	1,450
1	Examining Medical Officer to Queen's Messengers -	30
19		

D.—MESSENGERS' TRAVELLING EXPENSES:

		£
—	Expenses of Journeys, including allowance of 1*l.* a day to Foreign Service Messengers while Abroad - - - - - -	6,500

F.—INCIDENTAL EXPENSES:

		£
—	Newspapers - - - - -	170
—	Housekeepers' and Doorkeepers' Disbursement	180
—	Carriage of Official Books and Papers sent as Parcels - - - - -	150
—	Miscellaneous Payments - - - -	75
—	Total for INCIDENTAL EXPENSES £	575

2. Clerks on the regular line of the office are appointed after limited competition on nomination by the Secretary of State. Clerks of the Lower Division are appointed after open competition. In the case of a few minor appointments the examination is not competitive. Promotion in the Lower Grades is by seniority, and in the higher by selection.

3. The subjects of examination are given in the annexed paper (Appendix A.).

A statement is also annexed giving the distribution of the work of the office (Appendix B.).

4. The limits of age are: *For clerks*, between 18 and 24 years complete.

For Foreign Service Messengers, between 25 and 35 years complete.

For Home Service Messengers, Office Keepers, Door Keepers, and other subordinate situations, under 40 years complete.

5. The introduction of Lower Division Clerks dates from 1881 only, and no instance of promotion from the lower to the higher grade has taken place.

6. The regular hours of attendance are from 12 to 6. Owing, however, to the nature of the work the attendance can be governed by no fixed rules, and during pressure of work some of the clerks are frequently detained till a much later hour than 6 o'clock. The Senior and Assistant Clerks are also often obliged to continue working at home. No record of attendance is kept, but the Senior Clerks are responsible for the attendance of the members of their respective divisions.

7. The length of vacation is two months.

Clerks of the Lower Division one month.

8. There are no rules as to sick leave.

9. Copying machines are only used for producing the necessary number of copies of important telegrams and despatches which require immediate circulation to the Queen and the Cabinet.

Printed forms are made use of, but important despatches and letters, or despatches and letters for which printed forms would be unsuitable, are copied by hand. Since the end of last April a lady type writer has been employed.

10. There are no permanent copyists. Occasionally temporary assistance is obtained from the Civil Service Commissioners.

11. *See* annexed extract from report on printing and stationery, laid before Parliament in 1886 (Appendix C.).

12. The introduction af shorthand generally is not required, but it might be useful if a certain number of the clerks on the establishment were able to write shorthand.

13. Last year the post of Legal Assistant was filled by the appointment of a gentleman who had not previously served in the office.

14. Lower Division Clerks are not employed in divisions in which the business is exclusively political.

In the other divisions work of confidential character is not dealt with by them. Their occupation is confined to copying, examining, and checking accounts and to the registration and arrangement of non-confidential papers.

The four Lower Division Clerks in the Librarian's Department are employed in registering papers of old date.

15. The charge for stationery in the year 1885–6 was 11,744*l.*

Lord Salisbury is not aware of any direction in which greater economy combined with efficiency can be introduced into the department. A Table* is annexed showing the number of despatches, &c., received and sent annually from 1826 down to the end of last year.

The following are the yearly averages for the three decades since 1856:—

1857 to 1866 - -	51,985
1867 ,, 1876 - -	53,079
1877 ,, 1886 - -	73,927

In 1886 the number was 83,960; in 1887, 78,106; and last year, 75,702. It is to be observed that notwithstanding this great increase no addition has been made to the Diplomatic Establishment since the year 1857; in fact, it is practically less by two owing to the appointment of two clerks in 1866 and 1875, to act as private secretaries to the Permanent and Parliamentary Under Secretaries of State.

The staff which would otherwise have been totally inadequate is supplemented by assistance given by newly appointed attachés and consuls who, under the regulations, are required to attend for a certain time at the office before proceeding to their posts.

A supplemental clerk was added to the Treaty Department in 1887. Applications to the Treasury for three additional lower division clerks, one each for the Commercial and Consular Departments, and one for the legal assistant have been held over pending the result of the experiment of employing the type writer.

The re-organisation effected in the Diplomatic Establishment in 1881, of which the particulars are given below, had for its principal object a redistribution of the work, coupled with a re-arrangement of salaries. The number of clerks of the old establishment was reduced by four, and a corresponding number of clerks of the lower division was appointed.

ESTABLISHMENT BEFORE RE-ORGANISATION.

Salary.

——	Minimum.	Annual Increment.	Maximum.
	£	£	£
Chief Clerk - - - -	1,000	50	1,250
7 Senior Clerks - - -	700	25	1,000
8 Assistant Clerks - - -	550	20	650
10 1st Class Junior Clerks -	350	15	545
9 2nd do. - -	150	10	300
6 3rd do. - -	100	10	150

ESTABLISHMENT AFTER RE-ORGANISATION.

Salary.

——	Minimum.	Annual Increment.	Maximum.
	£	£	£
Chief Clerk - - - -	1,000	50	1,250
5 Senior Clerks - - -	900	50	1,000
7 Assistant Clerks - - -	700	25	800
20 1st Class Junior Clerks -	200	20	600
4 2nd do. - -	100	20	200
4 Lower Division Clerks - -	80	15 triennially.	200

‡ One of these officers is in receipt of a pension of 7*s.* a day from Indian Revenues.

* Not reprinted.

The Librarian's Department was not included in the above re-organisation. In view of the great increase of papers, and of the consequent heavy arrears of the registry and index, additions, both permanent and temporary, have been made to the staff.

The Chief Clerk's Department was re-organised in 1882 on the principle of substituting lower division clerks for some of the clerks previously employed; and the clerical staff of the Treaty Department has been strengthened by the appointment of two clerks, one of them of the lower division in place of a writer previously employed.

A second Assistant Under Secretary of State was appointed in 1876, principally for legal business.

This appointment was conferred in 1876 on Sir Julian Pauncefote, who in 1882 became Permanent Under Secretary of State. The post of Assistant Under Secretary of State then vacated by him was filled by the promotion of one of the clerks of the office; and Sir Julian Pauncefote continued to discharge the legal business in addition to his functions as Permanent Under Secretary.

In 1886 a legal assistant was appointed on the suppression of the counsel to the law officers on Foreign Office matters.

The "Playfair Scheme" has not been introduced in this Department otherwise than by the appointment of lower division clerks.

Lord Salisbury proposes that, in the first instance, the Permanent Under Secretary of State and the Chief Clerk should appear before the Commission; but I am to add that any other officials connected with the Department whose evidence the Commission may consider will be of value to them, will readily place themselves at their disposal.

The following is a list of the principal officers:—

Permanent Under Secretary of State	Sir P. Currie.
Parliamentary do.	Sir J. Fergusson.
Assistant do.	Sir V. Lister.
Do. do.	Sir T. Sanderson.
Chief Clerk	Sir F. Alston.
First Senior Clerk	Mr. C. M. Kennedy.
Second do.	Sir Percy Anderson.
Third do.	Mr. H. W. Hervey.
Fourth do.	Mr. H. S. C. Jervoise
Fifth do.	Hon. F. Bertie.
Librarian	Sir E. Hertslet.
Superintendent of the Treaty Department	Sir H. Bergne.

(Signed) P. CURRIE.

November 1, 1889.*

APPENDIX A.

REGULATIONS for the EXAMINATION of CANDIDATES for CLERKSHIPS on the ESTABLISHMENT of the FOREIGN OFFICE, as settled by Earl Granville with the Civil Service Commissioners, and approved by the Treasury.

[These appointments are filled up by limited competition.]

SUBJECTS FOR EXAMINATION

Obligatory.

1. *Arithmetic* (including Vulgar and Decimal Fractions).
2. *Handwriting and Orthography.*
   (These should include, besides correct spelling, writing a good bold hand, and forming each letter distinctly, proof that the Candidates can write quickly and correctly from dictation.)
3. *English Composition.*
4. *Précis Writing.*
5. *French* (Translation from and into, Writing from dictation, Writing a letter in French on ordinary subjects, and Conversation, paying particular attention to accent, genders, and tenses).
6. *German* (Translation from and into, Speaking, Writing, and Reading MS.
7. *Latin* (paying especial attention to parsing, as in the examination for Attachés).*
8. *General Intelligence* (Exercises as in the Attachés' examination).†
9. *Geography.*

Optional.

10. *History of Europe.* To be read in (1) Michelet's "Précis de l'Historie Moderne," and (2) Dyer's "Modern Europe" last edition, 1789 to 1871 (inclusive).
11. *Constitutional History of England.* To be taken from May, and from Hallam commencing with Chap. XIII. to the end of the work.
12. *Italian.*
13. *Spanish.*
14. *Ancient Greek.*

Two only of the optional subjects may be taken up, of which one must be a language and the other a history. If one optional subject only is taken up, it may be any one of the five specified.

The limit of age for candidates is between 18 years complete and 24 years complete, except in the case of those who may not reside with relatives, or have an established and respectable home in the metropolis, or in its immediate neighbourhood; in this latter case, the minimum of age is 20 years complete.

Foreign Office,
May 1, 1883.

* This return was originally sent in on the 31st of March 1887, but has been revised up to date.

APPENDIX B.

FOREIGN OFFICE:—DOWNING STREET.	Actual salaries in 1889–90.
	£
Secretary of State:	
Right Honourable the Marquess of Salisbury, K.G.	5,000
Under Secretaries of State:	
Sir P. Currie, K.C.B.	2,000
Right Honourable Sir James Fergusson, Bart., G.C.S.I., K.C.M.G., M.P.	1,500
Assistant Under Secretaries of State:	
Sir T. Villiers Lister, K.C.M.G.	1,500
Sir T. Sanderson, K.C.M.G., C.B.	1,200

Name of Department and Business assigned to it.	Name and Office of the Official Superintending the various Departments.		Actual salaries in 1889–90.
	Name.	Office.

Beyne, K.C.M.G.	Superintendent.	900

APPENDIX C.

EXTRACT from Report dated 20th December 1884.

II.—PRINTING.

Printing may be divided into—

(i.) Parliamentary.
(ii.) Confidential.
(iii.) Jobwork.

It is the rule of this office that no Confidential Papers or Papers for Parliament are printed without the sanction of the Secretary of State or of an Under-Secretary of State having been previously obtained, either verbally or in writing.

The Head of each Division in the office conveys to the printer the order from the Secretary of State or Under Secretary of State for the printing of such papers as may concern his Department.

This rule applies to the Confidential Papers as well as to those required for Parliament.

Soon after the expiration of each quarter, the printer (Mr. Harrison, himself or his son) submits to the Head of each Division his bill for printing the papers which have been ordered by him during the past quarter, and the Head of the Division writes his name against the items which have been printed for his Department, in testimony that the work was ordered through him, and was duly executed.

The bill is then passed by the Chief Clerk to the Stationery Office for payment.

(i.) Parliamentary Papers are printed by Messrs. Harrison at the Foreign Office. They comprise—

(*a.*) Papers on subjects of public interest, presented to Parliament by command.

(*b.*) Returns to addresses from either House of Parliament.

All matter for Parliamentary Papers is printed verbatim from original correspondence or documents, and receives such a degree of editing as may be necessary. Where papers required for Parliament have already been printed confidentially, the print is utilised whenever possible in order to avoid printing documents twice over.

(ii.) Confidential printing is also executed by Messrs. Harrison at the Foreign Office, and comprises papers for the use of the Cabinet, or of a special degree of secrecy. A strict account is kept of their disposal, and claims for payment are checked by a quarterly examination of papers at the Foreign Office by an officer of the Stationery Office.

(iii.) Jobwork printing consists of Royal Commissions, Exequaturs, Circular Despatches, Orders on the Paymaster-General, regulations for the examinations on appointment to the Foreign Office, diplomatic and consular services, student interpreterships, &c., and a few documents for office use of annual recurrence, all of which, with the exception of envelopes for foreign postage and office use, which are printed by Messrs. Robson and Sons under contract with the Stationery Office, are printed by Messrs. Harrison, but not confidentially.

N.B.—The paper for all printing purposes is supplied by the Stationery Office on quarterly requisitions signed by the chief clerk.

(2.)

MEMORANDUM.

Establishment of the Foreign Office.

The Foreign Office, as reorganized in 1881, is divided into eight Departments. Of these three are Political, and one partially so.

1. *The Eastern*, which deals with the affairs of Eastern Europe, Asiatic Turkey, Persia, and Central Asia, Egypt, and Tripoli.
2. *The Western*, which takes Western Europe, Morocco, Algiers, Tunis, and the Pacific Islands.
3. *The American*, which takes North, South, and Central America, China, Japan, and Siam.
4. *The Consular*, which, in addition to Consular business, deals with the East and West Coast of Africa and Slave Trade.
5. *The Commercial*, where Commercial and Sanitary questions are treated.
6. *The Chief Clerk's*, which is charged with the financial business of the Office, and the accounts of the Diplomatic and Consular Services, with the preparation of estimates, and rendering of accounts to be laid before Parliament, and also with a variety of questions connected with the general administration of the Department.
7. *The Library*, which has the custody, arrangement, and registry of the MS. correspondence, and of the printed Library, and where Memoranda on historical events, international cases, &c., are prepared.
8. *The Treaty Department*, in which the drafts of Treaties are prepared, and which also deals with Orders in Council, and various technical questions, such as extradition, nationality, copyright, and enforcement of the Foreign Enlistment Act, as well as questions of Ceremonial, Royal Letters, British and Foreign orders, &c.

In the Political Departments, only Clerks on the Establishment and members of the Diplomatic Service are employed, the latter on first appointment, by exchange, or by special permission. In the Consular and Commercial Departments, Lower Division Clerks assist in the routine and non-Confidential work. In the Consular Department, besides the staff of Clerks, Consuls are employed on first appointment, or by special permission.

In the Chief Clerk's, Librarian's, and Treaty Departments, Clerks corresponding with the "Supplementary" Clerks of the Treasury are employed, assisted by Lower Division Clerks. One Supplementary Clerk is attached to the Commercial Department. There is also one lady typewriter employed for commercial and other copying.

The numbers of each class are as follows:—

36	Clerks on the Establishment.
16	ditto (Supplementary).
1	Passport Clerk.
17	Lower Division Clerks.
1	Type-writer.
71	

In addition to the above there are—

1	Permanent Under Secretary.
1	Parliamentary Under Secretary.
2	Assistant Under Secretaries.
1	Chief Clerk and Accounting Officer.
1	Librarian.
1	Superintendent of the Treaty Department.
1	Legal Adviser.
1	Oriental Translator.

The Clerks on the Establishment are divided as follows:—

		Salaries.
5	Senior Clerks	900*l.* by 50*l.* a year to 1,000*l.*
7	Assistants	700*l.* „ 25*l.* „ 800*l.*
20	1st class Junior Clerks	200*l.* „ 20*l.* „ 600*l.*
4	2nd class „ „	100*l.* „ 20*l.* „ 200*l.*
36		

Of these four are employed as Private Secretaries, two to the Secretary of State (allowances, 300*l.* each); two to the Permanent and Parliamentary Under Secretaries (allowances, 150*l.* each). There are four Resident Clerks, 50*l.* a year each. The post of Translator of European Languages was abolished in 1886, and these translations are now entrusted to three Junior Clerks, selected by competition, to whom allowances amounting in all to 292*l.* a year are paid in lieu of the sum of 400*l.* formerly paid for this service.*

The Supplementary Clerks are distributed as follows:—

Chief Clerk's Department.

		Salaries.
1	1st class	400*l.* by 20*l.* a year to 600*l.*
2	„	400*l.* „ 20*l.* „ 500*l.*

Librarian's Department.

1	Sub-Librarian	550*l.* by 20*l.* a year to 650*l.*
2	1st class Clerks	400*l.* „ 15*l.* „ 500*l.*
2	2nd „ „	250*l.* „ 15*l.* „ 360*l.*
4	3rd „ „	100*l.* „ 10*l.* „ 240*l.*

Treaty Department.

1	Assistant	550*l.* by 20*l.* a year to 650*l.*
1	Clerk	250*l.* „ 15*l.* „ 360*l.*
1	„	100*l.* „ 10*l.* „ 240*l.*

Commercial Department.

1	Clerk*	250*l.* by 15*l.* a year to 360*l.*
16		

The Lower Division Clerks (salaries, 80*l.* by 15*l.* triennially to 200*l.*)

Commercial Department		2
Consular	„	2
Chief Clerk's	„	8
Librarian's	„	4
Treaty	„	1
		17

In addition to their salaries, eleven of the Lower Division Clerks are in the receipt of duty-pay—one at the rate of 100*l.* a year, one 30*l.* a-year, four 25*l.* a-year, and five 20*l.* a year.

Total number of Staff of all grades, 80.

The hours of work are nominally from 12 to 6, except for the Commercial Department, the Book-keeper's branch of the Chief Clerk's Department, and the Passport Office, which open at 11; but Departments rarely close at 6, and it is understood that the Clerks should remain as long as there is any work to do. The responsibility in the matter rests with the Heads of Departments.

The yearly allowance of leave is two months, and one month for the Lower Division Clerks.

The Diplomatic Service is separate from the Establishment of the Foreign Office, but all members of it work for at least six months in the Office on first appointment, and occasionally afterwards.

Exchanges, temporary or permanent, between Clerks in the Foreign Office and members of the Diplomatic Service can also take place by sanction of the Secretary of State, and transfers from one Service to another without exchange have occasionally been made.

Entrance to the Foreign Office is by limited competition. An average of about eight candidates, nominated by the Secretary of State, compete for each vacancy.

For purposes of comparison, Reports from Lord Lytton and Sir E. Malet respecting the establishments of the French and German Foreign Offices are appended to this Memorandum.

Foreign Office,
May 10, 1889.

* 250*l.* to Translator; 150*l.* to Clerks for knowledge of languages.
† Also an allowance of 100*l.* a year for editing Commercial Reports.

Appendix.

APPENDIX.

No. 1.

The Earl of Lytton to the Marquis of Salisbury.
(Received April 4.)

(No. 176.)

My Lord, Paris, April 3, 1889.

With reference to your Lordship's despatch No. 146 of the 28th ultimo, I have the honour to transmit herewith a table showing the numbers and classification of the French Foreign Office during the year 1888.

The "Direction des Affaires Politiques et du Contentieux," the "Direction des Affaires Commerciales et Consulaires," and the "Service du Protocole," or Treaty Department, are each under the management of a "Directeur," with the rank of Minister.

The Staff of the Political Department are interchangeable with the members of the Diplomatic Service, and that of the Commercial Department with the members of the Consular Service.

The "Expéditionnaires" are Second-Class Clerks.

I have, &c.
(Signed) Lytton.

MEMORANDUM.

Queen's Foreign Service Messengers.

Queen's Foreign Service Messengers are employed under the Foreign Office to carry, between London and foreign capitals, despatches and communications of a confidential character which it is not considered advisable to intrust to the ordinary post.

In 1869 there were 17 of these Messengers; in the following year they were reduced to 15; in 1873 to 12; and, under a Minute approved by Lord Granville in 1883, they now number 10 only. In consequence of the increased facility and rapidity of communication, and of the establishment of a local service between Paris and Calais, it is in contemplation, as vacancies occur, still further to reduce the number.

The following are the fixed journeys now performed by the Foreign Service Messengers:—

A fortnightly service to *Constantinople* by way of Paris, Stuttgardt, Munich, Vienna, Belgrade, and Sophia.

A fortnightly journey to *Berlin*.

A fortnightly journey, in the intermediate weeks, to *St. Petersburgh*, by way of Berlin.

The Messengers are held in readiness for extra journeys, as required.

The Messengers receive salaries of 400*l.* a year, with an allowance of 1*l.* a night while employed abroad. The Messengers charge in their accounts their actual expenses, that is to say, the railway fares and the sums paid for excess luggage. Such items as cab hire, fees to guards, porterage, &c. are settled according to a table of fixed allowances, calculated, as far as possible, so as to reimburse the Messenger his actual outlay, and no more. This table is revised from time to time so as to adapt it, as far as may be, to altered circumstances, the last occasion of such revise having been in 1887, when further savings, estimated at about 250*l.* a year, were effected.

Home Service Messengers.

There are eight Home Service Messengers attached to the Foreign Office. Under an arrangement agreed to by the Treasury in 1880, the Messengers are to consist of two classes, the four seniors to constitute the first class, and to receive salaries of 200*l.*; the second class to receive 150*l.* only; but this arrangement cannot be fully carried out until the retirement of some of the present Messengers.

Officekeepers, &c.

The internal service of the office is performed by eight officekeepers. It has been agreed with the Treasury that, as vacancies occur, they shall be formed

Appendix.

into two classes, the first class to consist of three, of whom two are resident:—

——	Salary.
1st Class—	
Officekeeper and Housekeeper (resident).	200*l.*, rising to 250*l.*
Officekeeper who has also night duty (resident).	150*l.* fixed.
Officekeeper (non-resident) - -	150*l.* „
2nd Class—	
Five Officekeepers, at (each) -	100*l.* „

Full effect can only be given to this arrangement as vacancies occur.

The other office servants are:—

——	Salary.
Doorkeeper (resident) - - -	100*l.*
Ditto (non-resident) - - -	90*l.*
Ditto, Passport Office (non-resident) -	20*s.* to 30*s.* a week.
Coal-porter and Lamplighter (resident)	25*s.* a week.
Assistant ditto (non-resident) - -	17*s.* 6*d.* a week.
Librarian's Messenger (resident) -	90*l.* fixed.
2nd ditto (non-resident) - - -	60*l.*, rising to 85*l.*

The net savings effected in the salaries of the Messengers, Officekeepers, &c., since 1871, amount to 2,494*l.*

Female Servants.

Ten housemaids, with wages ranging from 20*l.* to 14*l.* a year each, with board wages at 12*s.* a week each.

Five charwomen, four at 14*s.* a week each; one at 6*s.* a week.

Foreign Office,
May 1889.

(4.)

MEMORANDUM.

Diplomatic Establishment.

The constitution of the Diplomatic Service remains based in all important particulars on the recommendations made in the Report of the Select Committee on Diplomatic and Consular Services, which was presented to Parliament in 1871.

The Service consists at present of 132 members, who are divided into 14 classes, as follows:—

7	Ambassadors.
17	Envoys Extraordinary and Ministers Plenipotentiary.
1	Minister Plenipotentiary.*
8	Ministers Resident.
3	Chargés d'Affaires.
1	Agent and Consul-General.
7	Secretaries of Embassy.
16	„ Legation.†
7	Military and Naval Attachés.‡
2	Commercial Attachés.
34	Second Secretaries.
4	„ „ (local rank).§
19	Third Secretaries.
6	Attachés.
132	

There are also eight Honorary Attachés who receive no pay, and are not qualified for promotion.

In addition to the above, there are employed and paid from the Diplomatic Vote, 8 Translators and Clerks, 4 Dragomans and Interpreters (one with local rank as Second Secretary), 1 Registrar and Librarian (local rank as Second Secretary), 2 Physicians, 6 Chaplains, 1 Oriental Second Secretary (local rank as Second Secretary), 1 Chinese Secretary, and 1 Japanese Secretary (local rank as Second Secretary).

The salaries of the Ambassadors vary from 9,000*l.* to 5,500*l.* a year; those of the Ministers from 6,000*l.* to 1,250*l.* a year; those of Chargés d'Affaires, from 1,500*l.* to 1,000*l.*; and those of Secretaries of Embassy from 1,000*l.* to 700*l.*

Secretaries of Legation (with certain exceptions, see note) receive 500*l.* a year;* Commercial Attachés, 1,300*l.* and 1,000*l.* a year; Second Secretaries, 300*l.* to 500*l.* a year (this latter sum is assigned to the Senior at Peking, the general maximum being 450*l.*), Third Secretaries, 150*l.* a year.

Secretaries of Legation receive an allowance of 250*l.*, after 10 years' service, in addition to their salary.

Attachés do not receive salary until they have completed two years of actual service, after which period they obtain Commissions as Third Secretaries.

The salaries of the Military and Naval Attachés are provided for in the Army and Navy Votes.

The Registrar and Librarian at Paris, the first Dragoman at Constantinople, the Japanese Secretary at Tôkiô, and the Oriental Second Secretary at Tehran receive pay as such, but have local rank as Second Secretaries in the Diplomatic Service.

Allowances of 100*l.* a year are granted to Third Secretaries after examination before the Civil Service Commissioners, for knowledge of Public Law; and special allowances of 100*l.* a year are awarded to Secretaries or Attachés on proving that they possess a competent knowledge of the Russian, Turkish, Persian, Arabic, Japanese, or Chinese language while serving in any country where such language is vernacular.

Allowances according to a fixed scale are made—

(1.) For outfits on first appointment, promotion, or transfer.

(2.) To Secretaries acting as Chargés d'Affaires in the absence of the Heads of Missions.

Sums ranging from 100*l.* to 300*l.* a year are granted at Legations in South and Central America for clerk hire.

Embassy or Legation houses have been purchased or built for Her Majesty's Representatives at Paris, Vienna, Berlin, Constantinople, Rome, Madrid, Brussels, Lisbon, Washington, Tehran, Tangier, Peking, Tôkiô, and Bangkok; and houses are rented by Her Majesty's Government at St. Petersburgh, Copenhagen, and Athens, furniture for the state and official rooms being supplied, or an allowance granted in lieu thereof.

In other cases, with certain exceptions in Europe and South America, allowances are granted for house-rent.

* Sir E. Baring, who holds the rank of Minister Plenipotentiary in the Diplomatic Service, but who receives salary as Her Majesty's Agent and Consul-General in Egypt.

† One receives salary as Consul-General at Buda Pesth.

‡ Paid out of military and naval funds.

§ Rank being merely honorary, they do not receive salaries as Second Secretaries.

* Secretaries of Legation at Washington and Rio receive 700*l.* a year; at Peking and Tôkiô, 800*l.*; and at Tehran, 750*l.*

Secretaries of Embassy or Legation, Second and Third Secretaries, and Attachés, are, on first appointment, or on any subsequent removal for promotion or other public reason, allowed their actual travelling expenses according to regulations laid down.

Heads of Missions are appointed for not more than five years. At the expiration of such period, the question of their reappointment is open for the Secretary of State's consideration.

Members of the Service, on attaining the age of seventy years, are retired on the pension for which they may be qualified. But it is within the discretion of the Secretary of State to relax this rule when he may deem it beneficial to the Public Service.

The ordinary period of annual leave to which Heads of Missions are entitled is sixty days. They are also permitted to accumulate leave, *i.e.*, to take at one time leave to which they have become entitled during two years, on the condition that they shall have been present at their posts during the whole of the year preceding that in which leave is applied for.

During ordinary leave deduction is made from the salaries of Heads of Missions to provide for the allowances of the Acting Chargés d'Affaires. On the expiration of the sixty days or of the accumulated leave the deduction is at the rate of one-half their salaries.

Secretaries of Embassy and Legation and Junior Members of the Service are granted two months' leave in every year. They are also permitted to accumulate leave. Homeward and outward journeys are not counted as leave, it being understood that due expedition is used.

The question of exchanges, temporary or permanent, between members of the Diplomatic Service and Clerks in the Foreign Office, has been dealt with in the Memorandum relating to the Foreign Office.

Entrance to the Diplomatic Service is obtained by limited competition. The average number of candidates nominated by the Secretary of State to compete for each vacancy is about six.

Foreign Office,
May 10, 1889.

Appendix.

(5.)

MEMORANDUM.

Consular Service.

A COMPARISON of the expenditure for Consular services for the year 1869–70 (the earliest which is readily available) and that for 1887–88, included in the last Appropriation Account, gives the following results :—

	Gross Expenditure.	Receipts.	Net Expenditure.
	£	£	£
1869–70 -	262,421	50,523	211,898
1887–88 -	262,328	101,567	160,761

These figures show a reduction of over 50,000*l.* in the cost of the services to the Exchequer.

As regards what is obtained in return for the expenditure, reference should be made to the Reports of the two Committees of 1858 and 1872 on the Consular Service.

The Committee of 1872 summarised the recommendations of the previous Committee as follows :—

1. The establishment of a system of Consular education and promotion, chiefly with the view of preventing the necessity of employing any other than British subjects in the Levant and North Africa.
2. That Consuls should be prohibited from trading.
3. Diminution of the number of Vice-Consuls in Europe, and general abolition of their licence to trade.
4. Organisation and classification of the Service.
5. Appropriation of all fees to Government account (except in case of Unpaid Consuls), and collection of those fees by means of stamps if practicable.
6. Revision of Consular Instructions.

With regard to these recommendations the Committee, after taking them *seriatim*, and commenting upon the limited action which had been taken on them, stated that they had been unable to ascertain that they had ever been seriously taken in hand as a whole. The Committee, however, seemed to be impressed with the difficulties of the subject on the score of expense; but adverting to the tour of inspection which had been recently undertaken by Mr. Kennedy in Turkey and Egypt, recommended that it should be followed up without loss of time in other parts of the world.

The following is a summary of the steps taken to give effect, as far as practicable, to the foregoing recommendations :—

1. A system of education and promotion has been adopted for Consular officers in Turkey, the Levant, Persia, Greece and Morocco, where all posts of importance are now held by British subjects.

On Sir P. Currie's return from Constantinople, whither he accompanied Lord Salisbury in 1876, he prepared a scheme, which was accepted by the Government, for the education of young men selected by open competition for Interpretorial and Consular work. The arrangement, which has been in force for over 10 years, has resulted in providing the following set of officers :—

1	Vice-Consul Interpreter attached to the Embassy at Constantinople.	
1	Ditto attached to the Consulate-General at Constantinople.	
1	Ditto attached to the Legation at Tehran.	
1	Consul at - - -	Suakin.
1	Ditto - - -	Bengazi.
1	Vice-Consul - - -	Sophia.
1	Ditto - - -	Beyrout.
1	Ditto - - -	Van.
1	Ditto - - -	Alexandria.
1	Ditto - - -	Bourgas.
1	Ditto - - -	Monastir.
1	Ditto - - -	Rhodes.
1	Ditto - - -	Scutari.
1	Assistant - - -	Constantinople.
1	Ditto - - -	Ditto.
1	Ditto - - -	Ditto.
1	Ditto - - -	Smyrna.
1	Ditto - - -	Beyrout.
1	Ditto - - -	Cairo.
1	Ditto - - -	Sophia.
1	Ditto - - -	Salonica.
1	Ditto - - -	Tangier.
4	Students in training at -	Ortakeui.
26		

The Service being full, admission to it is at present suspended.

2. As to the prohibition of Consuls from trading.

The Consuls, with few exceptions, are so restricted. The restriction might be further extended were there more funds available. To make it universal as regards all Consuls and Vice-Consuls would entail enormous additional expense if the present Staff were retained, while serious inconvenience would be caused to British commerce if all Consular posts were abolished which, though useful, have not sufficient business to justify a salaried officer.

3. As to diminishing the number of Vice-Consuls in Europe allowed to trade.

This has been to some extent carried out by the promotions consequent on the institution, in the Levant, of the system described under No. 1, but it has not been possible to carry it further on account of the expense.

4. As to classifying the Service.

The general* Consular Service is now distinctly classified, being divided into two branches :—

(*a.*) Those who enter the Service as a career, after passing an examination before the Civil Service Commissioners, and are prohibited from trading;

* This does not apply to the Levant and China Services, to which admission is obtained by open competition.

Appendix.

(b.) Those either engaged in trade or who are permitted to do so.

This classification is found to work well, and to insure uniformity and good discipline.

5. As to appropriation of fees to Government.

Consular fees are now levied without exception on account of Her Majesty's Government, and are collected by means of fee stamps. The fees have also been extended and readjusted, as recommended by the Committee of 1872. Careful attention has been given to this point by the Foreign Office, with the satisfactory result that under the new Table of Consular Fees imposed in 1885, and revised in 1887, the fees, &c. have risen from 69,578*l.* in 1884–85 to 101,567*l.* in 1887–88.

6. As to the revision of the Consular Instructions.

The Board of Trade Instructions have been revised from time to time, the last revise having been in 1888.

The General Consular Instructions were revised in 1879; they have now been entirely reconsidered, chapter by chapter, revised, and rearranged. They will shortly be distributed in their new shape.

As regards the continuance of the visits of inspection recommended by the Committee of 1872, it may be mentioned that shortly afterwards such visits were paid by Mr. Wylde in Spain, Portugal, Morocco, Italy, and Greece; by Mr. Kennedy in France, Belgium, and Holland; and by Mr. Buckley in Germany and other parts of Northern Europe. The Reports received were in great part adopted. Recently Sir C. Hill visited and reported fully upon the Consular establishments in the West Indies and other parts of the Spanish Main.

The Consulates in the United States were reorganized in 1886, after receipt and consideration of a Report made by Mr. Saurin, then Secretary to Her Majesty's Legation at Washington, after a visit of inspection through the Western States of the Union.

Steps have been taken in accordance with other recommendations of the Committee of 1872. Thus an allowance of a certain additional number of years has been given in calculating pensions for residence in tropical and unhealthy climates. The regulations as to leave of absence have been modified, and travelling allowances assigned after five years of uninterrupted residence, or on medical certificate. Redundant posts have been abolished.

The funds voted by Parliament for Consular services have been applied, so far as circumstances have allowed, in the directions recommended by the Committees of 1858 and 1872.

It has not been found practicable to give effect to the proposal to consolidate still further the functions of Diplomatic and Consular officers.

The care bestowed by Consular officers upon Commercial Reports is one of the most marked features of progress in the Service.

The object of the Foreign Office has been to adapt the provision made for Consular duties in each post to the special requirements of the place, and with that view the arrangements are constantly revised with Treasury sanction. Salaries reduced in one place are increased in another. Non-trading Consulates are transferred from posts where business is decaying to others where it is in process of development, and in this manner every effort is made to keep pace with the changing demands of British commerce.

The Consular Service in China and Japan and Siam, of which the Committee of 1858 expressed their unqualified approbation as a well-organized establishment, retains its efficiency.

The number of Consulates in China was increased from 13 to 19 as a consequence of the Convention of Chefoo, but no additional charge was thereby imposed on the Vote, as the money was provided by the suppression of the class of Interpreters, which was referred to as desirable in the Report of the Committee of 1872. Savings effected by the abolition of the Vice-Consulate at Whampoa have lately been applied, with Treasury sanction, to equalizing the salaries of certain Consuls in China, whose minimum has been raised from 700*l.* or 750*l.* to 800*l.* a year. An inquiry into the China Consular Establishment is about to be held by Mr. Howard, Secretary to Her Majesty's Legation at Peking, who has been instructed to make a tour of inspection round the several Consulates in China with a view to ascertain whether any readjustments and economies can be effected.

It is also proposed to establish a Regulation under which Consular officers in China in the receipt of salaries of 400*l.* a year and over will be required to contribute towards the cost of the Medical Establishment.

Foreign Office,

May 1889.

Paper handed in by Sir Philip Currie. See Question 26,840.

CONDITIONS OF ADMISSION TO THE FRENCH, GERMAN, AUSTRIAN, AND ITALIAN FOREIGN OFFICES.

France.

To obtain admission to the French Foreign Office candidates must in the first place obtain authority to pass the examination. For that purpose they must apply to the Minister for Foreign Affairs stating their qualifications, where they have studied, what family they belong to, and other particulars. The Minister has full power to admit or reject any candidate at this preliminary stage. The candidates whose applications have been granted have then to undergo a competitive examination.

Those who are successful are called upon to pass a second examination after a period of three years' probation in the Foreign Office. It is only after this second examination that appointments are made to third secretaryships abroad, or to corresponding posts in the Foreign Office.

Germany.

All nominations and appointments to the German Foreign Office and Diplomatic Service are entirely in the hands of the Chancellor of the Empire, or of the Secretary of State for Foreign Affairs. There is no competitive examination.

Selection is generally made from among those who have been at the Universities and have passed the general Civil Service examination, which includes law. On personal presentation or recommendation, they are admitted to serve either as attachés abroad, or, on probation, in the Foreign Office. After serving abroad for one year attachés are required to pass a test examination in history and international law, and also a short oral examination. They are then appointed to be secretaries.

The copyists and clerks of the lower division are chosen from among those who have passed through the public schools, after reliable information has been obtained that they are trustworthy and respectable.

The political department of the Foreign Office is separate, and nomination to it depends entirely upon selection by the Chancellor, who calls in whomever he likes from foreign service or anywhere else.

Austria.

Nominations and appointments in the Austrian Foreign Office and Diplomatic Service are in the hands of the Minister for Foreign Affairs.

Candidates are employed for one year in the Foreign Office or at some Embassy or Legation abroad, after which time they are required to pass an examination.

Italy.

Candidates are admitted to compete for admission to the Italian Foreign Office and Diplomatic Service on the following conditions:—

1. That they are Italian subjects.
2. That they have completed the 20th and not exceeded the 30th year of their age.
3. That they have been granted a degree (diploma) by one of the Universities, or by an equivalent institution.
4. That they are provided with sufficient means. Candidates have to prove that they possess an annual income of at least *3,000 lire for the Foreign Office, and †8,000 lire for the Diplomatic Service.
5. That they are of good family and well connected, and of good conduct.

The successful candidates in the competitive examination having satisfied the Authorities on the above points, may express their wishes as to whether they will enter the Foreign Office, or the Diplomatic or Consular Services; but the appointments ultimately rest with the Minister for Foreign Affairs, who determines to which branch of the service they shall be named, after having taken into consideration their qualifications and the circumstances of their family and fortune.

* About 110*l.* † About 300*l.*

Paper handed in by Sir Philip Currie. See Question 26,983.

INSTRUCTIONS TO HER MAJESTY'S DIPLOMATIC REPRESENTATIVES AND CONSULS IN REGARD TO TRADE.

The sign manual instructions of Her Majesty's ministers contain the following passage:

"You will make the commercial interests of Great Britain an object of your constant attention."

Circular instructions issued at various dates, from 1857 to the present time, have directed attention to particular subjects as affecting British commercial interests, and have called for reports on these matters. In addition to reports on special questions, two regular and set reports are required to be sent home every year, from each of Her Majesty's missions in foreign countries; one, commercial, on the industry, trade, and general statistics of the country; the other on its budget and finances generally. As regards industrial undertakings, Her Majesty's diplomatic representatives, and consuls likewise, are instructed that Her Majesty's Government do not seek to promote particular enterprises, but limit recommendations given to British subjects of good standing and respectability to the purpose of obtaining for them access to the authorities before whom they seek to lay their proposals. An exception has been made in the case of China and Japan, where there have been complaints of active intervention on the part of some foreign representatives in support of their merchants. Her Majesty's representatives in these countries have in consequence been authorised to give their support to British merchants in cases where they consider that the interference of foreign representatives is exercised to their detriment.

The instructions to consuls are to the following effect:—

Their general instructions contain the following paragraph:

"It is the duty of consular officers to protect and to promote the lawful trade of Great Britain by every fair and proper means, and to uphold the rights and privileges of British merchants. Whenever changes are made which affect trade, either as regards general regulations or by increasing or diminishing duties or charges, such changes are immediately to be communicated by consular officers to the Secretary of State, and to be made known to resident British merchants."

Consuls are required, in addition to sending despatches at the time on any matters which concern British trade, to forward every year a commercial report on the trade of their district during the preceding year. At ports navigation is also included.

In a circular instruction, dated January 25th, 1879, they were instructed to advert in their annual commercial report to the following points:—

(*a.*) Any local impediments to British trade;
(*b.*) Any opportunities which may present themselves for its extension;
(*c.*) Its progress and relative importance in the Consular district as compared with the trade of any other countries.

In 1882 consuls were told that their reports would in many cases become "more useful by enumerating the "various articles of British or Colonial produce or manufacture for which a favourable market appears to present "itself in your consular district, as well as those for "which there is either no demand or which can be more "readily supplied from other countries. Opportunities "for return freights, the export trade to the United "Kingdom, industrial institutions, new inventions or "appliances which may affect trade and commerce, "harbour improvements and dues, landing and embarking "facilities, average rates of freight, and public announcements for tenders for the execution of public works, are "also matters which might with advantage be noticed as "opportunities arise."

In 1885 they were further instructed:—

"Other subjects which may be included in your trade report, namely, agriculture, cattle, population, industries, public health, and public works, should be treated chiefly from the point of view of commercial interests. British trade, and the means which may be suggested for its development, should form the principal object of these reports. The market prices of commodities, rates of freight, insurance, &c., should, as a rule, only be mentioned in general terms, unless you have any particular reason for a fuller statement. Fuller details respecting any of these matters may form the subject of despatches in your commercial series whenever it is advisable to report on them."

Improvements in the form of statistical tables and the manner of setting forth quantities and values of goods have likewise been given from time to time. Agricultural reports, as well as those which are strictly designated commercial, are also now required to be furnished from Her Majesty's missions and consulates.

The general question of the assistance to be rendered to British trade by Her Majesty's diplomatic representatives and consular officers was very fully considered in 1886, and correspondence on the subject is contained in the Parliamentary Paper, Commercial, No. 16, 1886, two parts.

Circular instructions which enter fully into the circumstances of the case were issued by the Earl of Rosebery on the 31st of July 1886. These instructions recorded an expression of opinion that members of both services displayed the greatest readiness in affording their hearty co-operation to British traders; and added "all that is "therefore needed is a continued activity, not only in "pursuing the methods hitherto adopted, but in discovering any others that can legitimately be employed."

As regards the relative duties in respect to commercial matters of the diplomatic and consular services, the consular instructions establish a general rule that the latter is subordinate to the former; and that the diplomatic representative of Her Majesty is, subject to the authority of the Secretary of State, invested with full control over Her Majesty's consular officers within the country in which he resides. The consul receives his instructions on all important matters direct from the Secretary of State. On questions of ordinary current business, he is guided by instructions from the diplomatic representative.

Correspondence on subjects of interest, commercial reports, and papers relative to the action of local authorities, as a rule, pass through the embassy or legation; and when it is expedient, in order to avoid loss of time, that direct communication should pass between the Foreign Office and consulates, copies of the correspondence are supplied to Her Majesty's representative.

(18.)

Paper handed in by Sir Philip Currie, see Question 27,066.

EXPLANATION OF INCREASE OF SUB-HEAD A OF DIPLOMATIC SERVICE VOTE.

	£
SUB-HEAD A.—Salaries and rent for the year 1871–2 was - - - - - -	151,000
SUB-HEAD A.—Salaries and rent for the year 1889–90 was - - - - -	178,738
Showing an increase on this sub-head of	27,738

This increase is chiefly explained by the fact that the sum of 151,000*l.* provided in the Estimate for the year 1871–2 *excluded* the salaries of the second and third secretaries, &c., which formed a separate sub-head, whereas the sum of 178,738*l.* voted for the year 1889–90 *included* such salaries. Adding, therefore, for purposes of comparison, the sum of 23,276*l.* to 151,000*l.*, the

Appendix

increase is reduced to 4,462*l.* as shown in the following statement:—

Additions to the Vote.

	£
Salaries, &c. consequent on re-establishment of Her Majesty's mission in Mexico	4,500
Salaries, &c. of the commercial attachés at Paris and St. Petersburg	2,500
Salaries, &c. of Her Majesty's diplomatic representatives in Egypt, Bulgaria, Montenegro, Morocco, Roumania, Servia, Siam, and Uruguay	17,310*
Increase in the salaries of Her Majesty's representatives in Italy and Spain on the rank being raised to that of ambassador	2,500
Increase in salary of Her Majesty's ambassador in Germany	500
Increase in salary of Her Majesty's representative at Darmstadt	550
Growth of the salaries of second and third secretaries consequent on the recommendations of the Diplomatic Committee of 1871	6,228
Sundry increases of the salaries of the secretaries, clerks, &c. employed in Her Majesty's legations	1,881
Total additions to the Vote	35,969

* Of this sum 9,300*l.* was transferred from the Consular Vote.

Reductions in the Vote

	£	£
Sundry rent allowances transferred to Office of Works	7,220	
Salaries of Her Majesty's legation in China transferred to a separate sub-head of the Vote	8,100	
Withdrawal of Her Majesty's legation in Venezuela	2,150	
Transfer of naval and military attachés to Army, &c. Votes	1,500	
Withdrawal of secretary employed at Rome	1,000	
Reduction of salary of Her Majesty's ambassador at Paris	1,000	
Reduction of the salaries of Her Majesty's representatives in Bavaria	2,800	
Reduction of the salaries of Her Majesty's representatives in Wurtemburg	1,600	
Reduction of the salaries of Her Majesty's representatives in Belgium, Brazil, Denmark, and Portugal	1,300	
Sundry reductions	3,457	
		30,127
		5,842
Deduct in respect of vacancies, &c. (*see* end of Estimate)		1,380
Leaving a net increase on the Vote for 1889–90 as compared with the Vote for 1871–72 of		4,462

(19.)

Paper handed in by Sir Philip Currie. See Question 27,079.

CHAPLAINS.

Vienna.

In 1842 Sir R. Gordon, Her Majesty's Ambassador, strongly urged the re-appointment of a chaplain to the Embassy at Vienna, on the ground that the number of British subjects residing there had greatly increased.

A question arose in 1874–5 with regard to the erection of an English church at Vienna, the Austrian ecclesiastical law requiring that priests or pastors in churches recognized by the State should be Austrian subjects. The difficulty was eventually overcome by the Emperor sanctioning the erection of the church on condition that it was placed under the control and jurisdiction of the British Ambassador, the officiating clergymen being allowed to be either the chaplain of Her Majesty's Embassy, or a private chaplain of the Ambassador, or any clergyman of the Church of England who might be provided by the British residents with the approval or consent of the Ambassador acting under instructions of Her Majesty's Principal Secretary of State. The funds for building the church were raised by public subscription; Her Majesty's Government did not contribute anything towards its erection, or accept any pecuniary responsibility, direct or contingent, in connexion with its maintenance, and the property was not vested in them, but in the Bishop of London and his successors.

Constantinople.

The post of chaplain to the Embassy at Constantinople has existed as a Government appointment since 1825, the chaplain having previously been paid by the Levant Company.

In addition to the services in the Embassy chapel, and his general duties in connexion with the large British community at Constantinople, the chaplain is expected to visit the sick in the British hospital, and if required to attend as a parochial minister to any school which is set on foot, with the sanction of Her Majesty's Ambassador, for the education of the children of British artizans residing in Pera, or in the neighbourhood. The chapel is open for the use of the large number of British seamen who resort to Constantinople.

Madrid.

The chaplaincy at Madrid was established in 1859, the British residents undertaking to contribute a certain sum towards its support.

The chaplain was appointed under the Consular Act (6 Geo. IV. c. 87), but he was also considered to be chaplain to the British Minister, as the services could only be performed in the Legation, the Spanish laws on the subject of religious observances, other than those of the Church of Rome, being at that time very stringent.

In 1861, the subscriptions having fallen off, a fixed salary was granted to the chaplain.

Athens.

In 1873 Her Majesty's Minister at Athens represented that the appointment of chaplain there had been vacant for two years, that the English church had consequently been closed, and that the British community were therefore indisposed to contribute to its maintenance; and that unless funds were supplied and a clergyman provided, the church would soon fall into decay. The church was built in 1842 at a cost of about 3,000*l.*, 800*l.* of which was contributed by Her Majesty's Government, and the rest raised by private subscription.

Under the circumstances 100*l.* per annum was granted towards the stipend of a chaplain.

Copenhagen.

The chaplain at Copenhagen draws from Her Majesty's Government a consolidated salary of 200*l.* a year, of which 85*l.* is fixed, and the balance of 115*l.* is contingent upon a similar amount being contributed by the British residents.

A few years ago a church was built by subscriptions from the residents and others.

Copenhagen is frequented by large numbers of British sailors.

Pekin.

In 1864 Sir F. Bruce, Her Majesty's Minister in China, reported that a room set apart in the Legation at Peking for Divine service no longer afforded adequate accommodation, and that he had fitted up a detached building in the garden. The expense of converting this building into a chapel, 78*l.* 1*s.* 10*d.*, was sanctioned, and on the recommendation of Sir F. Bruce a chaplain to the Legation was appointed with a salary of 200*l.* a year, which sum was considered sufficient provided the selection was made from among the missionaries, otherwise a higher salary and lodgings would have to be provided.

(20.)

Paper handed in by Sir Philip Currie. See Question 27,114.

SALARY of PHYSICIAN at CONSTANTINOPLE

Dr. Dickson, in addition to his salary of 300*l.* a year as Physician to the Embassy, receives 400*l.* a year as British Delegate to the Board of Health.

He was appointed to the latter position in 1861. Lord Lyons, then Chargé d'Affaires at Constantinople, recommended that he should receive additional remuneration, as his new duties interfered with other professional services, and as it was desirable that he should be placed in a position not less favourable than the French Delegate, who received 400*l.* a year as Delegate.

Further information having been called for, Sir H. Elliot, Her Majesty's Ambassador, reported that the Board was a permanent institution, rendered necessary by the divergent views of different European Governments with regard to the enforcement of quarantine, and that British interests would seriously suffer from the absence of a British Delegate from the Board.

The Treasury, to whom the matter was referred, after full consideration of the nature of Dr. Dickson's duties, approved of the grant to him of an annual allowance as Delegate of 400*l.*

Information as to the System of Pensions of the Diplomatic Service in Foreign Countries.

Germany.

Pensions to German diplomatic officers are granted in accordance with the regulations generally applicable to all officers in the service of the Government.

Imperial officials are entitled to a pension for life.

If, after 10 years' service, they become permanently disabled by bodily or mental disease or weakness.

If, before the completion of 10 years' service, they have, while actively employed, or owing to such employment, contracted through no fault of their own, disease or bodily injury, and have thereby become disabled.

After 10 years' service, the pension amounts to fifteen-sixtieths of the salary; with a further addition of one-sixtieth in respect of each additional year's service up to a maximum of forty-five-sixtieths of the salary.

If a pension is granted before the completion of 10 years' service, it is limited to fifteen-sixtieths of the salary.

Years of service are counted double in case of employment in East, South, or West Africa, East and Central Asia, Central and South America, and in the Pacific.

If an official is temporarily retired for reasons connected with the public service, he receives three-fourths of his salary.

If an official dies while in the service, his heirs receive the salary due for the quarter following the month in which the death occurred.

If a pensioned official dies, his widow or lawful issue receive the pension due for the month following that in which the death occurred.

France.

Pensions to members of the French diplomatic service are granted according to a special scale, and are considerably in excess of those granted to the general Civil Service under the provisions of the law of the 9th June 1853.

A deduction of 5 per cent. is made from all salaries for the Pension Fund.

Diplomatic officers are only entitled to pensions when they have reached the age of 60 years, and after 30 years' service.

Service out of Europe is reckoned at half as much again in the calculation of pensions, and after 15 years' service a pension can be granted at the age of 55. Special pensions are granted when officials are unable to perform their duties owing to having risked their lives, or met with some accident in the public service. In the case also of ill-health, pensions can be granted at the age of 55, and after 20 years' service.

A pension is also granted to the widow of an official who has obtained, or is entitled to, a pension; its amount being limited to one-third of the pension which her husband had obtained, or was entitled to.

The same pension is also allowed to orphans of officials, as long as they are minors, should the mother be dead or disqualified for a pension.

It must be noted, however, that in addition to the pension list each minister has a certain allowance for what is classed as "secours," which is really given in pensions and allowances. In the case of the Foreign Office the vote asked for this year, on this head, is fcs. 190,000 (7,600*l.*).

Italy.

Pensions to Italian diplomatic officers are granted in accordance with the regulations generally applicable to all civil officers in the service of the Government.

They have a right to retire with a pension:

a. After 40 years' service, or at the age of 65, after 25 years' service.

b. If after 25 years' service they have become unable to continue serving through infirmity.

If, however, infirmities have been contracted in consequence of the discharge of their duties, they may retire, whatever their age or length of service.

An average is taken of the different salaries received by the officer during his term of service, without counting extra allowance for office work, frais de représentation, or residence; a deduction is then made from this average, which in some cases amounts to one-fifth, and in others to one-third, and the pension is calculated on this latter sum.

If the average is not higher than fcs. 2,000, the pension amounts to one-fortieth for each year of service, and if higher to one-fortieth of the first 2,000 fcs., and one sixtieth of the remaining sum. But an official having 40 years' service enjoys four-fifths of the average as calculated above.

In certain cases a lump sum is paid in addition, amounting to one-twelfth of the last salary received, for each year of service, if that salary only amounted to 2,000 fcs., and one-eighteenth of the remaining sum if the salary was higher.

The widow of an official is granted one-third of the pension which her husband received, or would have received if he had lived; but if he died in consequence of the discharge of his duties, his widow has a right to one-half of his pension.

Sons under age and unmarried daughters, if their mother is dead, inherit her rights.

Russia.

The general regulations with regard to Civil Service pensions in Russia are not applied to the diplomatic service abroad.

Pensions to diplomatic officers are granted by the Emperor, special application being submitted to H.I.M. whose decision is taken in each case.

REPORT

FROM THE

SELECT COMMITTEE

ON THE

SUPERANNUATION ACTS AMENDMENT (No. 2) BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed,*
14 *June* 1892.

MINUTES OF EVIDENCE - - - - - - - - - - p. 1

REPORT.

THE SELECT COMMITTEE on the SUPERANNUATION ACTS AMENDMENT (No. 2) BILL, have considered the said Bill, and taken Evidence thereon, which they have agreed to Report to the House; and have gone through the Bill, and made Amendments thereunto.

13*th June* 1892.

PROCEEDINGS OF THE COMMITTEE.

Thursday, 2nd June 1892.

MEMBERS PRESENT:

Mr. King.	Mr. Craig.
Mr. Storey.	Mr, Jackson.
Sir Richard Temple.	Mr. Hunter.

Motion made, and Question proposed, That Sir MATTHEW WHITE RIDLEY be the Chairman of the Committee,—put, and *agreed to.*

In the absence of Sir MATTHEW WHITE RIDLEY, Mr. STOREY took the Chair.

[Adjourned till Tuesday, 14th June.

Tuesday, 14th June 1892.

MEMBERS PRESENT:

Sir John Gorst.	Mr. Jackson.
Mr. Biddulph.	Mr. John Ellis.
Mr. Craig.	Mr. King.
Sir Richard Temple.	Mr. Hunter.
Mr. Storey.	

In the absence of Sir MATTHEW WHITE RIDLEY, Sir JOHN GORST took the Chair.

Mr. *Frank Mowatt* and Mr. *Henry Waterfield* were examined.

The Committee proceeded with the consideration of the Bill.

Clause 1.—Amendment proposed, in page 1, line 5, to leave out the words "after the passing of the Act," in order to insert the words "the first day of January 1893"—(Mr. *Storey*).—Question proposed, "That the words proposed to be left out stand part of the Clause."—Amendment, by leave, withdrawn.

Another Amendment proposed, in page 1, line 7, after the word "persons" to insert the words "belonging to classes set out in the Schedule to this Act"—(Mr. *Storey*).—Question put, "That those words be there inserted."—The Committee divided:

Ayes, 4.	Noes, 4.
Mr. Craig.	Mr. Biddulph.
Mr. John Ellis.	Mr. Jackson.
Mr. Hunter.	Mr. King.
Mr. Storey.	Sir Richard Temple.

Whereupon the *Chairman* declared himself with the Noes.

An Amendment made.

Another Amendment proposed, in page 1, line 14, after the word "gratuity" to insert the words "to be calculated on the average salary of the last five years of service"—(Mr. *Storey*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 4.	Noes, 4.
Mr. Craig.	Mr. Biddulph.
Mr. John Ellis.	Mr. Jackson.
Mr. Hunter.	Mr. King.
Mr. Storey.	Sir Richard Temple.

Whereupon the *Chairman* declared himself with the Noes.

Clause, as amended, *agreed to.*

Clause 2.

Clause 2.—Amendment proposed, in page 2, line 9, to leave out Sub-section 2—(Sir *John Gorst*).—Question, That the words proposed to be left out stand part of the Clause,—put, and *negatived.*

Clause, as amended, *agreed to.*

Clause 3.—Amendment proposed, in page 2, line 12, to leave out the words "that of a commissioned, warrant, or other officer," in order to insert the words "any office or employment" —(Sir *John Gorst.*—Question, That the words proposed to be left out stand part of the Clause, —put, and *negatived.*

Question, That the words "any office or employment" be there inserted,—put, and *agreed to.*

Another Amendment proposed, in page 2, line 21, to leave out the word "either"—(Mr. *Storey*).—Question, That the word "either" stand part of the Clause"—put, and *negatived.*

Another Amendment made.

Clause, as amended, *agreed to.*

Clauses 4—5, *agreed to.*

New Clause.—(Rules to be laid before Parliament) — (Sir *John Gorst*) — brought up, read the first and second time, and added to the Bill.

Ordered, To Report the Bill, as amended, to the House, together with the Minutes of Evidence.

LIST OF WITNESSES.

Tuesday, 14*th June* 1892.

MINUTES OF EVIDENCE

Tuesday, 14th June 1892.

MEMBERS PRESENT:

Mr. Biddulph.	Mr. King.
Mr. Craig.	Mr. Jackson.
Mr. John Ellis.	Sir Richard Temple.
Sir John Gorst.	Mr. Storey.
Mr. Hunter.	

THE RIGHT HONOURABLE SIR JOHN GORST, IN THE CHAIR.

Mr. FRANCIS MOWATT, C.B., called in; and Examined.

Chairman.

1. WOULD you tell the Committee what your official position is?—I am the head of the Division of the Treasury in which the pensions are awarded.

2. I believe the 12th section of the Superannuation Act of 1859 declares it to be for the public advantage that officers holding posts pensionable under that Act should be eligible for other public employments which are not pensionable, without losing their claim to retired allowances?—Yes.

3. And it provides that the transferred officer on his retirement shall be qualified for a pension on his entire service?—Yes.

4. Has that provision of the Superannuation Act been extended by subsequent Acts to other pensionable service?—Yes, I believe every Act of Parliament which has dealt with the pension rights of any particular branch of the service has always extended the provisions of that section, which you have quoted, to the service dealt with.

5. Among other offices, is it extended to the Governorship of a colony?—Yes.

6. By the 28th and 29th Victoria, chapter 113?—Yes.

7. Is it also extended to the permanent Civil Service of a colony?—Yes.

8. Is that by the 50 and 51 Victoria, chapter 13?—Yes.

9. Is it also extended to the Diplomatic Service?—Yes.

10. By the 32nd and 33rd Victoria, chapter 43?—Yes.

11. And also to the permanent Civil Service of the Isle of Man?—Yes.

Chairman—continued.

12. By the 39th and 40th Victoria, chapter 43?—Yes.

13. And also to the Home Department of the Secretary of State for India?—Yes.

14. That means Indian officers in England?—Yes.

15. By the 23rd and 24th Victoria, chapter 89?—Yes.

16. Is it also extended to the police of England by the 53rd and 54th Victoria, chapter 45?—Yes.

17. Notwithstanding those extensions, do there still remain pensionable branches of service in which transfer from one to the other or between any one of them and a service pensionable under the Act of 1859 forfeits the claim of the officer transferred to pension in virtue of his former office?—Yes.

18. Will you enumerate those services?—There are the Royal Irish Constabulary and the Dublin Metropolitan Police; the Prisons Service as regards persons appointed before the year 1878.

19. 1878 was the year when the prisons were transferred to the Secretary of State?—Yes. County court judges in England and Ireland, sheriffs and sheriff substitutes in Scotland, and the Pensionable Civil Service in India.

20. The Pensionable Civil Service in India includes both what is called the covenanted and the uncovenanted, does it not?—Yes.

21. All the offices in India in which service is entitled to pension?—Yes.

22. Now, does the Superannuation Act of 1859 define the persons who are qualified for pension

Chairman—continued.

pension under its provisions?—Yes, by the 17th section.

23. Will you state what the definition given in that Act is?—They must first hold appointments directly from the Crown, or have been admitted into the service with Civil Service certificates; and, secondly, be paid by salaries or remuneration provided out of the Consolidated Fund, or out of money voted by Parliament.

24. Do any of the branches of service which you have enumerated require the possession of a Civil Service certificate as a condition of appointment?—No.

25. Were prison officers appointed before 1878 paid from local, as distinguished from Imperial funds?—Yes.

26. In consequence of those facts, does the definition of the Superannuation Act exclude the officers of those services from the benefits of its provisions?—Yes, so far as regards their service before they were transferred.

27. The Statutes which regulate the rights of the officers to pensions in those enumerated services, make the pension conditional on a certain length of service, or on the officer being compelled to retire from mental or bodily infirmity?—Yes.

28. Does it follow from that, that the officer who is transferred before he has served the necessary time, or when he is still in full health and vigour, loses his claim to pension?—Yes.

29. When was this difficulty of giving pensions first found out?—In 1883.

30. Was it then thought to be covered by the discretionary power of the Treasury?—That was the view of the Treasury.

31. Under what section did they think they had a discretionary power?—Under the 2nd section of the Act of 1859; that section fixes the rate of the superannuation allowance, and there is a proviso attached: "Provided always, that if any question should arise in any department of the public service as to the claim of any person or class of persons for superannuation under this clause, it shall be referred to the Commissioners of the Treasury, whose decision shall be final."

32. Did it appear to the officers of the Treasury upon mature consideration that this discretion could be exercised only within the provisions of this Act?—Yes.

33. So that it could not be exercised in such a way as to give any pension at all to a person not qualified within the provisions of the Act?—Yes, we felt a doubt about it.

34. Therefore you could not award pensions to the persons whose service you have enumerated?—No.

Mr. *John Ellis.*

35. What was the date when the new interpretation was arrived at?—It was in 1887, I think. At that time a Superannuation Bill was introduced, and the Treasury undertook, as a condition of obtaining that Bill, to exercise all discretion within the narrowest possible limits; to be guided as far as they could by the actual words of the Act of Parliament concerned.

Chairman.

36. Are the transfers to which this Act would apply common?—They are rare.

37. Why then does this question at the present time assume a practical importance which you did not attach to it formerly?—The Order in Council of 1890 made compulsory the retirement of all Civil Servants at the age of 65, and that was followed either by the retirement, or by the immediate prospect of retirement of a large number of officers, who drew attention to their position; therefore we became aware that there were men who would be affected by that which we considered an oversight in the drafting of these Superannuation Bills, few of whom have come up as yet, but several of whom will come up in the next few years.

38. What is the object then of the present Bill?—That those officers may obtain the benefit of their full service on retirement.

39. Have you the means of ascertaining every case in which an officer now serving has been transferred to or from one of the services you have enumerated?—No, we could not give an exhaustive list of them.

40. But you could, I presume, give a list of every transfer which you have been able to discover, without pretending that your list is exhaustive?—Yes, except as regards subordinate posts; for instance, a postman or a prison warder, it would not be known in his department that he had been transferred, until on coming to retire he sends in his own particulars of service, and he would then draw the attention of the head of his department to the fact that he had been transferred from another branch to that.

Mr. *Craig.*

41. How does the case of a postman arise under those circumstances?—The postman might have been either a constable in the Dublin Metropolitan Police, or he might have been a prison warder, and then have become a postman; the Post Office would not know until he came up for pension of his transfer.

Mr. *John Ellis.*

42. Is it not necessary to make clear to the Committee that the transfer should be direct?—Yes.

43. And that there should be no break?—Yes, there must be no break. I wrote to all the departments which I thought might be affected by it and I have got their answers. From the Royal Irish Constabulary and the Dublin Metropolitan Police 24 gentlemen are now serving as resident magistrates; they are all affected, but some of them very slightly, because a resident magistrate is entitled to an addition of years in the calculation of his pension on the ground of its being a professional office; that is an addition which is given by Section 4 of the Superannuation Act of 1859. In the case of resident magistrates the addition is 10 years; therefore 10 years has to be deducted from the previous constabulary service in order to show the actual loss of service. I will take a particular case. A gentleman of the name of Cronin served for 11 years in the Royal Irish Constabulary; he was appointed a resident magistrate and

Mr. *John Ellis*—continued.

and has had an addition of 10 years, consequently his total loss of service was only one year.

Chairman.

44. He would only be affected by the present Bill to the extent of that year; he would get one year's more service than under the existing laws?—Yes. The next case illustrates the extreme hardship of the rule. Mr. R. G. Bull served for 24 years in the Royal Irish Constabulary. He was appointed in 1892 to be a resident magistrate, and since 1890 the grant of additional years has been suspended; that is to say, the operation of that section to which I have referred the Committee. Consequently he loses the whole of his 24 years' service, and is at the present time not entitled to a pension at all; and if within the next 10 years he were to break down from ill-health, he would have lost his claim to pension for his entire service.

Sir *Richard Temple.*

45. Did he know that when he took the post?—No.

Chairman.

46. Will you now go on with your enumeration?—Perhaps I need hardly follow the particulars of these 24 cases.

47. Are the whole of the 24 affected in some degree?—Yes, in some degree.

48. Those are all Royal Irish Constabulary or Dublin Metropolitan Police constables who have been affected?—Yes.

Mr. *John Ellis.*

49. Does that list extend over a considerable period between the first appointment and the last?—Yes, the first appointment is 1866 and the last appointment in this year. Perhaps I may explain to the Committee that it is only during those years, the last 20 years I think, that appointments have been made from the Royal Irish Constabulary or the Dublin Metropolitan Police to resident magistrates, and that is why a larger number now show than we were aware of at the Treasury. Previously to that time they had been appointed always from outside I think.

Chairman.

50. At what salary?—£. 450 to begin with, I think, and a maximum of 800 *l.*

51. Now take the next class?—In the next class, also from the Royal Irish Constabulary and the Dublin Metropolitan Police, 21 men have been transferred to the Colonial police forces; that is to say they have been constables chiefly in consular establishments and embassies in the Colonies.

52. That is to say Colonial police forces paid out of Imperial funds?—Yes, and three have been transferred to be messengers in the Civil Service. The next class is from the local prisons appointed before 1878; there were convict prisons and local prisons. Before 1878 the convict prisons were State prisons; the local prisons were prisons managed by the counties and paid by them. Under the Prisons Act of that year they were all transferred to the State. From that local prison staff appointed before 1878,

Chairman —continued.

there have been appointed to the Prisons Department of the Home Office six men; to the Convict Prison staff six men; to the Colonial prisons three. Between the permanent Civil Service and Pensionable Service of India, I can trace nine.

Mr. *Storey.*

53. You have missed the county court judges?—There is not an actual case of a county court judge, but there is a possibility that there might be a transfer from one service to the other.

Chairman.

54. But you know of none?—No, but there is one case of a sheriffs substitute transferred to the permanent Civil Service.

55. There are some one way and some the other; some from and some to?—Yes.

56. Could you give the Committee the numbers?—No, but they would be about an equal number each way.

57. Are you able to say that the list you have given the Committee exhausts all the cases except those of subordinate officers of the Prisons Service and Revenue Departments, whose transfers would not transpire until they were leaving the service?—I would rather add a possibility which I have just discovered. Among the officers retired under the Order in Council of last year is Captain Graham, late secretary to the Scottish Fishery Board; I find that he had some previous service paid out of the Mercantile Marine Fund; the Mercantile Marine Fund would fall within the definition which is given in Clause 3 of the Bill, that public offices within the meaning of this Act are offices paid out of "any fund, which either from its being administered by a public department or from its receiving a contribution from any of the above services," that is to say, the Consolidated Fund or the votes of Parliament, "the Treasury may determine to be a public fund." I believe the Treasury contemplates determining that the Mercantile Marine Fund is a public fund for the purpose of this Act.

58. Can you form any estimate of the number of persons in the subordinate branches of the Prisons and Revenue Service who might be added to your list; what is your idea?—I am afraid it must be rather more of a guess than an estimate; but looking back for many years through our returns, I should think that possibly there might be in all the services taken together, fifty subordinates.

59. To be added to the previous list?—Yes.

60. Adding the fifty, have you now given the Committee as exhaustive a list as you can of the persons who would be affected by the passing of this Bill?—I think so.

61. Have you formed any estimate or any guess as to the charge upon the public revenues which the operation of this Bill might, at its greatest, impose?—I said when I first looked into it that it might amount to 2,000 *l.* a year, but I think I have over-estimated it; I doubt if it will rise to more than about 1,200 *l.* or 1,500 *l.* a year.

62. Take

Mr. *Storey.*

62. Take the case of Mr. Bull as an illustration; under the Bill, as it is drawn, would he be able to retire, and when and at what pension?—He will be enabled to retire when he attains the age of 60: he must retire at the age of 65, or he could retire if he were broken down in health at any time on a medical certificate, that he was unable to perform the duties of his office.

63. Would he get full pension on his last salary under the Bill?—Not the full amount possible for long service; he has served 24 years altogether; he would not be entitled to any addition; he would therefore retire with 24-sixtieths of his salary.

Mr. *Jackson.*

64. He would go in at the bottom, if he were the last appointment?—Then he would get 24-sixtieths of 400 *l.*; that would be 180 *l.* a year.

65. Whereas he would have got considerably more under the old system?—Yes.

66. What is his salary under the constabulary?—I cannot tell you.

Mr. *John Ellis.*] Four hundred and twenty-five pounds a year when appointed, and he has 425 *l.* now.

Mr. *Jackson.*

67. Is the pension of the Civil Service the same as of the constabulary?—No, it is lower. As a constabulary officer if he had served 24 years and retired, he would have been entitled to 24-fiftieths; as a civil servant he will now retire on 24-sixtieths.

Mr. *Storey.*

68. And the whole of the 24 resident magistrates, who came from the constabulary; as the law now stands, can they get any pension?—Yes, the pension of their service as resident magistrates, but not that for their constabulary service.

Mr. *Jackson.*

69. Mr. Cronin will gain the advantage of one year under the Bill?—He would gain an advantage; but again if he had remained in the constabulary his entire service, he would have had a much higher rate of pension.

Mr. *Storey.*

70. I will only ask you this one other question: these being the gentlemen who are now concerned, have you formed any estimate of what would be the probable future charges, because the Bill will be not only operative now, but as to future appointments; would there be a large number of persons who might be affected?—Who might be hereafter transferred? I should say not more than at present, certainly. I have founded that opinion upon this: that we have never known until quite recently that there was a hitch, therefore, you might take it that there was no stoppage in transfer for fear of this loss, that all who would have been transferred were transferred.

Chairman.

71. The Bill as it is drawn makes the pension calculable upon the salary at the time an officer leaves the service; is that the universal practice throughout the Civil Service?—The universal practice; I believe in every pension Act that is so.

Chairman—continued.

Mr. *Storey.*

72. But is not that in opposition to the recommendation of the Commission?—Yes, but the recommendation of the Commission was not intended, I understood it, to affect existing rights.

73. But these are not existing?—If you amend that rule for the service generally by subsequent legislation it will affect this Bill as well as all previous legislation.

74. The point I am putting is this: The Commissioners having recommended an improved method of calculating pensions, you are nevertheless asking us in this Bill to continue and extend the old system which they condemn?—Not to extend it, I think.

75. To extend it to these gentlemen?—These gentlemen are existing officers.

76. But they are not entitled to the pension which you are now proposing to give them?—No.

77. Then you are going to ask us now to adopt the existing method which the Commission condemn?—Yes.

Sir *Richard Temple.*

78. With reference to these pensionable Civil servants in India, how does this Bill apply to them; my reason for asking is this: that all these gentlemen must already have pensions from the Indian Revenue; how do they come upon the English Revenue for pensions?—Might I give you a concrete case, perhaps, as explaining it. Mr. Rule served for eleven years under the Accountant General of the Navy, and was in 1865 appointed to the Financial Department in India, and he retired in 1871 after a total service of 36 years, and was awarded a pension; the Treasury said they were unable to contribute towards it in respect of those years he had served in the Civil Service for want of the legal power. Under this Bill we should contribute towards that gentleman's pension the proportion applicable to the years he had served in the permanent Civil Service of this country, before the joined the Indian service; it would be in relief of the Indian Exchequer in his case.

79. Can you give the Committee another concrete example of a transfer from India to England?—Sir Gerald FitzGerald, after serving in the War Office in this country for eight years, was transferred to the Financial Department of India in 1863; he was then retransferred to the British service as Accountant General of the Navy in 1885, and it has never yet been settled how his pension is to be divided. The effect of this Bill will be, if it becomes law, that India will contribute part of his pension in respect of his service in India, and the Exchequer here will contribute part of his pension in respect of his service here. The existing rules which have been adopted until, as I say, we discovered that our practice was not as we thought legal, were these: "Officers pensioned by the Admiralty with Indian Service" (this was the Admiralty rule, but it applies generally), "India shall pay as many sixtieths of salary on final retirement as the number of years' service under the Indian Government; the Admiralty shall pay

Sir *Richard Temple*—continued.

pay the rest. Officers pensioned by India with Admiralty service, Admiralty shall pay as many sixtieths of salary at date of transfer to India, as the number of years' service under the Admiralty, India shall pay the rest."

80. But in both those cases the operation is quite fair, is it not, as between India and England?—It is quite fair, but it is illegal; and this Bill is an attempt to make legal what two departments have always carried out under the impression that it was legal.

81. But in both those cases the pension would be based upon the salary they were obtaining in England at the time of their retirement?—Yes.

Chairman.

82. No; Mr. Rule retired in India?—Yes; he retired in India.

Sir *Richard Temple.*

83. Is his pension based upon his salary at the date of his retirement in India?—Yes.

84. And *vice versâ* Sir Gerald FitzGerald's pension will be based upon the salary he is now receiving at the Admiralty, if he retired?—Yes.

85. And that seems fair in both cases?—At all events it is the universal rule as regards all pension services.

86. Do you think it is fair upon the whole?—Yes.

87. It must be so, so long as the principle is adopted of the pension being based upon the salary at the date of the retirement?—Yes.

88. Does a case ever arise in this way, that an officer who is already drawing a pension from the Indian revenue comes to England and is employed in England, and serves for a considerable time in England, and then retires drawing an English salary?—Yes.

89. Would he get any pension then from the English revenues?—Yes; in respect of his number of years' service in England.

90. But that pension would be based upon the salary he was drawing in England at the time of his retirement?—Yes.

91. If that salary happened to be a high one and he had served but a comparatively short period, say 10 or 15 years, would not that be a high pension?—It would be a small pension on account of his short service. Our English pension is 1-60th of the salary for each year of English service; if he came to England and served here 10 years, he would only get 10-60ths of his English salary.

92. That would not be unduly burdening the English revenue?—No, I think it would be fair.

93. My reason for asking the question is, that a gentleman, a Member of this House, who had been in India, but unconnected with the service, gives it as his view that this Bill would give some extraordinary and undue advantage to a gentleman who had served in India, and drew a pension from the Indian revenue, was as much as he would obtain additional pension apparently from the English revenue; is there such a case?—There cannot be such a case. If a man has already earned his pension in India, he is also entitled to the pension I have described to you if he joined our service in England. The only case this Bill would touch would be that of a

Sir *Richard Temple*—continued.

man transferred from India before he had earned or got his pension, and then joining the English service; he would, on retirement, be entitled to count his whole service in India and in England as I have described.

94. Only I understand in that case India would be debited with her fair proportion of the pension?—Yes.

95. So that arrangements would be quite equitable in your opinion?—It would in my opinion.

96. Can you conceive any case in which an officer so situated would draw more than he was fairly entitled to by this double arrangement?—No; because if we thought such a case possible, we should deal with it under the powers given by this Bill to make rules to meet it. I do not see how it could arise; but the Treasury take power to make rules in order to prevent a possible abuse of the provisions of the Act.

97. For instance, he would have served for a short time in England?—Yes.

98. And a long time in India?—Yes.

99. And his pension will be reckoned upon the whole period?—Yes.

100. His pension would be reckoned for the whole period on he English scale?—Yes.

101. But then India would be debited with her full proportion?—Yes.

102. Do you consider that India would have any cause of complaint of that?—I think not.

103. On the contrary, would it not be more likely that the English salary would be rather less than the Indian salaries?—I have no doubt that the whole operation of the Bill will be in favour of England; that is to say, that we should get the service more cheaply and pay less of the pension than India.

104. And rather against the officer serving foreign, because probably his ultimate salary in England would be rather less than his ultimate salary in India?—Yes, I should think so.

105. Because the English salaries are rather less than the Indian salaries?—Yes; and also our scale of pensions is not so good as that in India.

106. So you believe that this Bill is not framed to offer any peculiar or undue advantage to gentlemen who come from India?—I feel confident of it.

107. Am I right in my recollection that the main question in this Bill was in some way started in the Public Accounts Committee?—Yes, in 1883. I am not speaking now about India, but that was the first inception of it.

108. Was it not started in the Public Accounts Committee some time since 1887?—Not the particular point dealt with by this Bill. I think it was when we asked for the Superannuation Act of 1887 that the Treasury, as a condition of obtaining some additional powers under the Bill, undertook to exercise any discretion which they had previously exercised somewhat largely, within the strictest and narrowest lines; and we instance cases in which we no longer proposed to exercise that discretion.

109. Was not that at the instance in some way of the Public Accounts Committee?—Yes.

110. Am I right in my recollection that the Public Accounts Committee agreed to accept

certain

Sir *Richard Temple*—continued.

certain pension rulings made by the Treasury on condition of the Treasury undertaking to bring some Bill upon the subject before Parliament?—Yes.

111. And this is the Bill in consequence?—This is the remainder of the Bill. In the Bill which we brought in in 1887 we had not really struck this blot; we then held that our discretion fairly covered that cases. I think I may still say the Treasury could make a good defence for using its discretion; but the Treasury have thought that its discretion ought to be beyond question, and therefore that we would fortify ourselves by further legislation.

112. Just tell me shortly what was the purpose of the Bill of 1887; was that also to remedy certain "defects and doubts," as you call them?—Yes, it was to regulate the grants to civil servants injured in the execution of their duty in the service. The old Superannuation Act of 1859 gave no power to give increased rates of pension to men injured in the execution of their duty, particularly in the dockyards; that was the first thing. The next thing was to provide against a man earning two pensions at the same time. We found that men might hold, or up to that time had held, commissions in the army or navy which entitled them to pension or increased half-pay rather, and served in the Civil Service, and claim pension in regard to that at the same time, and therefore that Bill provided that a man could not draw any pension in regard to Civil Service if he was at the same time earning half-pay as a secunded officer.

113. Might not that point of the same gentleman earning two pensions apply to the cases you have mentioned from India; that is to say, might it not be said that a man was earning one pension from the Indian revenues and one pension from the English revenues?—Not from concurrent service; he might have earned a pension in India, and with that pension he might have come over to England and earned a pension with reference to his English service, but not twice over for the same period of service.

114. You say if he has fairly earned a pension by service in two countries, he is entitled to pension from both?—Yes, if they were earned in respect of different periods of service.

115. If he has earned a pension for two periods of service, he is entitled to pension for both?—Yes, certainly. As regards pension for service in India, it is, I believe, paid for by the officer himself in the form of contributions from his salary.

116. At least, in part paid for?—Yes, in part paid for.

Mr. *Biddulph.*

117. The sole object of this Bill is to remedy a defect in the law?—Yes.

118. A pension granted to a man whose service has been performed partly in India is paid for partly from the Treasury and partly from the India Office, according to the number of years he may have served in those two countries?—Yes.

Mr. *Craig.*

119. Would this Bill cover the case of uncovenanted servants in the Indian service?—I believe so.

120. Is it not the fact that by the Indian regulations the maximum amount of pension allowed to uncovenanted servants is, at 55 years, 5,000 rupees?—I cannot tell you; Mr. Waterfield will tell you as regards the Indian pensions.

121. But you are quite clear that this Bill would cover the uncovenanted service of India, as well as the covenanted?—Yes.

122. You are not aware that the regulations applying to the uncovenanted service differ very much from those applying to the other service?—I am aware of it generally.

123. Do not you believe that the Bill would operate unfairly to the British taxpayer?—I think not.

124. By the rule contemplated by the new Act an Indian uncovenanted civil servant taking up an English appointment after, say 50 years of age (being then entitled to 350 *l.* per annum pension Indian), in value 1,500 *l.* per annum, and holding that appointment for five years would be entitled to count for pension, not his Indian service on the minor scale, but his Indian and English service as if he had been his entire service in his English appointment, and take a pension of 1,000 *l.* per annum instead of 350 *l.* Indian pension, plus the sum he would be entitled to at the present rate, viz.: 5-60ths of 1,500*l.*, 125 *l.*, making a total of 475 *l.* per annum, as against 1,000 *l.*; do you think that that is a fair thing to the English taxpayer, assuming it is true. I do not know whether it is or not?—If you look at Sub-clause 3 of Clause 1 of the Bill you will see that although the Treasury may apportion the amount to be paid out of each fund or account; and might therefore apportion to India her full share of the pension, the Secretary of State in Council for India is to determine the amount to be paid therefrom. We apportion to India her share of this pension on the assumption that the officer was entitled to the same scale of pension throughout. The Secretary of State for India then determines the amount to be paid from the Indian Fund; he would determine in the case you mention that the man should be paid only so much as he would have been entitled to under these uncovenanted rulings; the result is that the man would not get his full rate of pension.

Mr. *Storey.*

125. Suppose a pension was granted him to the amount of 600 *l.* a year, and you apportioned at the Treasury 400 *l.* from England and 200 *l.* from India; do you mean to say the Secretary of State for India might say, you may apportion 200 *l.* but I will only pay 100 *l.*, although you had said this gentleman was entitled to 600 *l.* a year?—No, we should not say "entitled."

126. You would say 600 *l.* is your fair pension?—We should say, you are qualified for pension calculated upon this scale, subject to the discretion expressly reserved to the Secretary for India.

Mr. *Craig.*

127. By Sub-section 2 of Clause 1, as I read it, a man who had served a number of years in the uncovenanted service of India, comes over here

Mr. *Craig*—continued.

here and gets a civil appointment of five years with, in the case I put, 1,500 *l.* a year. The rules say that both the time in India and in England shall count for pension and that the pension shall be counted as if his whole service had been in the office in which he ultimately retires; would that operate in this way?—No, because although the pension would be apportioned on that principle, the actual payment of the Indian share is at the discretion of the Secretary of State for India; he would determine how much of the sum apportionedto India he would pay.

Mr. *King.*

128. Do you mean that supposing he had served 30 years in India, which would be his service for the uncovenanted pension and five years here (which would make 35-60ths to which he would be entitled), you would apportion 30-60ths to India and 5-60ths to England?—Yes.

129. But the Secretary of State might say, I shall only pay for our 30-60ths 5,000 rupees, and therefore his total pension would only be 5,000 rupees, *plus* 5-60ths of the salary he is drawing in the last service?—Yes.

Chairman.

130. But under the present law, he would not get 5-60ths, because he would not have served long enough in the English service to get a pension at all?—No, but under this Bill the whole service will count as one.

Sir *Richard Temple.*

131. But taking the service at 40 years, your answer would be exactly applicable?—Yes.

Mr. *Craig.*

132. Going back to the original question I put to you is that a correct statement of the effect of this Bill if passed into law, or not?—No, I do not think that would be the effect of the Bill; he might be qualified for that amount of pension, but he would not get it.

133. Then what is the meaning of Sub-section 2 of Clause 1 of this Bill?—It is that the Treasury should calculate pension upon the lines laid down in that section; and it would pay its own proportion of that pension, but it cannot compel the Secretary of State for India to pay, because "The Secretary of State in Council of India shall determine" the amount payable from the Indian Fund. Therefore, as regards the English service the man would get the pension to which he was entitled as regards the English service, and as regards the Indian service the Secretary of State for India would determine the amount to be paid from the Indian Revenue, and he would, I assume, determine that that amount should depend upon whether the man had been in the uncovenanted or the covenanted service of India.

134. But would not Sub-section 2 of Clause 1 determine the amount to which such a civil servant in England was entitled?—Yes. As regards his English service absolutely, but as regards his Indian service, only subject to the determination of the Secretary for India.

135. The section says the Rules shall provide for a certain thing, and the service shall be reckoned in such and such a way?—Yes.

Mr. *Craig*—continued.

136. And that he shall have a pension as from the office from which he last retires, as though all his time had been served in that office. Supposing you take 10 years, would not those 10 years be added on to the 30?—It would not affect it.

Mr. *Storey.*

137. If a man has served in India 30 years, and then serves 10 here, under the Bill he would get exactly the same pension as if there had been no Bill; that is to say, he will be entitled to his 10-60ths here, and to his 30-60ths in India?—At present if he had served 30 years in India (you are speaking of the uncovenanted service) he would have received his pension and retired; he would keep that pension for the rest of his life; he would come over here and would get 10-60ths if he served 10 years of his English service, but he would get no addition at all in respect of his previous service, he would have got his pension before he came over here.

138. Make it 28 and 12; for 28 years in India he would not have got a pension?—I thought it was after 20 years he got his pension in India.

Mr. *Craig.*

139. Are you quite clear that these last words in Sub-section 2 of Clause 1 will not entitle such a man to count his Indian time and English time together for pension after retiring from the English office?—It would throw no additional charge on the English pension, and it would be at the discretion of the Secretary of State in Council of India whether it will throw an additional charge upon the Indian Funds or not.

Mr. *King.*

140. Supposing this gentleman, whom Mr. Craig has been speaking of, retired from the Indian service, he would draw the value of the office concurrently with his new office?—Yes.

141. So that he would be drawing 5,000 rupees plus 1,500 *l.* a year?—Yes.

142. Then when the pension comes to be assessed at the end of 10 years' service on the basis of 1,500 *l.* he will be entitled to count 40-60ths?—No; if he drew his Indian pension during his English service, then he could not count his Indian service towards his pension at all.

143. But he would in all cases where he had pension be drawing it?—Yes.

144. I will take you to the case of a resident magistrate, Mr. R. C. Evanson, served for a very considerable time in India?—Yes.

145. And is now drawing a pension from the Indian Government?—Yes.

146. Concurrently with his pay as a resident magistrate?—Yes.

147. And when he retires how will his pension be calculated?—Solely on his services as a resident magistrate.

148. He will not be allowed to count the years of his service in India at all?—No.

149. Then this Bill does not affect him at all?—No.

Mr. *John Ellis.*

150. Just one further question about the history of this matter; do I gather from you that it was in 1883 that the Auditor General discovered what

Mr. *John Ellis*—continued.

what you have called a technical flaw?—Yes, in 1883.

151. Then in 1887 a certain change of interpretation took place; was not that so?—Yes.

152. The Treasury took a narrower view, did it?—Yes.

153. Then for four years there was no difficulty at all events?—From 1883 to 1887 there were no difficulties.

154. Then when the narrower interpretation took place in 1887, what happened until 1890?—No case arose.

155. In 1890 there was this Order in Council which, I take it from you, has raised the difficulty?—Which has brought it into prominence.

156. In consequence of the compulsory retirement at certain ages?—Yes.

157. Then I think we gathered from you that there must be a continuous service?—Yes.

158. Do you find that in the Bill; under what words is it specified?—The Parliamentary counsel are of opinion that "successively" did that; "who have served successively in two or more offices" in line 3, Clause 1.

159. You have been advised that the word "successively" means continuously?—Yes, but I may say that the Government have raised no objection to the insertion of any words explaining it, if thought necessary.

160. You have given the Committee the number of persons who will be affected under this Bill, but you used the expression, "I have just discovered a case"; do you think it is at all possible that other cases may be discovered?—It is possible.

161. But not probable you think?—I should think it is not probable.

162. At all events you now wish us to assume with reasonable certainty that the 69 and the 50 cover all the cases?—Yes; I have made every inquiry in my power, and I am confident that 120 men will cover the whole number in the service.

163. As a public man in the service you come before the Committee to say that it is the result of your research?—Yes.

164. It would be very unfortunate I need hardly point out, for your reputation, if a number more were discovered after a few years time?—My answer, of course, is subject to such information as I have been able to derive from the different Departments. The Treasury cannot possibly know of these cases until they come up for pensions; but I have communicated with all the Departments which I thought could possibly be affected by it, and I have taken from the letters I have received from them the information I have laid before the Committee.

165. You were requested by your superior officer to appear before the Committee and give the Committee the figures?—I was requested by my superior officers to give the Committee every information in my power; and that was all the information I could get.

166. These are really figures put before us by the Government of the day?—I am rather in the hands of the Committee in answering that question. I had instructions to find out everything I possibly could; I have made the fullest inquiries among the Departments, and that is the result.

Mr. *John Ellis*—continued.

167. Then with reference to the cost; have your inquiries satisfied you that the cost you have given the Committee is the outside cost?—Yes, they have satisfied me as to that.

168. Have you had any complaints of the grievances that this Bill is supposed to remedy?—Yes.

169. How many?—I think the total number of cases would be about a dozen.

170. You have had complaints from these gentlemen?—We have.

171. Written complaints?—Yes; they have pointed out to the heads of their department the fact that when their retirement comes, they now find that from the Treasury ruling they lose a part of their pension. I can give you a particular instance; a gentleman the other day, a sheriff substitute——

172. That was the case mentioned by Mr. Balfour in the House?—Yes, there was such a case.

173. Have you any other?—Yes; there is a gentleman in the Prisons' service who was appointed, from being a governor of a prison to be an inspector of prisons, but it was found that the terms of the Prison's Act had not contemplated such a transfer, and that he would lose the whole of his previous service pension.

174. Did these gentlemen mention that when they entered into the service they did so under what turns out to be a misapprehension?—Yes, in each case.

175. Was it that, or was it that the new interpretation of the Treasury, created a new state of things?—Both are true; they could not foresee that the Treasury would restrict its discretion; the Treasury had habitually granted pensions to men in the same position, therefore they had no means of knowing that when their turn to pension came, a different ruling would be adopted in their case.

176. Will you explain to the Committee why the grievance was not brought before the Commission when it sat?—It was really hardly recognised; it occurs so very rarely.

177. Have these dozen complaints occurred since then?—Yes.

178. What are the earliest of these dozen complaints?—I think 1889 was the earliest.

179. Was not the Commission sitting in 1889?—No, I think not.

180. The Commission was appointed in 1887, I think?—I think it had reported before 1889.

181. At all events this grievance had not assumed such dimensions during the time the Commission was sitting that you thought it necessary to raise the point before it?—No.

182. It is quite a recent case?—Yes; it is quite a recent case.

183. Perhaps you cannot explain to the Committee why the Bill was not introduced before?—It has been introduced; there have been a series of Superannuation Bills introduced since the Report of the Commission every year, and a clause doing what this Bill now does, has been in every one of those Bills.

184. I think we gather from that there are 24 of those resident magistrates affected?—Yes.

185. There are 72 of them altogether, I think; can you tell the Committee what the additional cost

Mr. *John Ellis*—continued.

cost will be in their case?—I could work it out for the Committee, but I have not got it.

186. Would it be an appreciable part of the total?—Yes.

187. Would it be one-third of the total?—Yes, I should say it would be quite a third.

188. Would it be nearly half?—I should not like to say unless I had worked it out.

189. At all events I may take it from you, that of the expense which the remedying of the grievance which this Bill is about to do, would cast upon the public, more than a third arises from the resident magistrates of Ireland?—I should say a third.

Mr. *Jackson.*

190. Just upon that point; the grievance arises, not by reason of their being resident magistrates, but by reason of their having served in the Constabulary, for which there is a separate pension fund?—Yes.

191. And that in the case of those men there is, I presume, a number of them; I do not know what proportion, and I do not know whether you can say what proportion, but probably by far the largest majority of them, took the position of resident magistrates, believing that they would be entitled, under the practice that had prevailed, to count for pension, their Constabulary service?—Every one of them.

192. And they took up the position of resident magistrate under the system where that was the rule?—Yes.

193. And that a real hardship is created by your Order in Council, which calls upon them to retire at 65?—Yes.

194. Otherwise they might have continued to serve on until they had worked out, as it were, at any rate, a larger pension than if they had not worked it out?—That is so.

195. As a matter of fact it was not known?—No, it was not known.

196. Those men accepted the appointment in good faith, believing that they would be entitled to count their old service?—Yes.

197. I am sorry to put even another question to you, but I am asked to do so by Mr. King, in order to make it clear. In no case, either in the covenanted service, or in the uncovenanted service in India, or in any other service even in England, where an officer had retired and taken his pension, would he be affected by this Bill?—In no case.

198. Therefore the case could not arise of a man drawing his pension concurrently with his subsequent service, that any addition could be made to his pension at the end of the time when his pension became due?—No.

Sir *Richard Temple.*

199. May I put this case: supposing an uncovenanted servant had served for 15 years in India, and comes over and serves for 20 years in England, that would make 35 years' service he then has a pension reckoned; I will not say he gets it, but reckoned upon the salary he was drawing at the end of that service in England, and he would get from you a pension upon the last 20 years?—Yes.

200. But he would get nothing for his 15 years in India, would he, under that proviso at the end of Sub-section 3?—Not unless the Secretary of State for India saw fit to pay it him.

201. But you realise that for 15 years' service he is entitled to no pension at all?—Yes.

202. Had he simply retired into private life after that 15 years' service in India he would have got nothing?—I assume that is so; I do not know.

Mr. *Storey.*

203. You said that there had been a succession of Pension Bills introduced?—Yes.

204. When was the last Bill introduced?—In 1889, 1890, and 1891 there were such Bills introduced.

205. Have you a copy of the Bill of 1891?—I have not; but I believe the clause is the same in all.

206. I want to ask whether in the method of computing the pension there was not a difference between that Bill and this?—No, I think the effect is exactly the same; but I should explain to you perhaps that the Bill of 1891 was a Bill for dealing with the whole subject of the recommendation before the Commission; that would have effected an entire change in the superannuation law.

Chairman.

207. That Bill would have applied to the whole service?—Yes, each of the previous Bills did so.

Mr. *King.*

208. Will you take it from me that no man can retire with a pension from the uncovenanted service under 30 years' service, except by medical certificate; but he can retire at any time after 10 years' service upon a medical certificate. Supposing he had retired on medical certificate and taken his pension, and then went into the English service, would that be successive service or a different service?—It would not be successive service.

Mr. Henry Waterfield, c.b., called in ; and Examined.

Chairman.

209. You are the Secretary to the Finance Department of the India Office?—I am.

210. Do you sometimes obtain the services of officers who have passed a certain time in the Imperial service in the Government of India ?—Yes, applications are made for them.

211. Is that common ?—It is not very common ; there have been in the last 20 years about a dozen cases of officers whose cases have come up for pension who have been transferred in that way.

212. When such officers have retired, the Government of India has awarded pensions, in certain cases, to them ?—Yes.

213. Are those pensions which are awarded, regulated by the Indian Pension Rules ?—By the Indian Pension Rules.

214. By which the Secretary of State and the Government of India are bound ?—Yes.

215. And in those cases has the Imperial Government been accustomed to contribute to the pension given, in proportion to the Imperial service which has been rendered ?—For a few years, from 1883 to 1887, the Imperial Government did so.

216. They did contribute, at the rate of a sixtieth, for every year's service ?—A sixtieth of the salary the officer was drawing under the British Government at the time of his transfer from its service, in respect of each year of such service.

217. The Government of India awarded the full amount of pension, and themselves paid the excess over the share borne by the Treasury ?—Yes.

218. Have you also sometimes had officers transferred from the Indian service to the Imperial service ?—Yes ; more frequently to the Colonial service ; but there have been one or two cases of transfer to the Imperial service ; in the Colonial service it is not very uncommon.

219. When you say "Colonial" do you mean cases in the self-governing colonies, like Australia ?—The first case of importance was one in the Straits Settlements. When the Colonial Office took over the government of the Straits Settlements, it became necessary to provide what pensions should be given to those officers in respect of the service they had already rendered while the Straits Settlements were under the Government of India.

220. In the case of such officers, when they finally retired, has the Government of India been accustomed to contribute to their pension ?—The Government of India agreed that in such cases it would grant from the Indian revenues a pension calculated on the a erage emoluments drawn by the officer during his last five years under the Indian Government, at the rate of 1-60th of such emoluments for each completed year of service ; but in the Indian rules there is always a maximum limit, 4,000 or 2,000 rupees according to the salary the officer has drawn.

Mr. *Craig.*

221. I should like to ask you a question I put to Mr. Mowatt. By the rule contemplated by the new Act an Indian uncovenanted civil servant taking up an English appointment after, say, 50 years of age (being then entitled to 350 *l.* per annum pension Indian) in value 1,500 *l.* per annum, and holding that appointment for five years, would be entitled to count for pension, not his Indian service on the minor scale, but his Indian and English service, as if he had been his entire service in his English appointment, and take a pension of 1,000 *l.* per annum instead of 350 *l.* Indian pension, *plus* the sum he would be entitled to at the present rate, viz., 5-60ths of 1,500 *l.* = 125 *l.* ; making a total of 475 *l.* per annum ?—So far as I can follow it, I think the calculation is right, but I think that it is a case which the Government have it completely in their hands to meet by the word, to which the Committee referred just now, "successively." If an officer willing to transfer his services from India to England at the age of 50, and being offered a very high appointment of 1,500 *l.* a-year, were to apply to be transferred, I think the Treasury would certainly say, We shall not transfer you, counting your service continuously ; you must retire from the Indian service, and we will appoint you afresh to the English service. The Government are not bound in any way to enable an officer to acquire a very large pension to which he would not be otherwise entitled. I do not think they would for a moment allow such a case to arise ; but I am not able to say, supposing the Government were desirous to do a job for the man, under such circumstances, that they could not do it. I do not say it is impossible.

222. Would you read the second Sub-section of Clause 1, and say whether that would not carry with it the obligation to pay the pension upon such a scale ?—If it were continuous service, it would give the officer a very fair claim to say that his pension should be reckoned upon the joint service ; but the Treasury are the arbiters ; it does not say that the Treasury "must" grant, but only that they "may ;" but I think that the real remedy is not to allow a transfer to take place in such a case. I may say the figures you have given are most unlikely to arise. There are very few offices in the Civil Service worth 1,500 *l.* a year, and I think no uncovenanted officer is ever likely to receive one. I can hardly conceive a case in which an uncovenanted servant who has already served 30 years in India, would be appointed to the office of Under Secretary of State, which is the kind of post that would be implied by speaking of a salary of 1,500 *l.* a year.

Mr. *King.*

223. Could the case stated by Mr. Craig arise at all, because it supposes that a man has taken a pension, and, having taken a pension, Mr. Mowatt says he would not be allowed to count his service as successive service ?—But the case, as put to me, is that a man is transferred before he took his pension.

224. The

Mr. *King*—continued.

224. Then he would not be entitled to a pension?—It is a most improbable case that a man who has already served 30 years in India (which means, I may say, more than thirty years' service, because it means qualifying service, excluding the furlough that he may have taken, so that it might represent 35 or 36 years' service) would be then appointed by the Government to a post in England carrying 1,500 *l.* a year salary.

225. Service counts from the age of 21 years in the uncovenanted service?—Yes.

226. So that he will be over 55 years of age to be in the position Mr. Craig assumes?—It does not follow that he must have served 35 or 36 years, but he must have served over 30 years.

Mr. *King*—continued.

227. In order to carry out the suggestion, the Indian Government must grant him a pension after he has been transferred to the English service?—No; the case put is where he is transferred upon continuous service, he being only entitled to 350 *l.*, but not having received it; but it is a case which I do not think it is possible could occur, and certainly the Government could meet it by calling upon the officer to retire from his Indian service one day before he was appointed to the English service.

REPORT

FROM THE

SELECT COMMITTEE

ON THE

SUPERANNUATION ACTS AMENDMENT (No. 2) BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed*,
14 *June* 1892.
